In The Matter of the Application of SAN DIEGO GAS
& ELECTRIC COMPANY (U 902 E) for a Certificate of
Public Convenience and Necessity for the Sycamore-
Penasquitos 230 Kilovolt Transmission Line Project

Application 14-04-_____

**APPLICATION OF SAN DIEGO GAS & ELECTRIC COMPANY (U 902 E)
FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY FOR THE
SYCAMORE-PENASQUITOS 230 KILOVOLT TRANSMISSION LINE PROJECT**

I. INTRODUCTION

Pursuant to Sections 1001, 1002, 1003.5 and 1004 *et seq.* of the California Public Utilities Code (P.U. Code); the California Environmental Quality Act (CEQA) of 1970, as amended (California Public Resources Code (PRC) Section 21000 *et seq.*); the CEQA Guidelines as set forth in Title 14 of the California Code of Regulations (CCR), Sections 15000, *et seq.*; General Order (GO) 131-D, and Rules 2.1, 2.2, 2.3, 2.4, 2.5 and 3.1, *et al.* of the California Public Utilities Commission (Commission) Rules of Practice and Procedures (Rules), San Diego Gas & Electric Company (SDG&E) files this Application (Application) for a Certificate of Public Convenience and Necessity (CPCN) for the Sycamore-Penasquitos 230 Kilovolt Transmission Line Project (Proposed Project). As set forth below and in the accompanying Proponent's Environmental Assessment (PEA), which is Volume II of this Application, the Proposed Project is needed to improve the reliability of the existing transmission system in the San Diego metropolitan area through the addition of a new 230 kV transmission line between the existing SDG&E Sycamore Canyon and Peñasquitos Substations. The Proposed Project involves the installation of a new 230 kV transmission line and the consolidation of two existing 69 kV power lines onto new double-circuit, steel structures that

would replace existing, predominantly wood structures. The Proposed Project is located within existing SDG&E right-of-way (ROW), where SDG&E currently maintains and operates existing electric transmission, power, distribution and substation facilities, and City of San Diego franchise position. The anticipated in-service date for the Proposed Project is May 2017. A copy of SDG&E's proposed construction schedule is attached to this Application as Appendix A. A complete project description is also included in the PEA, Section 3.0 *Proposed Project Description*, Volume II of this Application. The PEA will be referenced in this Application pursuant to GO 131-D, Section IX.B.1.e.¹

II. SUMMARY OF REQUEST

SDG&E submits this Application requesting that the Commission, upon completion of its review of this Application, issue and certify an appropriate environmental document and issue an expedited *ex parte* decision granting SDG&E a CPCN authorizing SDG&E to construct the Proposed Project set forth in this Application, PEA and the accompanying documents within the proposed timelines set forth in Section IV.A.4.d of this Application.

III. PROJECT BACKGROUND

A. Purpose

The 2012-2013 Transmission Plan (Plan) was approved by the California Independent System Operator (CAISO) Board of Governors in March 2013. This Plan identified the Sycamore-Penasquitos 230 kV Line (Project) as a reliability-driven project eligible for competitive solicitation due to policy benefits such as meeting state environmental and energy policy goals. SDG&E's Proposed Project is consistent with the CAISO's Functional

¹ Other required information for a CPCN application under the Commission's Rules of Practice and Procedure is contained in this Application or its appendices.

Specification for the Project, as described in more detail below. However, it is anticipated that the Proposed Project follows a different route and provides different benefits from competitors.

As part of the policy process, the CAISO issued a Functional Specification for the Project that stated the need for a transmission line with at least 1175 megavolt-amperes (MVA) of capacity. The purpose of the Proposed Project is to meet this capacity need by providing an additional 230 kV high-voltage outlet at Sycamore Canyon Substation. Installing this outlet would allow the delivery of power directly to the coastal load center rather than forcing it onto the 138 kV and 69 kV networks. As a result, the Project would relieve congestion on these lower-voltage facilities.

The need to provide an additional 230 kV outlet at Sycamore Canyon Substation has also been identified in both SDG&E's and the CAISO's long-term assessments of the bulk power system serving San Diego. The Project is the result of work done independently by both CAISO and SDG&E staff working toward a common goal of service reliability through compliance with mandatory standards.

For a more detailed discussion of the purpose for the Proposed Project, *see* PEA, Section 2.0 *Proposed Project Purpose and Need*, Volume II of this Application.

B. Need

The Proposed Project is needed to meet state environmental and energy policy goals, and to ensure the bulk power system is in compliance with applicable North American Electric Reliability Corporation (NERC), Western Electric Coordinating Council (WECC) and CAISO transmission planning criteria.

SDG&E's bulk electric transmission system serving the San Diego metropolitan area currently has three major gateways for energy imported to serve customer load. These include

the Miguel 500/230 kV Substation, the Sycamore Canyon 230 kV Substation, and Path 44, which is composed of three 230 kV lines from the San Onofre Nuclear Generation Station (SONGS) Switchyard to the San Luis Rey Substation and two 230 kV lines from the SONGS Switchyard to the Talega Substation).

SDG&E's ability to operate its bulk electric transmission system reliably and efficiently has become constrained, particularly at gateway substations. During periods of high customer demand and high energy imports, as well as during periods of high renewable energy generation in the Imperial Valley, most of the energy imported into San Diego flows across the 500 kV Southwest Powerlink and Sunrise Powerlink transmission lines. This imported energy then flows into the Miguel and Sycamore Canyon Substations, respectively. Heavy energy flows into these gateway substations can result in congestion and subsequent NERC reliability criteria violations on the 230 kV, 138 kV, and 69 kV transmission and power lines downstream, requiring dispatch of less efficient generation, increasing energy cost for ratepayers and eventually requiring upgrades to these downstream facilities.

SDG&E's ability to reliably and efficiently provide electric service has been further constrained by the unanticipated early retirement of the SONGS, and will be further constrained by the planned retirement of coastal Once-Through Cooling (OTC) generation units in San Diego and the western Los Angeles basin.

These system constraints are projected to worsen over time. As the San Diego metropolitan area load continues to increase, the imports into Miguel and Sycamore Canyon Substations will also increase. The California Energy Commission (CEC) has forecasted that the 1-in-10 peak customer load served by SDG&E will increase by 390 megawatts (MW) from 2013

to 2017, for a peak 2017 load of 5510 MW.² In addition, significant renewable generation is expected to be developed in the Southeastern United States, which will further increase flows on the Sunrise Powerlink and into Sycamore Canyon Substation.

For a more detailed discussion of the need for the Proposed Project, *see* PEA, Section Chapter 2.0, Volume II of this Application. Each of the Proposed Project components is more thoroughly described below.

C. Description

The Proposed Project is broken into the following primary components:

- Segment A - Construction of approximately 8.31 miles of new 230 kV transmission line on new tubular steel poles all within existing SDG&E ROW located between the existing Sycamore Canyon Substation and Carmel Valley Road;
- Segment B - Install new, approximately 2.84-mile 230 kV underground transmission line in Carmel Valley Road utilizing existing franchise position for almost the entire segment;
- Segment C - Install new 230 kV conductor on the existing 230 kV steel structures and one new tubular steel pole all within existing SDG&E ROW located between Carmel Valley Road and Peñasquitos Junction;³
- Segment D - Install new 230 kV conductor on existing double-circuit 230 kV steel lattice towers all within existing SDG&E ROW located between the Peñasquitos Junction and the existing Peñasquitos Substation; and
- Minor modifications of the existing Sycamore Canyon and Peñasquitos Substations to allow for connection of the new 230 kV transmission line.

For a more detailed discussion of the components for the Proposed Project, *see* PEA, Section 3.0, Volume II of this Application.

² Revised California Energy Demand Forecast, 2012-2022, Mid Case, published February 2012.

³ The Peñasquitos Junction refers to confluence of existing electric power and transmission lines where existing power lines TL 13804, TL 6920, and TL 675 turn from a north/south alignment and travel west into the Peñasquitos Substation.

IV. PUBLIC UTILITIES CODE SECTION 1002

P.U. Code Section 1002(a) provides that “[t]he Commission, as a basis for granting any certificate pursuant to section 1001 shall give consideration to the following factors:

1. Community values
2. Recreational and park areas
3. Historical and aesthetic value
4. Influence on the environment . . .”⁴

The Proposed Project has been designed in consideration of community values, recreational and park areas, historical and aesthetic value, and influence on the environment. SDG&E addresses each of these factors below.

A. Community Values

The Proposed Project will result in substantial electric service and reliability benefits. These benefits include increased electric network reliability, increased capacity for project load growth in the San Diego metropolitan area, and reduction of risk of a potential system-wide outage affecting all of San Diego Gas & Electric Company’s (SDG&E’s) customers and substations in the San Diego County area. The Proposed Project will enhance electric service reliability, modify existing substations to allow for an additional 230 kilovolt (kV) high voltage outlet, and accommodate future customer load growth in the San Diego metropolitan area by allowing the delivery of power directly to the coastal load center rather than forcing it onto the existing 138 kV and 69 kV networks, which would relieve congestion on existing lower-voltage facilities. Additionally, the Proposed Project is one of the power system upgrades that would be needed due to the recently announced permanent retirement of the San Onofre Nuclear

⁴ Public Utilities Code Section 1002(a).

Generating Station (SONGS) after an unplanned, yearlong closure. These electric service benefits, which are explained more fully in PEA Section 2.0, Volume II of this Application, will directly benefit communities within SDG&E's San Diego metropolitan service territory.

In addition to the substantial electric service benefits, the Proposed Project will increase fire safety. Although not a fundamental objective of the Proposed Project, this benefit will be achieved by replacing existing wood structures with steel structures. The Proposed Project will also reduce the number of overhead electric facilities within specific locations along the Proposed Project, including a project-wide net reduction of approximately 10 overhead electric structures.

SDG&E has designed the Proposed Project to provide these benefits by replacing existing facilities located within existing rights-of-way (ROW), utility-owned property, and franchise position in the City of San Diego. All of the proposed new facilities are located within existing SDG&E ROW and substation properties with only minor amendments to existing ROWs required to implement the Proposed Project, thereby minimizing impacts on the community. SDG&E has rejected alternatives that would require the acquisition of additional ROW or result in increased construction-related impacts and potentially significant impacts to various sensitive resources.

Due to the uncertain nature of the CAISO's 2012-2013 Transmission Planning Process Competitive Solicitation for the Proposed Project, SDG&E has not yet conducted outreach to the general public. However, SDG&E has been communicating with local elected officials, and other governmental, cultural and federal agencies as described in PEA Section 1.7 *Inter-Agency and other Consultations*, Volume II of this Application.

On March 4, 2014,⁵ the CAISO selected SDG&E as the Project Sponsor for the new Sycamore to Peñasquitos 230 kV transmission line. The CAISO determined that SDG&E’s proposal to construct and operate the Proposed Project to meet the CAISO’s identified new 230 kV connection between the existing Sycamore Canyon and Peñasquitos Substations was the best proposal submitted for CAISO consideration. The CAISO reviewed proposals from four prospective bidders to construct a new 230 kV transmission line between the existing Sycamore Canyon and Peñasquitos Substations. The CAISO conducted a detailed review of these proposals, including a comparative analysis of the four proposed projects. On March 4, 2014, the CAISO officially selected the SDG&E’s Proposed Project. Of particular note, the CAISO determined that the Proposed Project was more favorable with respect to all six of the following key selection factors specified in the CAISO’s April 15, 2013 presentation to stakeholders, entitled Transmission Planning Process Phase 3 Competitive Solicitation:

1. Overall capability to finance, license, construct, operate, and maintain the facility (tariff section 24.5.2.4[a]).
2. Possession of existing ROW that could contribute to the project (24.5.2.4[b]).
3. Experience in acquiring ROW to facilitate approval and construction of the project (24.5.2.4[c]).
4. Proposed schedule and demonstrated ability to meet that schedule (24.5.2.4[d]).
5. Environmental permitting and engineering qualifications and experience (24.5.2.4[f]).
6. Demonstrated cost containment capability (tariff section 24.5.2.4[j]).

⁵ The California Independent System Operator selected SDG&E’s proposal to construct and operate the Proposed Project following their 2012-2013 Transmission Plan Competitive Solicitation Process (CAISO Sycamore-Penasquitos Project – Project Sponsor Selection Report [March 4, 2014]).

To assure consideration of community values in this proceeding, SDG&E will implement a comprehensive Public Education, Outreach and Communications Plan with respect to the Proposed Project. This public outreach and community participation program has been designed to ensure that the community and larger public including residents, business owners and other stakeholders along the Proposed Project route have access to accurate information about the Proposed Project approval phase and construction activities, and have opportunities to provide constructive input and comment on the Proposed Project. SDG&E will initiate the Public Education, Outreach and Communications Plan following submittal of the CPCN and efforts will continue during the Commission's review of the CPCN.

