1                   **PREPARED DIRECT TESTIMONY**

2                   **OF**

3                   **SUSAN M. CLAFFEY**

4                   **CHAPTER 6**

5                   **I. INTRODUCTION**

6                   The purpose of my testimony is to present current rate design methodologies for  
7 residential, small commercial and agricultural rate classes, to present rate design  
8 proposals and implementation details that support San Diego Gas and Electric  
9 Company's (SDG&E) revenue allocation proposals, and to present rate change and  
10 customer bill exhibits. My testimony describes: (1) proposed revisions to distribution  
11 unit charges that will allow recovery of the allocated revenue requirement presented by  
12 SDG&E witness Parsons in Chapter 5, (2) proposed revisions to commodity unit charges  
13 to comport with the generation marginal cost study and revenue allocation proposals  
14 presented by SDG&E witness Parsons in Chapter 5, and (3) continued support for  
15 implementing the Assembly Bill (AB) 1X rate cap and recovering the resulting revenue  
16 shortfall through a separate non-bypassable charge presented by SDG&E witness Hansen  
17 in Chapter 2. The rate design proposals are designed to collect the total revenues  
18 proposed in SDG&E's General Rate Case (GRC) Phase 1, Application (A.) 06-12-009.  
19 The methods described in my testimony are consistent with the proposals described by  
20 SDG&E witness Hansen in Chapter 2.

21                   My testimony is organized as follows:

- 22                   • Current and Proposed Rate Design Methodologies (Section II)  
23                    ▪ Overview of Rate Design Proposals (Section A)

- Residential Rate Design Proposals (Section B)
  - Small Commercial Rate Design Proposals (Section C)
  - Agricultural Rate Design Proposals (Section D)
  - Miscellaneous Rate Proposals (Section E)
- Attachments (Section III)

## II. CURRENT AND PROPOSED RATE DESIGN METHODOLOGIES

### A. Overview of Rate Design Proposals

The components addressed in this proceeding are Distribution, Commodity, and the Rate Design Settlement Component (RDSC). The rate design proposals presented are designed to move SDG&E toward cost-based electric rate designs. SDG&E proposes to continue the use of RDSC – to be renamed Total Rate Adjustment Component (TRAC) for the residential class. The purpose of continuing the use of TRAC is to continue to provide the inverted rate structure and AB1X rate capping currently contained in the RDSC rates. Also, SDG&E proposes to redesign the Competition Transition Charge (CTC) for Medium and Large Commercial & Industrial customers, as proposed by SDG&E witness Borden in Chapter 7, resulting in reduced CTC rates for Residential, Small Commercial, Medium and Large Commercial & Industrial, and Agricultural classes.

### B. Residential Rate Design Proposals

#### 1. Distribution

Current residential distribution rates are calculated based on revenues allocated to the class according to their Equal Percent Marginal Cost (EPMC) share of the total authorized revenue requirement. All residential customers with the exception of EV-

1 TOU, EV-TOU-2, and EV-TOU-3 have baseline and non-baseline rates for energy use.  
2 The baseline rate is the same in summer and winter, but the non-baseline rate is  
3 differentiated by summer and winter. In addition, a share of the authorized revenue  
4 requirement for the California Solar Initiative (CSI) is added to residential distribution  
5 rates. The CSI rate, effective January 1, 2007, is calculated by applying revenue  
6 allocated to the class based on EPMC. Residential CARE rates are exempt by law from  
7 cost recovery for CSI. There is currently no Basic Service Fee for residential customers.

8 Proposed residential distribution rates have been adjusted to recover the revenue  
9 allocated to the class proposed in Chapter 5 by SDG&E witness Parsons. Schedules EV-  
10 TOU, EV-TOU-2, and EV-TOU-3 distribution rates are adjusted by the same percentage  
11 as the percentage change in allocated distribution revenues to the residential class. Any  
12 change to the revenues allocated to the class would lead to an adjustment to baseline and  
13 non-baseline distribution energy rates. For changes in revenue allocated to the residential  
14 class, SDG&E proposes to update residential rate schedules (DR, DR-LI, DM, DS, DT,  
15 DT-RV, DR-TOU/DR-TOU-DER) as follows: Baseline distribution energy unit charges  
16 are multiplied by a single factor, where the factor is derived such that the sum of the  
17 residential class revenues equal the allocated revenue requirement. This will ensure  
18 alignment with the proposed revenue allocation presented by SDG&E witness Parsons in  
19 Chapter 5. In this proceeding, SDG&E is proposing a change in the non-baseline  
20 distribution energy unit charges to remove the seasonal differential that currently exists in  
21 residential distribution rates. This change uses the average of the current summer and  
22 winter differential to create an annual non-baseline distribution energy unit charge. The