SDG&E will work with the community to address any concerns and, consistent with the CEQA, the Proposed Project has been designed to avoid, minimize, and/or mitigate all of the potential environmental impacts to the extent feasible. SDG&E has developed project-specific Applicant Proposed Measures (APMs) to minimize impacts on the community, as summarized in PEA Section 3.9 *Applicant Proposed Measures*, and discussed throughout PEA Section 4 *et seq*, Volume II of this Application. In addition, SDG&E has proposed to phase construction activities to minimize impacts and disruption to the community.

B. Recreational and Park Areas

The Proposed Project will take place almost entirely within the footprint of existing ROW, utility corridors, and substation facilities and will not introduce electric facilities uses where none currently exist, with the exception of the underground transmission line segment of the Proposed Project that would be installed within Carmel Valley Road (franchise position of the City of San Diego). Recreational and park areas within the Proposed Project site already include extensive overhead electric transmission and distribution facilities. These existing

facilities will be replaced with new facilities, with a project-wide reduction of approximately 10 overhead structures. In addition, operation of the Proposed Project will not increase or otherwise affect the use of the recreational/park areas. In fact, operation and maintenance activities along the existing overhead portions of the Proposed Project Alignment (Segments A and D as described *supra*) would likely decrease compared to existing conditions due to the installation of newer, steel structures that would require less maintenance.

Although the Proposed Project would result in minor temporary impacts within recreational and park areas during construction, the Proposed Project would not result in any material permanent impacts on recreational or park areas. PEA Sections 4.12 *Public Services*, and 4.13 *Recreation*, Volume II of this Application, conclude that the Proposed Project would not result in any significant adverse impacts to recreational or park areas. Additionally, APMs PS-1 through PS-5 have been included to minimize potential impacts to parks, trails and recreational facilities during construction activities.

Within Black Mountain Ranch Community Park, located at the eastern transition of the underground and overhead transmission line segment along Carmel Valley Road, a portion of the park within the immediate construction area may be closed temporarily for safety reasons. The access driveway off Carmel Valley Road to the park would also be closed to vehicular traffic during trenching; however, the park will remain open for use. The Torrey Hills Dog Park located east of the Peñasquitos Substation and completely within existing ROW could also be temporarily closed to the public for safety reasons. Impacts to other recreation and park areas, including locations that provide trailhead access for Los Peñasquitos Canyon Preserve, Del Mar Mesa Preserve, and Black Mountain Open Space will be temporary and intermittent and would entail restricted access only.

C. Historical and Aesthetic Values

SDG&E has fully considered the Proposed Project's potential impacts on historical and aesthetic values.

Historical Values

As discussed in PEA Section 4.5 *Cultural Resources*, Volume II of this Application, the Proposed Project will not impact historical resources. The PEA identified 37 potential historical resources located within or adjacent to the Proposed Project area. Twenty-three of these resources have been deemed not eligible for the National Register of Historic Properties (NRHP)/California Register of Historic Resources (CRHR). The other 14 sites have not been evaluated for historical significance and may qualify as historical resources as identified in CEQA Guidelines Section 15064.5(a).

The current design is far enough from these resource locations that no direct impacts are anticipated to occur, with the implementation of APMs CUL-1 through CUL-6. With the implementation of these APMs, any possible potential impacts to such historical resources would remain less than significant.

Aesthetic Values

SDG&E has designed the Proposed Project to be located entirely within an existing electric transmission corridor and substation sites, and franchise position of the City of San Diego. Thus, the Proposed Project has been located within the appropriate environmental setting – within and immediately adjacent to existing electric transmission, power, and substation facilities – to ensure that local and regional aesthetic values are preserved.

PEA Section 4.1 *Aesthetics*, Volume II of this Application, confirms that the Proposed Project will have no significant adverse environmental impacts on aesthetic resources including

scenic vistas, designated scenic highways, and overall visual character. Specifically, the PEA confirms that the Proposed Project would not substantially damage scenic resources within a State Scenic Highway or scenic vista, would not create a new source of substantial light or glare, and would not substantially degrade the existing visual character or quality of the Proposed Project area.

Within the approximately 13.9-mile overhead transmission line corridor and 2.8 mile underground segment within Carmel Valley Road, the Proposed Project will reduce the overall number of overhead structures by approximately 10 structures. Although the replacement structures are taller than the existing structures, the proposed new poles would be comparable to the height of existing structures within the same corridor, and the conductor catenaries would more closely match those of the existing lines. Visual simulations that portray the appearance of the proposed structures as well as the existing views are provided within PEA Section 4.1, Volume II of this Application.

D. Influence on Environment

SDG&E proposes to replace and expand existing facilities located entirely within an existing electric transmission corridor, utility ROW and substation sites, and franchise position. The Proposed Project location and alignment minimizes the potential for adverse effects on the environment through the utilization of existing ROW, existing franchise position (city streets), existing access roads and spur roads, and existing overhead electric structures (tubular steel poles and lattice towers).

Moreover, SDG&E proposes to construct, operate and maintain the Proposed Project consistent with its robust environmental compliance program. SDG&E's standard practices and protocols include comprehensive protections for biological resources (through

compliance with SDG&E’s Natural Community Conservation Plan [NCCP]), water quality (through implementation of SDG&E’s Water Quality Construction Best Management Practices Manual), fire prevention and fire safety standards (through adherence to SDG&E’s Electric Standard Practice and the preparation and implementation of a project specific fire plan), and other environmental procedures and protocols identified in the PEA (refer to PEA Sections 3.8 *Project Design Features and Ordinary Construction/Operating Restrictions*, and 3.9, Volume II of this Application).

As described in the PEA, the Proposed Project will not result in any sort of long-term unavoidable significant adverse impacts on the human or natural environment. The Proposed Project would result in less-than-significant, mainly short-term impacts. SDG&E has incorporated APMs and will abide by standard construction/operating restrictions, all of which will avoid, minimize, or mitigate these impacts to the extent feasible and below the threshold of significance.

V. STATUTORY AND PROCEDURAL REQUIREMENTS

GO 131-D, Section IX.A. requires an applicant for a CPCN to comply with the Commission’s Rules of Practice and Procedure, Rule 2. Pursuant to this requirement, SDG&E responds as follows:⁶

A. Rule 2.1(a) – (c)

In accordance with Rule 2.1(a) – (c) of the Commission’s Rules of Practice and Procedure, SDG&E provides the following information.

⁶ Although not specifically discussed herein, SDG&E’s Application also complies as necessary to Rule 1.5 (“Form and Size of Tendered Documents”), Rule 1.13 (“Tendering and Review of Document for Filing”), Rule 7.1 (“Categorization, Need for Hearing”), Rule 8.1 (“Definitions”), Rule 8.3 (“Ex Parte Requirements”), Rule 13.3 (“Assigned Commissioner Presence”), and Rule 13.13 (“Oral Argument before Commission”).

1. Statutory Authority

This Application is made pursuant to P.U. Code 1001 *et seq.*, the CEQA, GO 131-D, the Commission's Rules of Practice and Procedure, and prior decisions, orders and resolutions of this Commission.

2. Rule 2.1(a) - Legal Name and Address

The applicant is San Diego Gas & Electric Company, a corporation organized and existing under the laws of the State of California, and an investor-owned public utility as defined by Section 216 (a) and 218 (a), respectively, of the California Public Utilities Code, and engaged in the business of purchasing, generating, transmitting, distributing, and selling electric and gas energy to approximately 3.4 million consumers through 1.4 million electric meters and more than 840,000 natural gas meters throughout San Diego County and in a portion of South Orange County, California. The activities of SDG&E are regulated by this Commission and by the Federal Energy Regulatory Commission (FERC). SDG&E is a wholly-owned, indirect subsidiary of Sempra Energy, whose shares are publicly traded. SDG&E's principal place of business is 8330 Century Park Court, San Diego, California 92123.

3. Rule 2.1(b) - Correspondence

Correspondence or communications regarding this Application should be addressed to:

ALLEN K. TRIAL
Attorney for:
SAN DIEGO GAS & ELECTRIC COMPANY
101 Ash Street, HQ12B
San Diego, CA 92101
Tel: (619) 699-5162
Fax: (619) 699-5027
ATrial@semprautilities.com

with copies to:

REBECCA GILES
Regulatory Case Manager
San Diego Gas & Electric Company
8330 Century Park Court, CP32D
San Diego, CA 92123
Tel: (858) 636-6876
Fax: (858) 654-1788
RGiles@semprautilities.com

4. Rule 2.1(c)

a. Proposed Category of Proceeding

In accordance with Rules 2.1 and 7.1, SDG&E requests that this Application be categorized as a “ratesetting” proceeding within the meaning of Rule 1.3(e) because the costs for the new substation project will be recovered by SDG&E through its retail rates, and because this Application neither raises questions of policy or rules of general applicability, nor adjudicates any allegations of violations of law. In addition, because this Application raises ancillary issues that do not fall clearly into a single category, Rule 7.1(e)(2) requires that it be categorized as a ratesetting proceeding.

b. Need for Hearings

SDG&E does not believe that approval of this Application will require hearings. SDG&E has provided ample information, analysis and documentation that provide the Commission with a sufficient record upon which to grant the relief requested on an *ex parte* basis. An *ex parte* grant of the authorization sought herein at the earliest achievable date will permit SDG&E to proceed with the project in accordance with a 12 month timeline as provided for in G.O. 131-D, Section IX.A. If the Commission finds that hearings are necessary, SDG&E respectfully requests that that such hearings be concluded as soon as practicable.

c. Issues to be Considered

The issues to be considered are described in this Application, PEA and the accompanying documents. Based on the PEA, SDG&E believes the Proposed Project will not have any long-term significant adverse impact on the environment. Therefore, SDG&E requests that the Commission issue a decision within the time limits prescribed by Cal. Gov. Code § 65920 *et seq.* (Permit Streamlining Act) as provided for in G.O. 131-D, Section IX, Subsection A.2.

d. Proposed Schedule

This proceeding involves the Commission's: (1) environmental review of the Proposed Project in compliance with the CEQA (Public Resources Code Section 21100 *et seq.*) and GO 131-D; and (2) issuance of a CPCN authorizing SDG&E to construct the Proposed Project. SDG&E is unaware of any specific objections any party might raise to any of these issues. In this regard, SDG&E proposes the following schedule:

<u>ACTION</u>	<u>DATE</u>
Application filed	April 7, 2014
Provide Notice of Filing of Application by direct mail, advertisement and on-site posting	April 17, 2014 (Within 10 days after filing)
File a Declaration of Mailing and Posting	May 2014 (Within 5 days of completion)
Application Completeness Determination	May 7, 2014 (30 days after Application filed)
Last Date for Protest and Request for Public Hearings	May 7, 2014 (30 days after notice ⁷)
Draft CEQA Document Issued for Public Comment	August 22, 2014 (105 days)
Close of Public Comment Period	October 6, 2013 (45 days after notice of availability)
Proposed Date for Release of Final EIR or Negative Declaration	December 2014
Draft Decision Issued	January 2015
<i>Ex Parte</i> Decision Issued. Final CEQA Document Certified	March 2015

B. Rule 2.2 – Articles of Incorporation

A copy of SDG&E’s Restated Articles of Incorporation as last amended, presently in effect and certified by the California Secretary of State, was filed with the Commission on

⁷ GO 131-D, Section XII. provides in part that any person entitled under the Commission’s Rules of Procedure to participate in a proceeding for a permit to construct may, within 30 days after the notice was mailed or published (as provided under Section XI. of GO 131-D), object to the granting in whole or in part of the authority sought by the utility and request that the Commission hold hearings on the application.

August 31, 2009 in connection with SDG&E's Application No. 09-08-019, and is incorporated herein by reference.

C. Rule 2.3 – Financial Statement

Although SDG&E is not seeking a rate change in this Application, SDG&E provides a copy of its financial statement, balance sheet and income statement for the nine-month period ending September 30, 2013 with this Application as Appendix I.

D. Rule 2.4 - CEQA Compliance

GO 131-D, Section IX.A.1.h. requires an applicant for a CPCN to include in its Application “[a] PEA or equivalent information on the environmental impact of the project in accordance with the provisions of CEQA and this Commission’s Rules of Practice and Procedure”. SDG&E has prepared a PEA describing in detail the environmental setting and the potential impacts associated with the construction and operation of the Proposed Project. SDG&E is submitting the PEA simultaneously with this Application as Volume II.

E. Rule 2.5 – Fees for Recovery of Cost in Preparing EIR

SDG&E is submitting a deposit under separate cover to be applied to the cost the Commission incurs to prepare a negative declaration or an environmental impact report for the Proposed Project.

F. Rule 3.1(a) – (i) – Construction or Extension of Facilities

Rule 2.1(d) requires all applications to comply with “[s]uch additional information as may be required by the Commission in a particular proceeding.” Commission Rule 3.1 contains some additional requirements for applications under P.U. Code Section 1001 to construct or extend facilities. Some of the requirements of Rule 3.1 are duplicative of the requirements of GO 131-D, which are more precisely identified and discussed in Section VI *infra*. In accordance

with Rule 3.1(a) – (i) of the Commission’s Rules of Practice and Procedure, SDG&E provides the following information.

1. Rule 3.1(a) – Description of the Proposed Project

Commission Rule 3.1(a) requires applicants for a CPCN to include in their applications “A full description of the proposed construction or extension, and the manner in which the same will be constructed.”

Please refer to SDG&E’s response in Section III-C *supra* of this Application. For a more detailed description of the Proposed Project, *see* PEA Section 3.0, Volume II of this Application.

2. Rule 3.1(b) – Competing Utilities

Commission Rule 3.1(b) requires applicants for a CPCN to include in their applications “The names and addresses of all utilities, corporations, persons or other entities, whether publicly or privately operated, with which the proposed construction is likely to compete, and of the cities or counties within which service will be rendered in the exercise of the requested certificate.”

The Proposed Project will be built entirely within the service territory of SDG&E, and is not intended to compete with the projects of any other entity. The requested certification is to enhance electric service within SDG&E’s service territory (which consists of San Diego County and a portion of South Orange County, including but not necessarily limited to, the Cities of Aliso Viejo, Carlsbad, Chula Vista, Coronado, Dana Point, Del Mar, El Cajon, Encinitas, Escondido, Imperial Beach, Laguna Beach, Laguna Hills, Laguna Niguel, La Mesa, Lemon Grove, Mission Viejo, National City, Oceanside, Poway, San Clemente, San Diego, San Juan Capistrano, San Marcos, Santee, Solana Beach and Vista) and in the area served by the CAISO.

3. Rule 3.1(c) – Project Maps

Commission Rule 3.1(c) requires an applicant for a CPCN to include in its application “A map of suitable scale showing the location or route of the proposed construction or extension, and its relation to other public utilities, corporations, persons, or entities with which the same is likely to compete.”

As stated in the previous response, the Proposed Project is not intended to compete with the projects of any other entity. Maps showing the locations under consideration for the project are included in the PEA, Sections *1.0 PEA Summary*, *3.0 Proposed Project Description* and Appendix 3-B, Volume II of this Application.

4. Rule 3.1(d) – Required Permits

Commission Rule 3.1(d) requires an applicant for a CPCN to include in its application “A statement identifying the franchises and such health and safety permits as the appropriate public authorities have required or may require for the proposed construction or extension.”

A list of the franchises and anticipated health and safety permits required for the Proposed Project is found in the PEA, Section *3.0*, Volume II of this Application.

5. Rule 3.1(e) – Public Convenience and Necessity

Commission Rule 3.1(e) requires an applicant for a CPCN to include in its application “Facts showing that public convenience and necessity require, or will require, the proposed construction or extension, and its operation.”

Please refer to SDG&E’s response in Sections III-A and III-B *supra* of this Application. For a more detailed discussion of the public convenience and necessity for the Proposed Project, *see* PEA Section *2.0*, Volume II of this Application.

6. Rule 3.1(f) – Estimated Cost

Commission Rule 3.1(f) requires an applicant for a CPCN to include in its application “A statement detailing the estimated cost of the proposed construction or extension and the estimated annual costs, both fixed and operating associated therewith.”

SDG&E provides the estimated cost for the Proposed Project in the PEA, Section 3.0, Volume II of this Application, at Section 3.4, Table 3-1, page 3-5.

7. Rule 3.1(g) – Financial Ability

Commission Rule 3.1(g) requires an applicant for a CPCN to include in its application “Statements or exhibits showing the financial ability of the applicant to render the proposed service together with information regarding the manner in which applicant proposes to finance the cost of the proposed construction or extension.”

SDG&E plans to own 100 percent of the assets that will comprise the Project and those assets will be added to SDG&E’s utility rate base. At present, SDG&E intends to finance the Project cost with the same proportions of debt and equity with which all other rate base assets are financed, in keeping with the capital structure approved by the Commission for SDG&E. Financing would be in the form of retained earnings,⁸ available cash and debt, as necessary.⁸

⁸ It should be noted that SDG&E entered into a nonbinding Letter of Intent with Citizens Energy Corporation (Citizens) on May 13, 2013 under which Citizens may fund a portion of the Project costs and lease from SDG&E certain entitlements in the Project. As contemplated under the Letter of Intent, SDG&E would grant an option to Citizens to lease 50% of the transfer capability on the segment of the Project consisting of the 230 kV underground circuit along Carmel Valley Road. The transaction is expected to be similar to SDG&E’s existing Transfer Capability Lease with Citizens Sunrise Transmission LLC concerning a segment of the Sunrise Powerlink Project. Similar to that Sunrise transfer capability lease, this transfer capability lease would be for 30 years with all rent prepaid upon execution. In general, Citizens would seek cost recovery in its rates for the costs it incurs in connection with the transfer capability lease (largely, the prepaid rent), and SDG&E would deduct from its rates any cost recovery for the prepaid rent it receives from Citizens. Should the Letter of Intent lead to definitive agreements between SDG&E and Citizens, SDG&E intends to seek Commission approval of the transfer capability lease under P.U. Code §851, as it did for the Sunrise Powerlink lease.

SDG&E's ability to fund the Proposed Project is demonstrated through its financial statement, which is included with this Application as part of Appendix I.

8. Rule 3.1(h) – Proposed Rates

Commission Rule 3.1(h) requires an application for a CPCN to include “A statement of the proposed rates to be charged for service to be rendered by means of such construction or extension.”

SDG&E's retail rates are found in its currently-effective tariffs approved by this Commission. SDG&E's transmission rates are formula rates subject to annual adjustment, as approved by the FERC. SDG&E is not proposing this Commission modify its currently-effective tariffs as a result of this Project.

The costs associated with the Proposed Project are predominantly for transmission-related services. When the project is placed in service, SDG&E will seek to recover the costs through the CAISO's FERC-jurisdictional rates. This would occur as part of a FERC rate case covering the test period in which the project will become operative. Costs not approved by FERC for recovery in general transmission rates may be recovered through the Commission's jurisdictional retail rates.

SDG&E submits this Application for a CPCN with the condition that there must be a clear cost recovery mechanism before SDG&E commences construction. This filing is contingent upon a Commission order in this proceeding, which explicitly establishes that, pursuant to Pub. Util. Code Section 399.2.5, SDG&E can recover through the Commission's

jurisdictional rates all reasonable costs associated with the Proposed Project prudently incurred by SDG&E that the FERC does not allow SDG&E to recover in general transmission rates.⁹

9. Rule 3.1(i) – Proxy Statement

Commission Rule 3.1(i) requires an applicant for a CPCN to include in its application “a copy of the latest proxy statement sent to stockholders by it or its parent company containing the information required by the rules of the SEC if not previously filed with the Commission.”

A copy of SDG&E’s most recent proxy statement, dated April 25, 2013, as sent to all shareholders of SDG&E’s Parent Company, Sempra Energy, was mailed to the Commission on April 30, 2013, and is incorporated herein by reference.

VI. INFORMATION REQUIRED BY GENERAL ORDER 131-D

GO 131-D, Sections IX., X. and XI., adopted by the Commission in D.94-06-014 as modified by D.95-08-038, requires an applicant for a CPCN to include in its application a variety of information. This information follows in the order in which it is listed in GO 131-D.

A. Section IX.A.

In accordance with Section IX.A.1.(a) – (h) of the Commission’s GO 131-D, SDG&E provides the following information.

1. Section IX.A.1.a. - Description of the Proposed Project facilities

Please refer to SDG&E’s response in Section III-C *supra* of this Application. For a more detailed description of the Proposed Project, *see* PEA Section 3.0, Volume II of this Application.

⁹ Specifically, SDG&E’s Transmission Revenue Requirement (TRR) and CAISO’s Transmission Access Charge (TAC).

2. Section IX.A.1.b. - Map of Proposed Project location

A copy of SDG&E's Map of the proposed routing is attached to this Application as Appendix F. For a more detailed description of the Proposed Project location, *see* PEA, Section 3.0, Volume II of this Application.

3. Section IX.A.1.c. – Facts Showing Public Convenience and Necessity

Please refer to SDG&E's response in Sections III-A and III-B *supra* of this Application. For a more detailed discussion of the public convenience and necessity for the Proposed Project, *see* PEA, Section 2.0, Volume II of this Application.

4. Section IX.A.1.d. – Estimated Costs of the Proposed Project facilities

See PEA, Section 3.0, Volume II of this Application, at Section 3.4, Table 3-1, page 3-5.

5. Section IX.A.1.e. - Reasons for Adoption of the Transmission and Power Line Routes or Substation Locations Selected

See PEA, Section 2.0, Volume II of this Application.

6. Section IX.A.1.f. – Proposed Schedule for Right-of-Way Acquisition

A copy of SDG&E's proposed schedule for right-of-way acquisition is attached to this Application as Appendix G.

7. Section IX.A.1.g. - Listing of Governmental Agencies Consulted and Statements of Position

See PEA, Section 1.0 and Appendix 1-A, Volume II of this Application.

8. Section IX.A.1.h. – Proponent's Environmental Assessment

The California Public Utilities Commission has adopted this "Information and Criteria List" in order to determine whether applications for projects are complete. This list specifies the information required from any applicant for a project subject to the CEQA, Cal. Pub. Res. Code

Secs. 21000 through 21176, or for a development project subject to Cal. Gov. Code Secs. 65920 through 65957.

The PEA attached to this Application as Volume II includes the information described in Section IX.A.1.(a) – (h) of the Commission’s GO 131-D, as described above, and concludes that the Proposed Project will have no significant unmitigable impact on the environment.

B. Section X.A.

GO 131-D, Section X.A. requires an applicant for a CPCN to “describe the measures taken or proposed by the utility to reduce the potential exposure to electric and magnetic fields generated by the proposed facilities, in compliance with Commission order.”

A copy of SDG&E’s Magnetic Field Management Plan is attached to this Application as Appendix H.

C. Section XI.A.

GO 131-D, Section XI.A. requires an applicant for a CPCN to notify the public of its filing “within ten days of filing the application” in several different ways, by direct mail, by advertisement and by posting.

A copy of SDG&E’s Draft Notice of Application is attached to this Application as Appendix B. See also, SDG&E’s Service List and Public Review Locations for Notice of Application, attached to this Application as Appendix C, the List of Newspaper(s) Publishing the Notice of Application, attached to this Application as Appendix D, and Draft Declaration of Posting of Notice, attached to this Application as Appendix E.

VII. LIST OF APPENDICES AND ATTACHMENTS

- Appendix A Proposed Construction Schedule
- Appendix B Draft Notice of Application
- Appendix C Service List and Public Review Locations for Notice of Application
- Appendix D List of Newspaper(s) Publishing the Notice of Application
- Appendix E Draft Declaration of Posting of Notice
- Appendix F Map of Proposed Project Location
- Appendix G Proposed Schedule for Right-of-Way
- Appendix H Magnetic Field Management Plan
- Appendix I Financial Statements
- Volume II Proponent's Environmental Assessment

VIII. CONCLUSION

Wherefore, SDG&E requests that the Commission (1) accept its application as complete; (2) prepare an Environmental Impact Report regarding the potential environmental impacts of the Proposed Project; and (3) issue an expedited *ex parte* decision granting SDG&E a Certification of Public Convenience and Necessity for the Sycamore-Penasquitos 230 Kilovolt Transmission Line Project, as described in this Application and the supporting documents.

DATED this 7th day of April 2014 at San Diego, California.

Respectfully submitted,

SAN DIEGO GAS & ELECTRIC COMPANY

IX. VERIFICATION

David L. Geier declares the following:

I am an officer of San Diego Gas & Electric Company and am authorized to make this Verification on its behalf. I am informed and believe that the matters stated in the foregoing **APPLICATION OF SAN DIEGO GAS & ELECTRIC COMPANY (U 902 E) FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY FOR THE SYCAMORE-PENASQUITOS 230 KILOVOLT TRANSMISSION PROJECT** are true to my own knowledge, except as to matters which are therein stated on information and belief, and as to those matters I believe them to be true.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

Executed this 7th day of April 2014, at San Diego, California.

DAVID L. GEIER
Vice President, Electric Operations

SAN DIEGO GAS & ELECTRIC COMPANY

APPENDIX B
Draft Notice of Application

**NOTICE OF APPLICATION
FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY**

Sycamore to Penasquitos 230 kV Line Project

Date: April 7, 2014

CPUC Application No.: 14-04-XXX

Proposed Project: San Diego Gas & Electric (SDG&E) proposes to construct and operate a new 230 kilovolt (kV) transmission line between the existing Sycamore Canyon and Peñasquitos Substations. The Proposed Project is located within existing SDG&E right-of-way (ROW), where SDG&E currently maintains and operates existing electric transmission, power, distribution and substation facilities, and City of San Diego franchise position. Specifically, the Proposed Project would include the following primary components:

- Construction of approximately 8.31 miles of new 230 kV transmission line on new tubular steel poles all within existing SDG&E ROW located between the existing Sycamore Canyon Substation and Carmel Valley Road;
- Install new, approximately 2.84-mile 230 kV underground transmission line in Carmel Valley Road utilizing existing franchise position for almost the entire segment³;
- Install new 230 kV conductor on the existing 230 kV steel structures and one new tubular steel pole all within existing SDG&E ROW located between Carmel Valley Road and Peñasquitos Junction;
- Install new 230 kV conductor on existing double-circuit 230 kV steel lattice towers all within existing SDG&E ROW located between the Peñasquitos Junction and the existing Peñasquitos Substation; and
- Minor modifications of the existing Sycamore Canyon and Peñasquitos Substations to allow for connection of the new 230 kV transmission line.