1 non-baseline differential is then added to the baseline distribution energy unit charge to  
2 obtain the non-baseline rate.

3 SDG&E is proposing no changes to Minimum Bills (under schedule DR, DR-LI,  
4 DM, DS, DT, and DT-RV), to the unit Discount Charges (under schedules DS and DT),  
5 or to Metering Charges (under schedule DR-TOU/DR-TOU-DER, EV-TOU, EV-TOU-2,  
6 EV-TOU-3). Present and proposed distribution rates are illustrated in Attachment SMC-  
7 3. Residential bill impacts are presented in Attachment SMC-14 and Attachment SMC-  
8 15.

9           2. Total Rate Adjustment Component (TRAC)

10 As described in the testimony of SDG&E witness Hansen in Chapter 2, SDG&E  
11 proposes to continue the RDSC component, renamed as TRAC, to mitigate rate  
12 fluctuations that occur from setting distribution and commodity rates at their cost-based  
13 levels, to pass through AB1X subsidies and cost recovery, and to provide the inverted  
14 tiered rate structure.

15 SDG&E proposes that the rate structure of TRAC correspond to the Total Utility  
16 Distribution Company (UDC) rate structure under each rate schedule. TRAC will  
17 continue to reduce residential rates up to 130% of baseline allowances in order to  
18 maintain the AB1X mandated residential rate freeze, and recover the cost of AB1X  
19 subsidies from residential rates applicable to usage in excess of 130% of baseline  
20 allowances. TRAC rates are designed to recover the revenues allocated to the residential  
21 class by SDG&E witness Parsons.

22 The current residential TRAC rates for up to 130% of baseline allowances (tiers 1  
23 and 2), are derived through residual calculation, based on the difference between the sum

1 of the proposed rate components (Commodity, Distribution, current Nuclear  
2 Decommissioning (ND), Public Purpose Programs (PPP), etc.), and the total AB1X  
3 capped rates that have been in effect since February 1, 2001. The TRAC rates for tiers 3,  
4, and 5 are a residual calculation to the rates and revenues recovered in tiers 1 and 2 so  
5 that the revenues from the credit in tiers 1 and 2 are then recovered in tiers 3, 4, and 5.

6 As discussed in the testimony of SDG&E witness Hansen in Chapter 2 at RWH-  
7 14 through RWH-16, the TRAC is consistent with SDG&E's AB1X Rate Freeze roll-off  
8 proposal. The proposed residential TRAC rates up to 130% of baseline allowances (tiers  
9 1 and 2), are derived through residual calculation, based on the difference between the  
10 sum of the proposed rate components (Commodity, Distribution, current Nuclear  
11 Decommissioning (ND), Public Purpose Programs (PPP), etc.), and the total AB1X  
12 capped rates that have been in effect since February 1, 2001, plus the adjustment for the  
13 rate freeze roll-off. The TRAC rates for tiers 3, and 4 are a residual calculation to the  
14 rates and revenues recovered in tiers 1 and 2 so that the reduced revenues from the credit  
15 in tiers 1 and 2 are then recovered in tiers 3, and 4.

16 For DR-LI customers (customers that qualify for the CARE program), TRAC is  
17 currently adjusting total rates to maintain AB1X rate levels for tiers 1 and 2. For tiers 3,  
18 4, and 5, TRAC is maintaining the settled differential from the 2005 Rate Design  
19 Window (RDW) settlement, approved in Decision (D.) 05-12-003. SDG&E is proposing  
20 to adjust the TRAC rates for tiers 3, and 4, to maintain rate levels consistent with DR  
21 excluding the difference in distribution caused by CSI.