Environmental Assessment: SDG&E has prepared a PEA that includes an analysis of potential environmental impacts created by the construction and operation of the Proposed Project. The Proposed Project replaces and relocates existing electric transmission and power line facilities within existing utility corridors. The Proposed Project also adds one new transmission line that will also be located within existing utility corridors and within franchise position. The existing electric transmission, power, distribution and substation facilities constitute the existing setting and baseline from which the potential impacts of the Proposed Project were analyzed. The PEA concludes that in twelve resource areas, construction of the Proposed Project would not have environmental impacts or would experience only less than significant impacts due to the Proposed Project and four resource areas would result in potentially significant impacts that can be reduced to a level less than significant with the incorporation of Applicant Proposed Measures (APMs).

No significant long term impacts were identified resulting from operation and maintenance of the Proposed Project.

Electric and Magnetic Fields (EMF) Management: SDG&E will employ measures to reduce public exposure to EMF in accordance with CPUC Decisions 93-11-013 and 06-01-042 and SDG&E's "EMF Design Guidelines for Transmission, Distribution, and Substation Facilities." SDG&E has filed copies of its Magnetic Field Management Plan for this Proposed Project as part of its Application.

Public Review Process: SDG&E has applied to the California Public Utilities Commission (CPUC) for a Certificate of Public Convenience and Necessity and has asked for approval without hearings. Pursuant to the CPUC's Rules of Practice and Procedure, within 30 calendar days of the date of notice that this Application appears in the CPUC calendar, you may protest and request that the CPUC hold hearings on this Application. If the CPUC, as a result of its investigation, determines that public hearings should be

held, notice shall be sent to each person or entity who is entitled to notice or who has requested a hearing. Please contact the following people should you require any information regarding this project.

Allen K. Trial Attorney for SDG&E 101 Ash Street, HQ12 San Diego, CA 92101	AND	Rebecca W. Giles SDG&E Regulatory Affairs 8330 Century Park Court, CP 32D San Diego, CA 92123	Ed Randolph Director, Energy Division California Public Utilities Commission 505 Van Ness Avenue San Francisco, CA 94102
---	-----	---	---

CPUC PROCESS

If you would like additional information on the CPUC process or would like to attend hearings (if held) and need assistance, you can contact the Public Advisor's Office (PAO). You may also send your comments to the PAO at the following address: Public Advisor's Office, 505 Van Ness Avenue, San Francisco, CA 94102 or send e-mail to public.advisor@cpuc.ca.gov. Any letters received from you will be circulated to each Commissioner and will become part of the formal correspondence file in the application. In your letter, state that your comments are regarding Application No. A.14-04-XXX.

FOR FURTHER INFORMATION

You may request additional information or obtain a copy of the application and related exhibits by writing to: Rebecca W. Giles, Regulatory Case Manager for SDG&E, 8330 Century Park Court, San Diego, CA 92123. SDG&E will provide a copy of the application, including the public testimony, upon request. SDG&E's application and attachments may be inspected at the CPUC's Central Files Office, 505 Van Ness Ave., San Francisco, CA 94102. A copy of the application and any amendments may be inspected at the SDG&E business offices listed below:

Draft Declaration of Posting of Notice

DECLARATION OF POSTING (DRAFT)

I, _____, am the Project Manager responsible for overseeing various aspects of substation, transmission, and distribution projects for San Diego Gas & Electric Company. On _____, 2014, I posted along the project site for the proposed San Diego Gas & Electric Company's Sycamore to Penasquitos 230 kV Line Project with the Notice of Filing of an Application for a Certificate of Public Convenience and Necessity filed with the California Public Utilities Commission, in accordance with the provisions of General Order 131-D, Section XI.A.3.

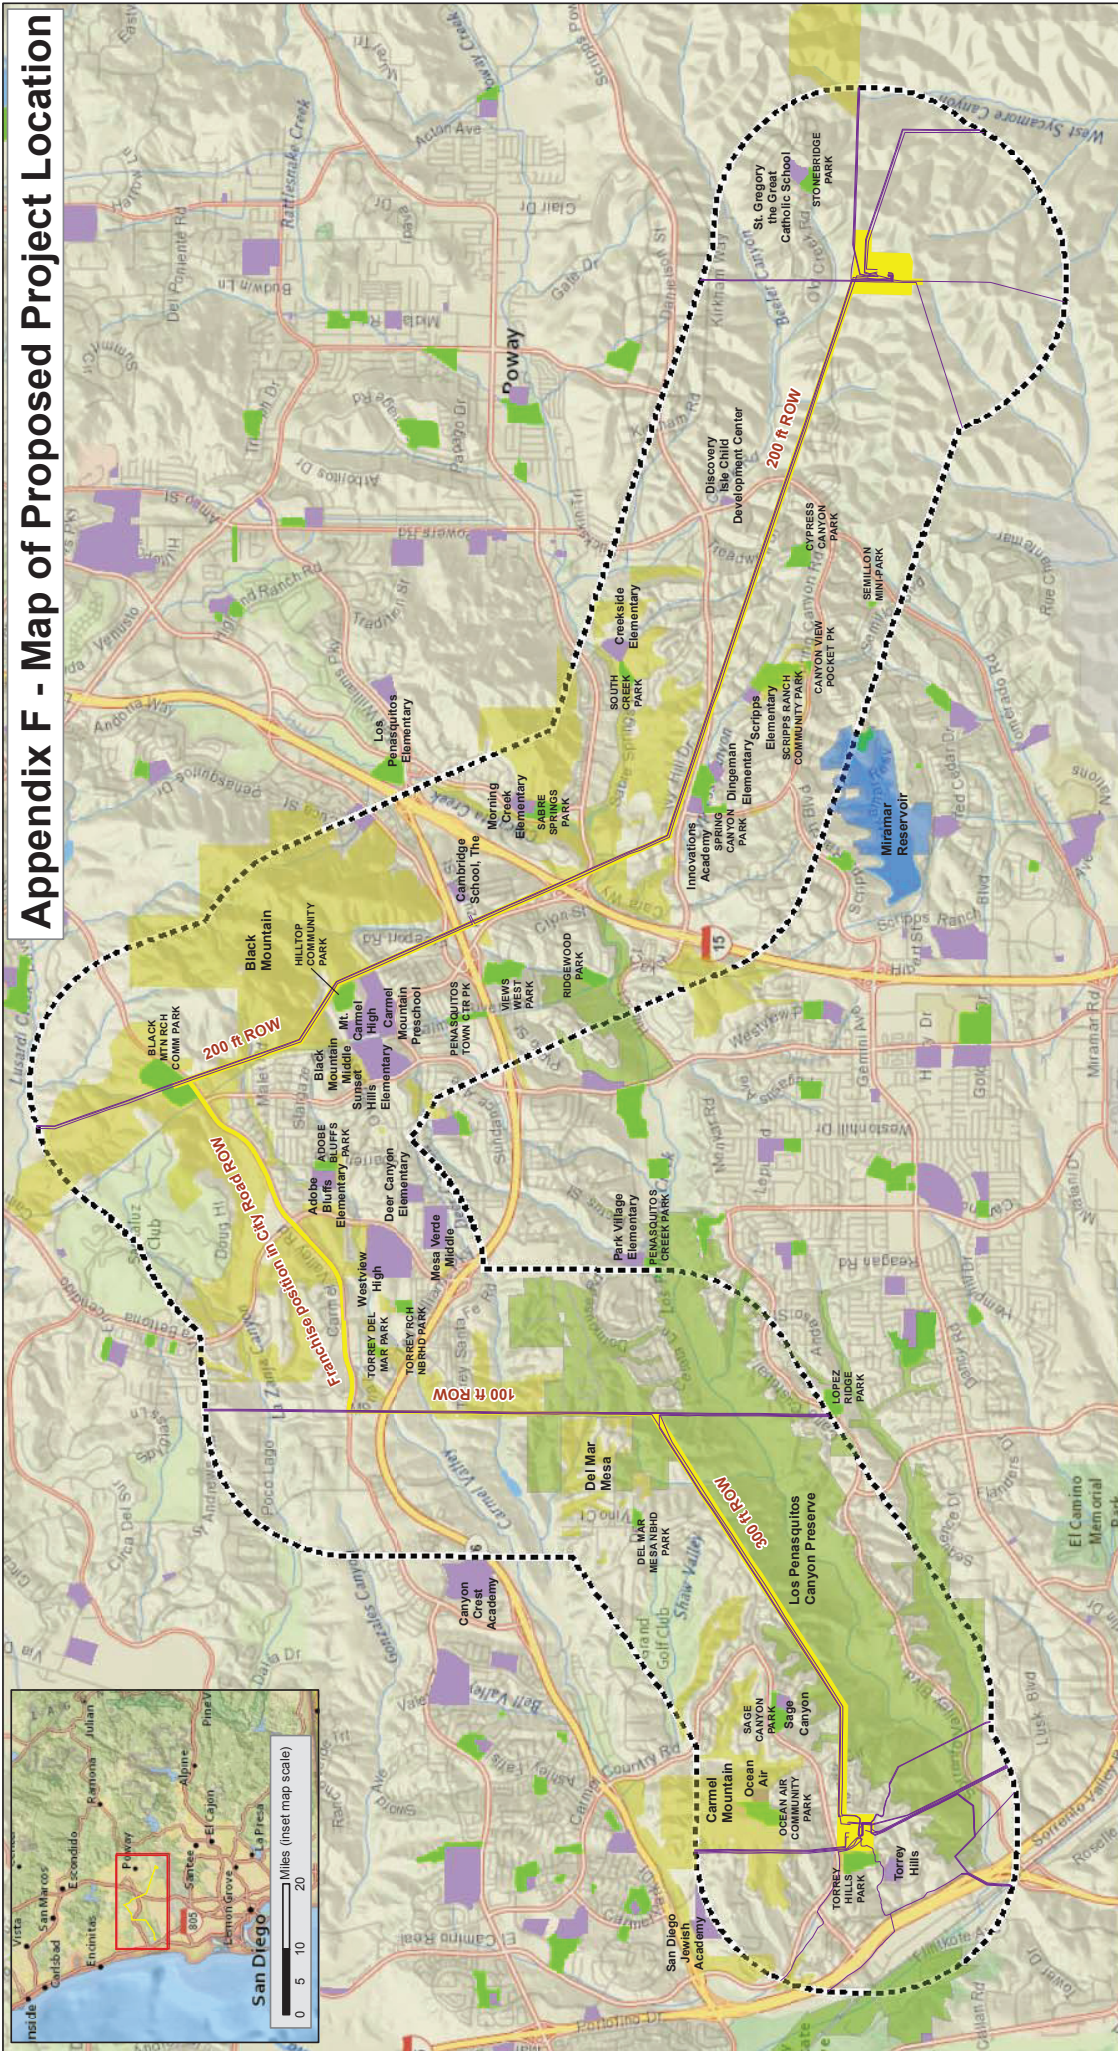

I declare under penalty of perjury that the foregoing statements are true and correct to the best of my knowledge.

Executed this ____ day of ____, 2014, at San Diego, California.

I. Proposed Project Scope

In an effort to increase the efficiency and supply of renewable generated power to the California Independent System Operator (CAISO) grid, CAISO has identified a policy-driven need for a new 230 kilovolt (kV) transmission line to connect the existing SDG&E Sycamore Canyon and Peñasquitos Substations. In response to the CAISO Request for Proposal (RFP) for this new 230 kV transmission line, SDG&E proposes to construct and operate a new, approximately 16.7 mile, 230 kV transmission line (TL) 230XX¹ between the existing SDG&E Sycamore Canyon and Peñasquitos Substations (Proposed Project). The Proposed Project would also include the consolidation of two existing 69 kV power lines onto new double-circuit, steel structures that would replace existing, predominantly wood structures. All new transmission line facilities will be located within existing SDG&E rights-of-way (ROW) or within franchise position within existing public roadways².

The Proposed Project would include the following primary components:

- Construction of approximately thirty-eight (38) new steel tubular 230 kV transmission line poles and two new single-circuit 138 kV power line poles between the existing Sycamore Canyon Substation and Carmel Valley Road (approximately 8.31 miles) all within existing SDG&E ROW;
- Install new 230 kV underground transmission line (approximately 2.84 miles) in Carmel Valley Road utilizing existing franchise position for almost the entire segment² and two new 230 kV cable pole structures;
- Bundle a portion of existing TL 23001 and TL 23004 between Carmel Valley Road and Peñasquitos Junction on the east side of existing towers and rename it to TL 23004 from San Luis Rey to Mission Substation. Make minor changes at San Luis Rey and Mission Substations to provide for same phasing of bundled configuration.
- Install new 230 kV conductor on vacated position (west side) of the existing 230 kV steel structures (permitted double-circuit 230 kV structures currently supporting TLs 23001 and 23004) between Carmel Valley Road and Peñasquitos Junction all within existing SDG&E ROW³;
- Install new 230 kV conductor on vacated position of the existing steel 230 kV structures (permitted double circuit 230 kV steel structures currently supporting TLs 13804 and 6906) between Peñasquitos Junction and Peñasquitos Substation all within existing SDG&E ROW;
- Consolidation, relocation, and reconductoring of existing 230 kV transmission lines and 138 and 69 kV power lines within existing SDG&E ROW; and
- Minor modifications at the Sycamore Canyon and Peñasquitos Substations to allow for connection of the new 230 kV transmission line.

¹ Transmission Line number (TL) to be assigned at a later date.

² Note that one small section of underground rights through existing SDG&E ROW would need to be acquired through an amendment to the existing ROW easement at that location.

³ Only existing structures will be used for the Proposed Project Segment “C”, from Carmel Valley Road to Peñasquitos Junction where one (1) new steel pole will replace the existing steel lattice tower.

The Proposed Project components are located on the extreme northern portion of Marine Corps Air Station (MCAS) Miramar as well as within a portion of the City of San Diego, California (Please see “Appendix 1 – Proposed Project Segment Map”). Specifically, the Proposed Project route traverses both developed residential and commercial areas as well as densely vegetated undeveloped areas on private and public lands, including lands owned by public agencies (local and federal). The Proposed Project will be constructed within existing SDG&E ROWs and franchise position throughout the entire scope. Minor work will be done at Sycamore and Peñasquitos Substations to provide for connection of the new 230 kV line.

The scope of magnetic field analysis for this “Detailed Magnetic Field Management Plan (FMP)” does not include the distribution lines, per the “SDG&E EMF⁴ Design Guidelines for Electrical Facilities” which states, “For distribution facilities, utilities would apply no-cost and low-cost measures by integrating reduction measures into construction and design standards, rather than evaluating no-cost and low-cost measures for each project.” Thus, for purposes of this FMP, the term “Proposed Project” only includes the new and existing 230 kV transmission lines and 138 and 69 kV power lines.

II. Magnetic Field Management Design Guidelines

The CPUC requires SDG&E apply its *EMF Design Guidelines for Electrical Facilities* (“Guidelines”) to all new electric transmission projects to reduce public exposure to magnetic fields. SDG&E filed its Guidelines with the CPUC in accordance with CPUC Decision 93-11-013 and updated them in accordance with the 2006 CPUC Decision 06-01-042.

Consistent with SDG&E’s Guidelines and with the CPUC order, magnetic fields and possible magnetic field management measures were evaluated along the power line locations associated with the Proposed Project. The results of this evaluation are contained in this FMP.

The FMP deals solely with magnetic fields. Moreover, reducing the magnetic field strength is but one of many factors to be considered in planning and designing a transmission system, along with other issues such as safety, environmental concerns, reliability, insulation and electrical clearance requirements, aesthetics, cost, operations and maintenance.

III. Methodology

In Decision 06-01-042, the CPUC notes that modeling is used to compare the relative effectiveness of field-reduction options and is not to be used to predict post-construction field levels. CPUC Decision 06-01-042, Finding of Fact 14: “Utility modeling methodology is intended to compare differences between alternative EMF mitigation measures and not determine actual EMF amounts.”⁵ The CPUC also notes that “modeling indicates relative differences in magnetic field reductions between different transmission line construction methods, but does not measure actual environmental magnetic fields.”⁶

⁴ EMF refers to electric and magnetic fields.

⁵ CPUC Decision D.06-01-042, Finding of Fact 14, p. 20.

⁶ Ibid, p.11.

In accordance with its Guidelines, SDG&E will take the following measures for the Proposed Project:

- Apply SDG&E's EMF Guidelines for transmission circuit facilities to the Proposed Project design.
- Identify and implement appropriate "no-cost" measures, i.e., those that will not increase overall project costs but will reduce the magnetic field levels.
- Identify and implement appropriate "low-cost" measures, i.e., those measures costing in the range of 4% of the total budgeted project cost that will reduce the magnetic field levels by 15% or more at the edge of the right-of-way (ROW).
- When a sufficiency of "low-cost" measures is available to reduce magnetic field levels, such that it is difficult to stay within the 4% cost guideline, apply these "low-cost" measures by priority, per the Guidelines.

The 15% minimum reduction required for low-cost measures is in addition to any field reduction due to "no-cost" measures. It is not cumulative.

Since the Proposed Project requires permitting under General Order 131-D, a Detailed Field Management Plan (FMP) will be used. The FMP consists of a project description, a checklist table showing evaluation of magnetic field reduction measures adopted or rejected per transmission line, evaluation of "no-cost" and "low-cost" magnetic field reduction techniques, magnetic field models where multiple lines are involved within the same easement or ROW, and a summary with recommendations.

Field levels were calculated using the "EMF Workstation" program developed and maintained by the Electric Power Research Institute. As the in-service date of the Proposed Project will be May 2017 the projected high usage currents, "2017 heavy summer," were used in the calculations. For the purpose of evaluating the field management measures, magnetic field levels were calculated and compared at a height of one meter above ground.

To evaluate the effectiveness of various magnetic field reduction measures, calculated values for a given technique were compared to calculated values without the technique. Since all power lines of the Proposed Project are within easements, or franchise rights-of-way (ROW), magnetic field levels were calculated and compared at the adjacent parallel property lines, or edges of ROW.

IV. Project Description

San Diego Gas & Electric Company (SDG&E) is a regulated public utility that provides electric service to three million customers within a 4,100 square mile service area, covering parts of two counties and 25 cities in the San Diego area. In an effort to increase the efficiency and supply of renewable generated power to the California Independent System Operator (CAISO) grid, CAISO has identified a policy-driven need for a new 230 kilovolt (kV) transmission line to connect the existing SDG&E Sycamore Canyon and Peñasquitos Substations. In response to the CAISO Request for Proposal (RFP) for this new 230 kV transmission line, SDG&E proposes to construct and operate a new, approximately 16.7-mile 230 kV bundled 900 kcmil ACSS/AW

transmission line (Tie Line [TL] 230XX⁷) between the existing SDG&E Sycamore Canyon and Peñasquitos Substations (Proposed Project). The Proposed Project would also include the consolidation of two existing 69 kV power lines onto new double-circuit, steel structures that would replace existing, predominantly wood structures. All new transmission line facilities will be located within existing SDG&E ROW or within franchise position within existing public roadways⁸.

The Proposed Project would include the following primary Segments:

- Segment A - Construction of approximately thirty-eight (38) new 230 kV and two (2) 138 kV steel tubular poles between the existing Sycamore Canyon Substation and Carmel Valley Road located within existing SDG&E ROW. Install new 230 kV bundled 900 kcmil ACSS/AW conductor on new double-circuit 230 kV steel tubular poles. Remove approximately 41 wood pole H-frame structures, two tubular steel poles, one 138 kV double-circuit steel cable pole, and two vertical configuration wood poles and relocate existing TL 13820 or TL 13811⁹ (currently a looped in 138 kV circuit at Chicarita Substation) to second position on the new double-circuit 230 kV steel tubular poles. Approximate length of this Segment is 8.31 miles. Land use includes schools, residential, commercial and undeveloped open space along the route. These schools include: Mt. Carmel High School, The Cambridge School, Innovation Academy, Dingeman Elementary, and Ellen Browning Scripps Elementary and are within an approximate four (4) mile portion of Segment “A”, centering on an area where two major highways, Ted Williams Pkwy (Hwy 56) and Interstate I-15 cross the existing SDG&E ROW;
- Segment B - Construction of new 230 kV “split-phase” underground transmission line, within franchise of Carmel Valley Road for almost the entire segment⁷ and construction of 230 kV tubular steel cable pole structures¹⁰ at each end of the Carmel Valley Road underground segment within existing SDG&E ROW. The new 230 kV cable pole located on the east end of the Carmel Valley Road underground segment would replace an existing 138 kV wood H-frame structure while the new 230 kV cable pole on the west end would replace an existing 230 kV steel lattice tower. Approximate length of this Segment is 2.84 miles. Land use includes daycare center, residential, commercial and undeveloped open space along the route. The daycare center is named, “The Kids Bay Learning Center”, and is located near the west end of this underground Segment;
- Segment C - Install new 230 kV bundled 900 kcmil ACSS/AW conductor on the vacated position of the existing 230 kV steel structures (10 steel lattice towers) and on one new tubular steel pole that will replace an existing steel lattice tower at the Peñasquitos Junction.¹¹ All structures are located within existing SDG&E ROW between Carmel Valley Road and Peñasquitos Junction. Existing tielines TL 23001 and TL 23004 would be reconducted and bundled on the east side of the existing structures and re-named TL

⁷ Transmission Line number (TL) to be assigned at a later date.

⁸ Note that two small sections of underground rights through existing SDG&E ROW would need to be acquired through an amendment to the existing ROW easements at these locations.

⁹ TL 13811 between Chicarita and Shadow Ridge Substations was previously named TL 13825 in 2013. Now the name “TL 13825” only includes the segment between Shadow Ridge and Batiquitas Substations.

¹⁰ The new 230 kV cable pole structure on the east end of the new underground segment would consist of 3 separate structures (horizontal arrangement), each supporting one phase each of the new 230 kV transmission line.

¹¹ Only existing structures will be used for the Proposed Project Segment “C”, from Carmel Valley Road to Peñasquitos Junction where one (1) new steel pole will replace the existing steel lattice tower.

23004 from San Luis Rey to Mission Substation. Minor changes at San Luis Rey and Mission Substations will be needed to provide for same phasing of this bundled configuration. Approximate length of this Segment is 2.19 miles and land use is residential and undeveloped open space;

- Segment D - Install new 230 kV bundled 900 kcmil ACSS/AW conductor on vacated position of the existing fourteen (14) steel lattice structures and one (1) steel tubular pole (permitted double circuit 230 kV steel structures) currently supporting power lines TL 13804 and TL 6906 between Peñasquitos Junction and Peñasquitos Substation all within existing SDG&E ROW. Also within the corridor in this Segment, existing 69 kV power lines (TL 675 and TL 6906) would be consolidated onto approximately seventeen (17) new 69 kV, double-circuit steel tubular poles that would replace fifteen (15) existing 69 kV wood H-frame structures and five wood monopole structures that currently support TL 675 and TL 6906. Construction of two new 69 kV tubular steel cable poles that would replace existing wood 69 kV cable poles located immediately outside of the Peñasquitos Substation. Approximate length of this Segment is 3.34 miles with some residential, but primarily undeveloped open space along both sides of easement;
- Existing Lines and Substations – Consolidation, relocation, and reconductoring of existing 230 kV transmission lines, and 138 kV and 69 kV power lines, within existing SDG&E ROW; and minor modifications at the Sycamore Canyon and Peñasquitos Substations to allow for connection of the new 230 kV transmission line.

The Proposed Project components are located on the extreme northern portion of Marine Corps Air Station (MCAS) Miramar as well as within a portion of the City of San Diego, California (Please see “Appendix 1 – Proposed Project Segment Map”). Specifically, the Proposed Project route traverses both developed residential and commercial areas as well as densely vegetated undeveloped areas on private and public lands, including lands owned by public agencies (local and federal). The Proposed Project will result in a new 230 kV transmission line that will connect the existing Sycamore Canyon and Peñasquitos Substations through utilization of existing SDG&E ROWs and franchise position within the City of San Diego.

Drawings and descriptions showing a typical pole top configuration, tieline relative locations to each other and left and right ROW are included in Appendix 1. Figure 1 below shows the drawing symbols; the arrows on the drawings indicate the viewing direction for orienting each drawing and the direction of current flow.

Figure 1: Drawing Symbol Definitions

Symbol	Interpretation	Meaning
	Viewing Direction	The orientation as seen when looking toward the north
	Current flow into the page	Direction of current flow is same as viewing direction
	Current flow out of the page	Direction of current flow is opposite of viewing direction
	Underground Transmission Circuit	Location of underground transmission circuit
	Underground Distribution Circuit	Location of underground distribution circuit

V. Field Management Measures Considered

Per the “EMF Design Guidelines for Electrical Facilities, Table 3-1”, all portions of the power lines, TL 675, TL 6906, TL 6920, TL 13804, TL 13811, TL 13820, and transmission lines TL 23001, TL 23004, and new TL 230XX within scope of the Proposed Project were reviewed for suitable application of magnetic field reduction measures, as listed in “*Table 1: Magnetic Field Reduction Measures Adopted or Rejected*” below. These techniques will be discussed under the “Section VI- Magnetic Field Reduction Measures Evaluated for the Project” that follows.

Table 1: Magnetic Field Reduction Measures Adopted or Rejected

Segment(s)	Location (Street, Area)	Adjacent Land Use	Reduction Measure Considered	Measure Adopted? (Yes/No)	Estimated Cost to Adopt
ALL	Within existing ROW and franchise	Schools, Residential, Commercial, Undeveloped	Locate power lines closer to center of the utility corridor to extent possible.	No	N/A
	<p>Reason not adopted: The alignment of the new steel poles in Segment “A” for TL 230XX and TL 13820 or TL 13811¹², and in Segment “D” for TL 6906 and TL 675 cannot move closer to center of easement due to other tie lines within the corridor and separation requirements. Segment “C” uses existing pole structures which already are as close to center of easement as possible. Segment “B” is underground and located as close to centerline of franchise without conflicting with other existing underground utilities. By design, the underground is on the south side of centerline where it passes the daycare center (The Kids Bay Learning Center) near the west end of the Segment. Therefore, no "no-cost" or "low-cost" alternatives were considered for this reduction measure.</p>				
A, C, & D	Within existing ROW	Schools, Residential, Commercial, Undeveloped	Increasing structure height (increasing the height of the conductor from ground level)	Yes	No-Cost
	<p>Per SDG&E Standards for 230 kV transmission lines and 138 kV / 69 kV power lines, either double circuit or single circuit with no distribution underbuild or single distribution underbuild, minimum sag height is 30 feet from lowest circuit wire to ground as per <i>GO-95 Design Standards</i> and 35 feet from lowest circuit wire for double underbuild. After reviewing the Preliminary design plans for Segments “A” and “D” where new overhead poles will be installed, it has been determined that no-cost options exist. The new design will utilize taller “soldiered” pole locations relative to the existing structures which allows wire sagging to become more uniform and minimizes the potential for blowout conflicts. In addition, the sag height was designed at heights consistent with those of existing structures. This proposed sag height averages a height increase of eleven (11) feet (41 ft. sag) providing a reduction in milligauss values of approximately 18% at the closer (west) ROW without raising milligauss values at the opposite ROW. The proposed sag height for the 69 kV power lines in Segment “D” also averages a height increase of eleven (11) feet (41 ft. sag), providing a reduction in milligauss values of approximately 1% at the closer (north) ROW without raising milligauss values at the opposite ROW. This should be considered as a “no-cost” EMF reduction measure for both Segments, as it indeed reduces fields at no additional Proposed Project cost. (See “no-cost” options below.)</p> <p>Only existing structures will be used for the Proposed Project Segment “C”, from Carmel Valley Road to Peñasquitos Junction where one (1) new steel pole will replace the existing steel lattice tower. Therefore, raising pole height was rejected for Segment “C”.</p>				

¹² TL 13811 between Chicarita and Shadow Ridge Substations was previously named TL 13825 in 2013. Now the name “TL 13825” only includes the segment between Shadow Ridge and Batiquitos Substations.

Segment(s)	Location (Street, Area)	Adjacent Land Use	Reduction Measure Considered	Measure Adopted? (Yes/No)	Estimated Cost to Adopt
	Within existing ROW and franchise	Schools, Residential, Commercial, Undeveloped	Increasing structure height (increasing the height of the conductor from ground level)	No	N/A
A, C, & D	<p>Reason not adopted: After reviewing the Preliminary design plans for Segments “A” and “D” where new overhead poles will be installed, it has been determined that no-cost options exist while additional measures would not qualify as low-cost. The new design will utilize taller “soldiered” pole locations relative to the existing structures which allows wire sagging to become more uniform and minimizes the potential for blowout conflicts. In addition, the sag height was designed at heights consistent with those of existing structures.</p> <p>While further reviewing of Segment “A” where nearby land uses include schools, and residential and commercial properties, raising pole heights beyond the initial design height was examined as a possible "low-cost" measure. Calculations indicate that an increase of 12 feet would yield a reduction of 15% in magnetic field values at the west edge of ROW, but a slight <u>increase</u> at the east edge. For height increases greater than 12 feet, calculations yielded only marginal decreases (less than 1%) at the east edge of ROW. Therefore, increasing structure height as a "low-cost" field reduction measure was rejected for Segment "A" of this Proposed Project.</p> <p>Raising heights of the new 69 kV poles in Segment "D" beyond the initial design height also was examined as a possible "low-cost" measure. Calculations indicate that for sag height increases of 5 to 15 feet, the reduction in magnetic field values at the west edge of ROW would be no more than 1.5%, with a slight <u>increase</u> at the east edge. Even for a sag height increase of 40 feet, calculations yielded only 5% decrease at the west edge, and only a marginal decrease (less than 1%) at the east edge. Therefore, increasing height of the new 69 kV poles as a "low-cost" field reduction measure was rejected for Segment "D" of this Proposed Project.</p> <p>Only existing structures will be used for the Proposed Project Segment “C”, from Carmel Valley Road to Peñasquitos Junction where one (1) new steel pole will replace the existing steel lattice tower. Therefore, raising pole height was rejected for Segment “C”.</p>				
	Within existing ROW and franchise	Schools, Residential, Commercial, Undeveloped	Reduce conductor (phase) spacing.	No	N/A
ALL	<p>Reason not adopted: Segment “A” - New poles needed in this Segment would have the conductor spacing configuration for 230/138 kV double circuit steel poles per “<i>SDG&E Electric Transmission Standards</i>”, which provides optimum magnetic field reduction at edge-of-ROW. Segment “B”- The underground portion of the Proposed Project would use “<i>SDG&E Electric Transmission Standards</i>” for underground phase spacing. Segment “C” - The existing power and transmission lines within the utility corridor (TL 23004, TL 23001, TL 230XX, TL 13804) would remain on existing structures with existing pole top configuration. Modifications to their existing conductor phase spacing is out of scope of the Proposed Project. Segment “D” - The new steel poles in the Proposed Project for TL 675 and TL 6906 would comply with “<i>SDG&E Electric Transmission Standards</i>” for 69 kV double circuit configurations which provide optimum magnetic field reduction. Therefore this reduction measure was rejected.</p>				

Segment(s)	Location (Street, Area)	Adjacent Land Use	Reduction Measure Considered	Measure Adopted? (Yes/No)	Estimated Cost to Adopt
A, D	Within existing ROW and franchise	Schools, Residential, Commercial, Undeveloped	Phasing Circuits to Reduce Magnetic Fields	No	N/A
	<p>Reason not adopted: Reduction of magnetic field values (milligauss) through phasing techniques was considered and modeled for the Proposed Project for all overhead Segments where two tie lines share a common corridor. Modifying current phasing of any existing circuit needs to be done at both of the terminating substations for that circuit and therefore includes the entire circuit length. Where a portion of this distance becomes out-of-scope of the Proposed Project, changing existing circuit phasing was discarded as a field reduction measure since modifying those circuits phasing could inadvertently increase milligauss values in areas out-of-scope of this Project. Only the portion of Segment “A” where TL 13820 extends from Sycamore Canyon to Chicarita Substation was modeling performed to see if milligauss would be reduced by changing phase of TL 13820 and/or TL 230XX. Modeling performed to try and reduce magnetic fields in Segment “D” and the remaining portion of Segment “A” only included various phase configurations of the new transmission line, TL 230XX, since all other circuits extended out-of-scope of the Proposed Project. The Preliminary Design phase for new TL 230XX is A-B-C (top-to-bottom). Modeling for Segments “A” and “D” showed the proposed phasing of TL 230XX, A-B-C (t-b), provides lowest milligauss values throughout its path from Sycamore Canyon to Peñasquitos Substation. Therefore, no "no-cost" or "low-cost" alternatives were considered for this reduction measure of the overhead portion of Segments “A” and “D” for the Proposed Project.</p>				
	Within existing ROW and franchise	Schools, Residential, Commercial, Undeveloped	Phasing Circuits to Reduce Magnetic Fields	Yes	No-Cost
B, C	<p>Reduction of magnetic field values (milligauss) through phasing techniques was considered and modeled for the Proposed Project Segment “B” underground. All overhead Segments show the new 230 kV TL230XX as a “bundled 900 kcmil ACSS/AW” circuit (two circuit wires per phase) which would be installed as a “split-phase” configuration once installed in underground conduit. When undergrounding a “split-phase” single circuit tie line, phasing can be reversed on one set of circuit wires. Since current flows in the same direction for all circuit wires, reverse phasing one set of circuit wires will reduce milligauss values approximately 97% at edge-of-ROW, which indeed reduces fields at no additional Project cost. Therefore reverse phasing of the “split-phase” configuration should be considered a “no-cost” reduction measure for Segment “B”.</p> <p>Reduction of magnetic field values through phasing techniques was considered and modeled for the Proposed Project Segment “C” where TL 23004 (C-B-A) and TL 23001(A-B-C) become a bundled circuit between San Luis Rey and Peñasquitos Junction and be located on the east side of existing structures (re-named TL 23004), to allow room for new TL 230XX tieline on the west side of the same structures. When these two tielines are bundled, each bundled pair of circuit wires must have the same phase. Since current flow of the new TL 230XX goes from north-to-south and new TL 23004 goes south-to-north, having the same phasing would provide lowest milligauss values at edge-of-ROW. By reverse phasing existing TL 23004 to be A-B-C (t-b) as TL 23001 currently is, the new TL 23004 bundled circuit will be the same phase as TL 230XX (A-B-C). Therefore reverse phasing of existing TL 23004 when creating this bundled configuration with existing TL 23001 should be considered as a “no-cost” reduction measure for Segment “C”.</p>				

Segment(s)	Location (Street, Area)	Adjacent Land Use	Reduction Measure Considered	Measure Adopted? (Yes/No)	Estimated Cost to Adopt
A, C, & D	Within existing ROW	Schools, Residential, Commercial, Undeveloped	Placing Overhead Underground	No	N/A
	<p>Reasons not adopted: Reduction of magnetic field values (milligauss) through undergrounding was considered and modeled for the Proposed Project for overhead Segments where two or more tielines or power lines share a common corridor, a total of approximately 13.8 miles of the 16.7 mile total Project length. This is considered a “low-cost” reduction measure for these Segments, and 4% of the total Proposed Project cost would provide for a length of approximately 0.37 miles of undergrounding. Per the <i>SDG&E Guidelines</i>, group prioritization for land use categories was used in determining how mitigation costs should be applied¹³. These priorities are: (1) Schools, licensed day care, hospitals; (2) Residential; (3) Commercial; (4) Recreational; (5) Agricultural; and (6) Undeveloped land with permanent residence. Highest priority was given to Segment “A”, the 8.31 mile segment of overhead, where five (5) schools are adjacent to or within 1,000 feet of the proposed 230 kV tie line. These schools include: Mt. Carmel High School, The Cambridge School, Innovation Academy, Dingeman Elementary, and Ellen Browning Scripps Elementary. While detailed engineering for an underground transmission line within Segment “A” has not been performed, the route is assumed to be the same as the overhead route for the Proposed Project, to the greatest extent possible. The schools are within an approximate four (4) mile portion of Segment “A”, centering on an area where two major highways, Ted Williams Pkwy (Hwy 56) and Interstate I-15 cross the existing SDG&E ROW. The area also includes sections with extreme terrain making, undergrounding much more difficult and expensive to accomplish, if not impossible, not to mention the additional expense to go under the two major highways. These excessive costs would significantly increase the overall cost of the Project beyond the range of 4% of the total budgeted Project cost. The length of undergrounding for “low-cost” reduction measures within 4% of total Project cost would be reduced to less than the calculated length of 0.37 miles. Since equitable mitigation for an entire class is a desirable goal, and this “low-cost” measure of 4% of total Proposed Project cost would cover less than 9% of the four (4) mile distance, undergrounding as a "low-cost" field-reduction measure was not adopted. A more broadly effective "no-cost" measure is proposed for use under "Increasing structure height" in this Table.</p> <p>(see “Magnetic Field Reduction Measures Evaluated for the Project” below)</p>				

¹³ SDG&E Guidelines, p. 12: "When spending for “low-cost” measures would otherwise disallow equitable magnetic field reduction for all areas within a single land use class, prioritization can be achieved by considering location and/or density of permanently occupied structures on lands adjacent to the projects, as appropriate."

Segment(s)	Location (Street, Area)	Adjacent Land Use	Reduction Measure Considered	Measure Adopted? (Yes/No)	Estimated Cost to Adopt
B	Within existing franchise	Schools, Residential, Commercial, Undeveloped	Increase trench depth	No	N/A
	<p>Reasons not adopted: Trench depth of the proposed TL230XX in Segment “B” is per SDG&E Standards designed to be at 3 feet top-of-conduit (TOC). This underground portion of the Proposed Project is the limiting factor for ampacity rating values due to degradation caused by heat created by compaction of underground installations. Increasing the depth of Segment “B” underground would further degrade line rating of the new 230 kV making it not meet the ampacity rating requirement for the Proposed Project. Therefore, this "low-cost" reduction measure was not considered for the underground portion, Segment “B” of the Proposed Project.</p>				

VI. Magnetic Field Reduction Measures Evaluated for the Project

Per SDG&E’s Guidelines this FMP is limited to an assessment of increasing structure height as a field reduction technique, and phasing circuits to reduce magnetic fields for those double circuit pole portions of the Proposed Project. Other techniques such as locating power lines closer to the center of the easement, reducing conductor (phase) spacing, placing overhead underground to reduce magnetic fields, and increasing trench depth were not implemented.

Locating power lines closer to the center of the easement: The alignment of the new steel poles in Segment “A” for TL 230XX and TL 13820 or TL 13811¹⁴, and in Segment “D” for TL 6906 and TL 675 cannot move closer to center of easement due to other tie lines within the corridor and separation requirements. Segment “C” uses existing pole structures which already are as close to center of easement as possible. Segment “B” is underground and located as close to centerline of franchise without conflicting with other existing underground utilities. By design, the underground is on the south side of centerline where it passes the daycare center (The Kids Bay Learning Center) near the west end of the Segment. Therefore, no "no-cost" or "low-cost" alternatives were considered for this reduction measure.

Increasing structure height (increasing the height of the conductor from ground level): Per SDG&E Standards for 230 kV transmission lines and 138 kV / 69 kV power lines, either double circuit or single circuit with no distribution underbuild or single distribution underbuild, minimum sag height is 30 feet from lowest circuit wire to ground as per *GO-95 Design Standards* and 35 feet from lowest circuit wire for double underbuild. In some Segments in this Proposed Project there will be single distribution 12 kV underbuild.

¹⁴ TL 13811 between Chicarita and Shadow Ridge Substations was previously named TL 13825 in 2013. Now the name “TL 13825” only includes the segment between Shadow Ridge and Batiquitas Substations.

After reviewing the Preliminary design plans for Segments “A” and “D” where new overhead poles will be installed¹⁵, it has been determined that no-cost options exist while additional measures would not qualify as low-cost. The new design will utilize taller “soldiered” pole locations relative to the existing structures which allows wire sagging to become more uniform and minimizes the potential for blowout conflicts. In addition, the sag height was designed at heights consistent with those of existing structures. This proposed sag height averages a height increase of eleven (11) feet (**41 ft. sag**) providing a reduction in milligauss values of approximately **18%** at the closer (west) ROW without raising milligauss values at the opposite ROW. The proposed sag height for the 69 kV power lines in Segment “D” also averages a height increase of eleven (11) feet (**41 ft. sag**) providing a reduction in milligauss values of approximately **1%** at the closer (north) ROW without raising milligauss values at the opposite ROW. This should be considered as a “**no-cost**” EMF reduction measure for both Segments, as it indeed reduces fields at no additional Proposed Project cost. (See “no-cost” options below.)

While further reviewing of Segment “A” where nearby land uses include schools, and residential and commercial properties, raising pole heights beyond the initial design height was examined as a possible "low-cost" measure. Calculations indicate that an increase of 12 feet would yield a reduction of 15% in magnetic field values at the west edge of ROW, but a slight increase at the east edge. For height increases greater than 12 feet, calculations yielded only marginal decrease (less than 1%) at the east edge of ROW. Therefore, increasing structure height as a "low-cost" field reduction measure was rejected for Segment "A" of this Proposed Project.

Raising heights of the new 69 kV poles in Segment "D" beyond the initial design height also was examined as a possible "low-cost" measure. Calculations indicate that for sag height increases of 5 to 15 feet, the reduction in magnetic field values at the west edge of ROW would be no more than 1.5%, with a slight increase at the east edge. Even for a sag height increase of 40 feet, calculations yielded only 5% decrease at the west edge, and only a marginal decrease (less than 1%) at the east edge. Therefore, increasing height of the new 69 kV poles as a "low-cost" field reduction measure was rejected for Segment "D" of this Proposed Project.

Only existing structures will be used for the Proposed Project Segment “C”, from Carmel Valley Road to Peñasquitos Junction where one (1) new steel pole will replace the existing steel lattice tower. Therefore, raising pole height was rejected for Segment “C”.

Reducing conductor (phase) spacing: New poles needed in Segment “A” would have the conductor spacing configuration for 230/138 kV double circuit steel poles per “*SDG&E Electric Transmission Standards*”, which provides optimum magnetic field reduction at edge-of-ROW. Segment “B”, the underground portion of the Proposed Project, would use “*SDG&E Electric Transmission Standards*” for underground phase spacing. Segment “C”, the existing power and transmission lines within the utility corridor (TL 23004, TL 230XX, TL 13804) would remain on existing poles with existing pole top configuration for double circuit poles per “*SDG&E Electric Transmission Standards*”. Modifications to their existing conductor phase spacing would be out of scope of the Proposed Project. The new steel poles in the Proposed Project for Segment “D” regarding TL 675 and TL 6906 would comply with “*SDG&E Electric Transmission Standards*”

¹⁵ Only existing structures will be used for the Proposed Project Segment “C”, from Carmel Valley Road to Peñasquitos Junction where one (1) new steel pole will replace the existing steel lattice tower. Therefore raising pole height was rejected.

for 69 kV double circuit configurations which provide optimum magnetic field reduction. Therefore, reducing conductor phase spacing to reduce magnetic fields was rejected as a reduction technique.

Phasing Overhead (OH) Circuits to Reduce Magnetic Fields (Segment “A” and “D”): Reduction of magnetic field values (milligauss) through phasing techniques was considered and modeled for the Proposed Project for all overhead Segments where two tie lines share a common corridor. Modifying current phasing of any existing circuit needs to be done at both of the terminating substations for that circuit and therefore includes the entire circuit length. Where a portion of this distance becomes out-of-scope of the Proposed Project, changing existing circuit phasing was discarded as a field reduction measure since modifying those circuits phasing could inadvertently increase milligauss values in areas out-of-scope of this Project. However, the portion of Segment “A” where TL 13820 extends from Sycamore Canyon to Chicarita Substation was modeled to see if milligauss would be reduced by changing phase of either TL 13820 and/or TL 230XX. The milligauss values increased at edge-of-ROW when TL 13820 phasing was modified. Modeling performed to try and reduce magnetic fields in Segments “D” and the remaining portion of Segment “A” only included various phase configurations of the new transmission line, TL 230XX, since all other circuits extended out-of-scope of the Proposed Project. The Preliminary Design phase for new TL 230XX is A-B-C (top-to-bottom). Modeling for Segments “A” and “D” showed the proposed phasing of TL 230XX, **A-B-C (t-b)**, provides lowest milligauss values throughout its path from Sycamore Canyon to Peñasquitos Substation. Therefore, no "no-cost" or "low-cost" alternatives were considered for this reduction measure of the overhead portion of the Proposed Project.

Phasing Overhead (OH) Circuits to Reduce Magnetic Fields (Segment “C”):

Reduction of magnetic field values through phasing techniques was considered and modeled for the Proposed Project Segment “C” where TL 23004 (C-B-A) and TL 23001(A-B-C) become a bundled circuit between San Luis Rey and Peñasquitos Junction and are located on the east side of existing structures (re-named TL 23004), to allow room for new TL 230XX tieline on the west side of the same structures. When these two tielines are bundled, each bundled pair of circuit wires must have the same phase. Since current flow of the new TL 230XX goes from north-to-south and new TL 23004 goes south-to-north, having the same phasing would provide lowest milligauss values at edge-of-ROW. By reverse phasing existing **TL 23004** to be **A-B-C (t-b)** the “new TL 23004” bundled circuit will be the same phase as TL 230XX (A-B-C). This provides a reduction in milligauss values of approximately **13%** at the west ROW and **36%** at east ROW. Therefore reverse phasing of existing TL 23004 when creating this bundled configuration with existing TL 23001 should be considered as a “no-cost” reduction measure for Segment “C”. As part of the Proposed Project, minor changes at San Luis Rey and Mission Substations will be needed to provide for same phasing of this bundled configuration as it enters the substation.

Phasing Underground (UG) Circuits to Reduce Magnetic Fields: Reduction of magnetic field values (milligauss) through phasing techniques was considered and modeled for the Proposed Project Segment “B” underground. All overhead Segments show the new 230 kV TL230XX as a “bundled 900 kcmil ACSS/AW” circuit (two circuit wires per phase) which is installed as a “split-phase” configuration once installed in underground conduit. When undergrounding a “split-phase” single circuit tie line, phasing can be reversed on one set of circuit wires. Since current flows in the same direction for all circuit wires, reverse phasing one set of circuit wires will reduce milligauss values by approximately **97%** at edge-of-ROW, which

indeed reduces fields at no additional Project cost. Therefore reverse phasing of the “split-circuit” configuration should be considered a “no-cost” reduction measure for Segment “B”.

Undergrounding to reduce magnetic fields: Reduction of magnetic field values (milligauss) through undergrounding was considered and modeled for the Proposed Project for overhead Segments where two or more tielines or power lines share a common corridor, a total of approximately 13.8 miles of the 16.7 mile total Project length. This is considered a “low-cost” reduction measure for these Segments and 4% of the total Proposed Project cost would provide for a length of approximately 0.37 miles of undergrounding. Per the *SDG&E Guidelines*, group prioritization for land use categories was used in determining how mitigation costs should be applied¹⁶. These priorities are: (1) Schools, licensed day care, hospitals; (2) Residential; (3) Commercial; (4) Recreational; (5) Agricultural; and (6) Undeveloped land. Highest priority was given to Segment “A”, the 8.31 mile segment of overhead, where five (5) schools are adjacent to or within 1,000 feet of the proposed 230 kV tie line. These schools include: Mt. Carmel High School, The Cambridge School, Innovation Academy, Dingeman Elementary, and Ellen Browning Scripps Elementary. While detailed engineering for an underground transmission line within Segment “A” has not been performed, the route is assumed to be the same as the overhead route for the Proposed Project to the greatest extent possible. The schools are within an approximate four (4) mile portion of Segment “A”, centering on an area where two major highways, Ted Williams Pkwy (Hwy 56) and Interstate I-15 cross the existing SDG&E ROW. The area also includes sections with extreme terrain making undergrounding much more difficult and expensive to accomplish if not impossible, not to mention the additional expense to go under the two major highways. These excessive costs would significantly increase the overall cost of the Project beyond the range of 4% of the total budgeted Project cost. The length of undergrounding for “low-cost” reduction measures within 4% of total Project cost would be reduced to less than the calculated length of 0.37 miles. Since equitable mitigation for an entire class is a desirable goal, and this “low-cost” measure of 4% of total Proposed Project cost would cover less than 9% of the four (4) mile distance, undergrounding as a “low-cost” field-reduction measure was not adopted. A more broadly effective “no-cost” measure is proposed for use under “Increasing structure height” in this Table. (see “Magnetic Field Reduction Measures Evaluated for the Project” below)

Increasing trench depth: Trench depth of the proposed TL230XX in Segment “B” is per SDG&E Standards designed to be at 3 feet top-of-conduit (TOC). This underground portion of the Proposed Project is the limiting factor for ampacity rating values due to degradation caused by heat created by compaction of underground installations. Increasing the depth of Segment “B” underground would further degrade line rating of the new 230 kV making it not meet the ampacity rating requirement for the Proposed Project. Therefore, this “low-cost” reduction measure was not considered for the underground portion, Segment “B” of the Proposed Project.

¹⁶ SDG&E Guidelines, p. 12: “When spending for “low-cost” measures would otherwise disallow equitable magnetic field reduction for all areas within a single land use class, prioritization can be achieved by considering location and/or density of permanently occupied structures on lands adjacent to the projects, as appropriate.”

VII. Magnetic Field Reduction Measures Recommended for the Project

Reduction of magnetic field values by increasing structure height as a field reduction technique was adopted as a viable method to reduce magnetic fields at the edge-of-ROW for the Proposed Project. The recommended field reduction techniques are:

A. “No-Cost” Field Management Technique:

Segment “A” and Segment “D” - After reviewing the Preliminary design plans for Segments “A” and “D” where new overhead poles will be installed the sag height was designed at heights similar to those of existing structures to minimize visual impact. This proposed sag height averages **41 feet** which achieves a maximum magnetic field reduction of **18%** for no underbuild or single underbuild, at the west edge-of-ROW without raising milligauss values at the east ROW for Segment “A”. For Segment “D” there is a slight reduction of **1%** on the north edge-of-ROW with no increase at the south edge-of-ROW. This constitutes a “no-cost” EMF reduction measure, as it indeed reduces fields at no additional Project cost.

Segment “B” - Reduction of magnetic field values (milligauss) through phasing techniques was considered and modeled for the Proposed Project Segment “B” underground which would be a “split-phase” configuration once installed in the underground conduit. When undergrounding a “split-phase” single circuit tie line, phasing can be reversed on one set of circuit wires. Since current flows in the same direction for a “split phase” single circuit, reverse phasing one set of circuit wires will reduce milligauss values approximately **97%**, which indeed reduces fields at edge-of-ROW at no additional Project cost. Therefore reverse phasing of the “split-phase” configuration should be considered a “no-cost” reduction measure for Segment “B”

Segment “C” - Reduction of magnetic field values through phasing techniques was considered and modeled for the Proposed Project Segment “C” where TL 23004 (C-B-A) and TL 23001(A-B-C) become a bundled circuit between San Luis Rey and Peñasquitos Junction and are located on the east side of existing structures (re-named TL 23004), to allow room for new TL 230XX tieline on the west side of the same structures. When these two tielines are bundled, each bundled pair of circuit wires must have the same phase. Since current flow of the new TL 230XX goes from north-to-south and new TL 23004 goes south-to-north, having the same phasing would provide lowest milligauss values at edge-of-ROW. By reverse phasing existing **TL 23004** to be **A-B-C (t-b)** the “new TL 23004” bundled circuit will be the same phase as TL 230XX (A-B-C). This provides a reduction in milligauss values of approximately **13%** at the west ROW and **36%** at east ROW. Therefore reverse phasing of existing TL 23004 to **A-B-C (t-b)** when creating this bundled configuration with existing TL 23001 should be considered as a “no-cost” reduction measure for Segment “C”.

B. “Low-Cost” Field Management Technique:

There are no “low-cost” magnetic field reduction techniques recommended for the Proposed Project.

VIII. Summary of Calculated Magnetic Field Levels for the Transmission Portion of the Proposed Project

The following tables show the initial design and recommended (“no-cost”) design magnetic field values (milligauss) and the percent change for SEG “A”, SEG “B”, SEG “C”, and SEG “D” of the Proposed Project. A positive percentage value shows a reduction in milligauss, while a negative value shows an increase in milligauss from the initial design. The magnetic field values were calculated at the edges-of-ROWs, or edge-of-easement for all Segments. Since “increasing structure height” and “phasing circuit” field reduction techniques were the only viable techniques, other modeling tables were not included. The location of the Segments are included in the attached “Appendix 1”.

Table 2: Segment “A” – Overhead TL 230XX from Sycamore Canyon Substation, north to Carmel Valley Rd.

SEG A		Raise SAG Height					
Overhead - Sycamore Substation to Carmel Valley Rd.							
Standard SAG Height 30 feet		Initial Design SAG Height 41 feet				Percent (%) Milligauss Reduction	
West	East	West	East	West	East	West	East
59.4	46.3	48.9	46.5	18%	0%		

- Land Use = Schools, Residential, Commercial, Undeveloped Open Space
- Length = approx. 8.31 miles
- Right-of-Way = 200 ft.
- Make SAG similar to existing SAG height to avoid visual or aesthetic concerns
- See “Appendix 1 – Segment A” attached for location.

Table 3: Segment “B” – Underground TL 230XX within Franchise of Carmel Valley Rd.

SEG B		Reverse Phase Underground 10 Ft. South Centerline					
Underground - Within Franchise - Carmel Valley Rd.							
Initial Phase A-B-C_A-B-C		Reverse Phase A-B-C_C-B-A				Percent (%) Milligauss Reduction	
North	South	North		South		North	South
4.4	8.4	0.1		0.3		98%	96%

- Land Use = Daycare Center, Residential, Undeveloped Open Space
- Length = approx. 2.84 miles
- Right-of-Way = average 130 ft. (120 ft. – 170 ft.)
- Reverse Phase the Split Phase underground
- See “Appendix 1 – Segment B” attached for location.

Table 4: Segment “C” – Overhead TL 230XX from Carmel Valley Rd. south to Peñasquitos Junction on Existing Structures

SEG C		Reverse Phase bundled TL 23004 SA - MS					
TL 230XX_A-B-C							
Initial Phase A-B-C_C-B-A		Reverse Phase TL23004 A-B-C_A-B-C				Percent (%) Milligauss Reduction	
West	East	West		East		West	East
140.9	142.4	122.3		91.0		13%	36%

- Land Use = Residential, Undeveloped Open Space
- Length = approx. 2.19 miles
- Right-of-Way = 100 ft.
- Make new bundled TL 23004 **A-B-C (t-b)** by reverse phasing it at San Luis Rey and Mission Substation.
- See “Appendix 1 – Segment B” attached for location.

Table 5: Segment “D” – Overhead TL 230XX west from Peñasquitos Junction to Peñasquitos Substation

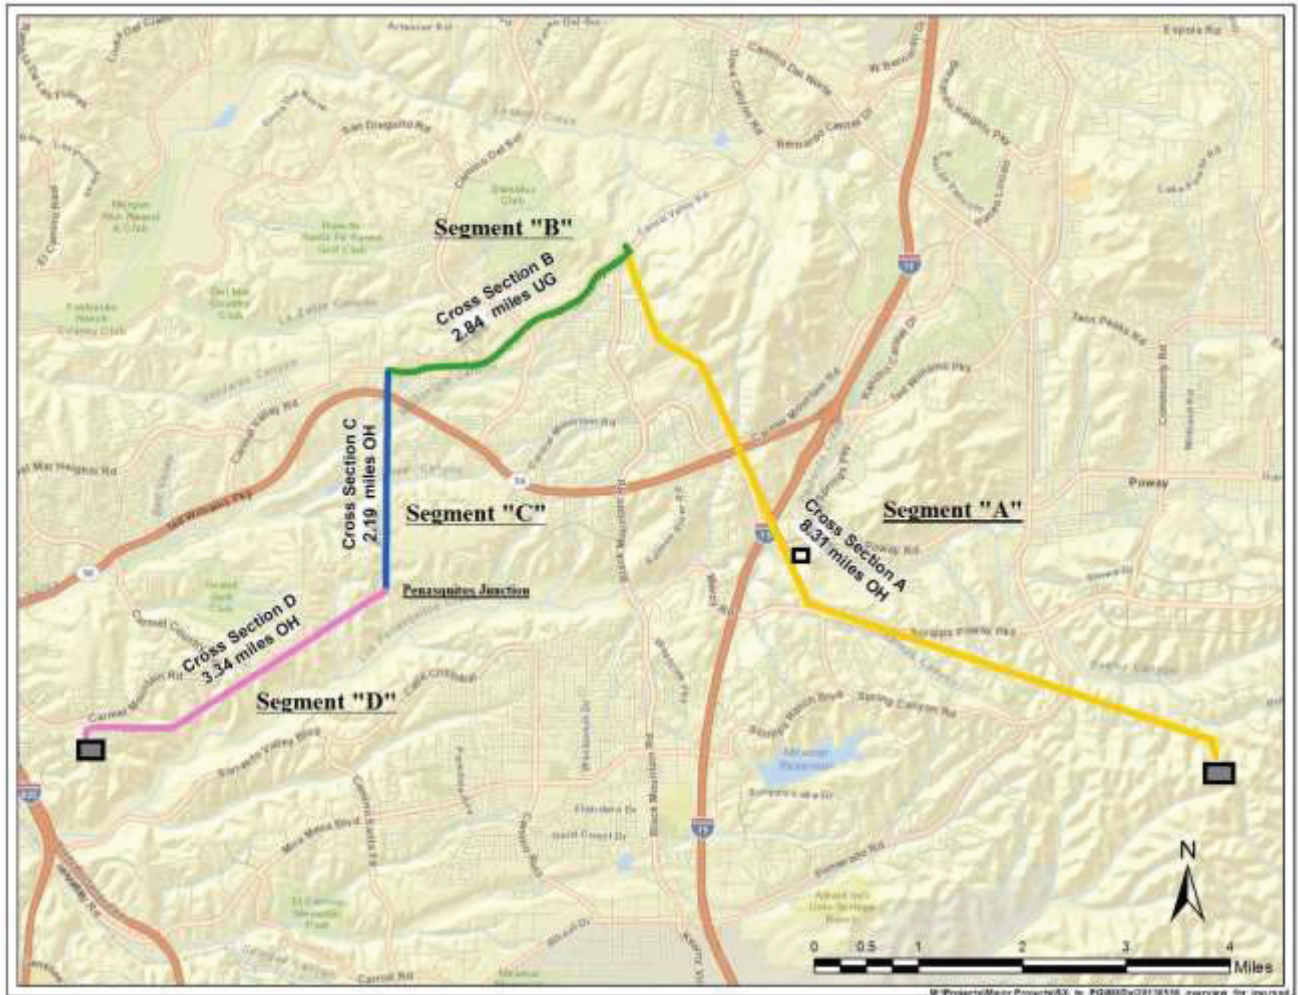

SEG D		Raise SAG Height					
Overhead - From SEG "D" easement to Penasquitas Substation							
Standard SAG Height			Initial Design SAG Height			Percent (%) Milligauss Reduction	
North	South		North	South		North	South
9.6	135.7		9.5	135.9		1%	0%

- Land Use = Residential, Undeveloped Open Space
- Length = approx. 3.34 miles
- Right-of-Way = 300 ft.
- Make SAG similar to existing SAG height to avoid visual or aesthetic concerns
- See “**Appendix 1 – Segment D**” attached for location.

Appendix 1

Proposed Project

Segment Map

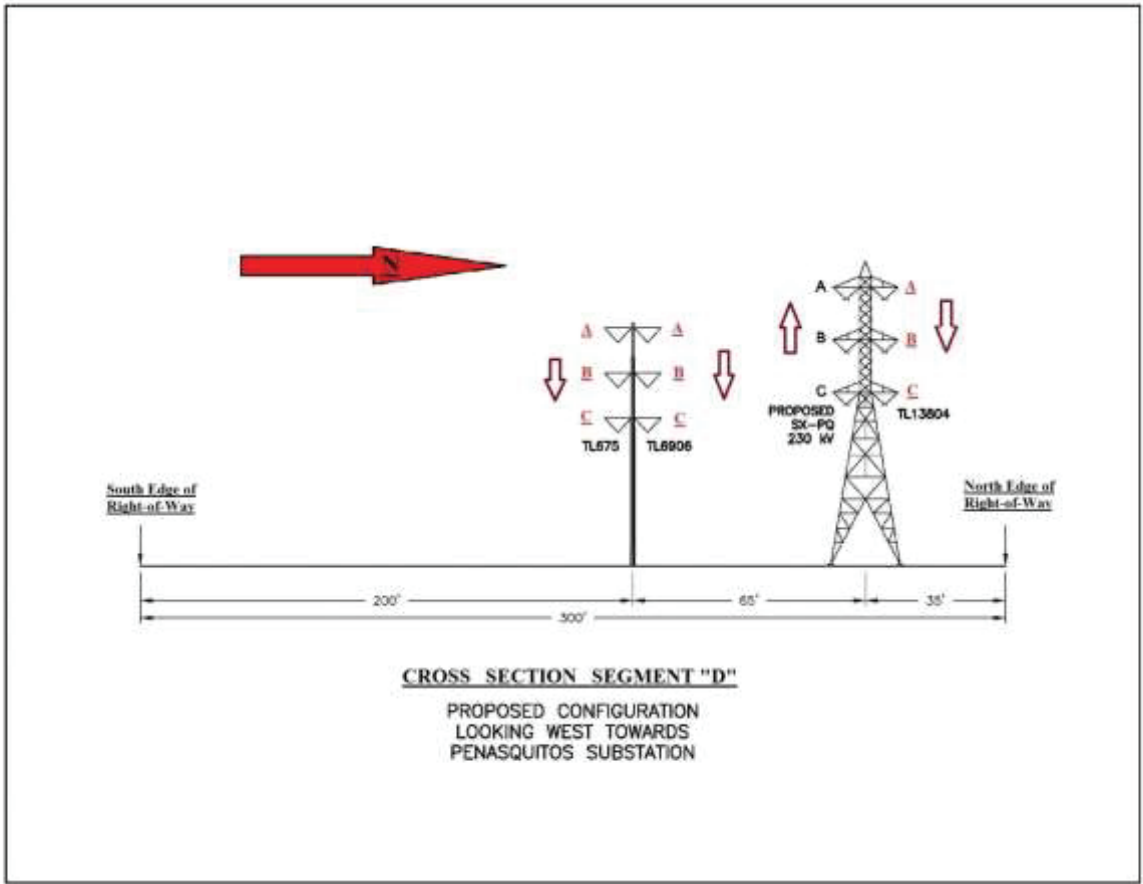

Approximate Location:	Within overhead easement, Sycamore Substation north to Carmel Valley Rd.
Transmission Circuits:	TL 13820, TL 13811, TL 23051, TL 6920, TL 230XX
Land Use:	Schools, Residential, Undeveloped Open Space
Length:	8.31 mi.
Right-of-Way Width:	200 ft.

Approximate Location: Transmission Circuits: Land Use: Length: Right-of-Way Width:	Underground within franchise of Carmel Valley Rd. TL 230XX split phase Daycare Center, Residential, Undeveloped Open Space 2.84 mi. 130 ft. average (120 ft. – 170 ft.)
--	---

Approximate Location: From Carmel Valley Rd. to Peñasquitos Junction
 Transmission Circuits: TL 13804, TL 230XX, TL 23004
 Land Use: Residential, Undeveloped Open Space
 Length: 2.19 mi.
 Right-of-Way Width: 100 ft.

Approximate Location:	From Peñasquitos Junction to Peñasquitos Substation
Transmission Circuits:	TL 675, TL 6906, TL 230XX, TL 13804
Land Use:	Residential, Undeveloped Open Space
Length:	3.34 mi.
Right-of-Way Width:	300 ft.