1

2           3. Commodity

3       For schedules DR, DR-LI, DM, DS, DT, DT-RV, EV-TOU, EV-TOU-2, and EV-  
4       TOU-3, schedule EECC (Electric Energy Commodity Cost) energy unit charges have  
5       been set at their adjusted EPMC cost-based levels proposed by SDG&E witness Parsons  
6       in Chapter 5, Attachment JSP5-2. SDG&E proposes to maintain the current single-tier  
7       residential commodity rate structure by utilizing the TRAC rate component to maintain  
8       appropriate AB1X rate capping. Currently residential commodity rates for EV-TOU,  
9       EV-TOU-2, and EV-TOU-3 differ only by time of use (TOU) period. SDG&E is  
10      proposing to implement a seasonal EV-TOU, EV-TOU-2, and EV-TOU-3 commodity  
11      rate in addition to the TOU periods to continue to move toward cost based rate designs.

12      For Schedules EECC, DR-TOU, DR-TOU-DER, residential commodity rates  
13      differ only by season and TOU period. For schedules DR-TOU and DR-TOU-DER,  
14      schedule EECC energy unit charges have been set at their adjusted EPMC cost-based  
15      levels proposed in Chapter 5, Attachment JSP5-2, by SDG&E witness Parsons. SDG&E  
16      proposes to maintain the current single-tier residential commodity rate structure,  
17      differentiated by TOU period, by utilizing the TRAC rate component to maintain  
18      appropriate AB1X rate capping. Present and proposed commodity rates for all schedules  
19      are illustrated in Attachment SMC-7.

20           4. Miscellaneous

21       Resolution E-3907, approved on January 13, 2005, adopted SDG&E's proposal to  
22       extend AB1X rate protection to non-residential customers taking service under Schedule  
23       E-LI (Expanded CARE) retroactive to April 11, 2004. The AB1X rate protection is

1 currently provided to Expanded CARE customers by reducing their commodity rates  
2 (EECC rates for Schedule E-LI) to the average commodity rates paid by residential  
3 CARE customers. In this proceeding SDG&E is proposing that the AB1X capping  
4 continue to be applied through commodity rates for Expanded CARE customers. In  
5 addition, SDG&E is proposing seasonal commodity rates for Expanded CARE  
6 customers.

7           **5.       Schedule DR SES**

8           Schedule DR SES is a new rate schedule proposed by SDG&E to provide TOU  
9 pricing to residential customers that install a solar energy system (SES) and where  
10 incentives for the SES are provided through what is commonly referred to as the CSI.

11          Schedule DR SES is open only to residential customers that install a SES to serve  
12 their residence. Service under Schedule DR SES is optional for residential customers  
13 with an SES prior to the date that Schedule DR SES becomes effective. Service under  
14 Schedule DR SES is mandatory for all residential customers that install a SES on or after  
15 the date that Schedule DR SES becomes effective.

16          As discussed in witness Hansen's testimony, Chapter 2, pursuant to the legislation  
17 commonly referred to as Senate Bill 1 (SB1) that became effective January 1, 2007,  
18 SDG&E proposes that Schedule DR SES rates will not be subject to the mandatory rate  
19 freeze on residential usage up to 130% of baseline usage, or what is commonly referred  
20 to as the AB1X rate freeze. By approving Schedule DR SES as exempt from AB1X, the  
21 correct price signals are sent to residential solar customers because the price signals will  
22 reflect the cost of power during peak periods instead of through the accumulation of  
23 kWhs over the course of a billing period, and the peak price signals will reflect the

1 marginal capacity and energy costs for providing power rather than the subsidy resulting  
2 from the AB1X rate freeze that results in increasing tier rates. Under the AB1X structure  
3 the 5 increasing tier rates theoretically indicate to customers who use larger amounts of  
4 power that once they exceed a certain threshold in the billing cycle, that it suddenly costs  
5 more to consume an additional kWh, but this does not reflect how system costs are  
6 incurred. If summer heat waves and the resulting increase in demand for power always  
7 occurred during the latter phase of a customer's billing cycle, then the increasing tier  
8 rates might be appropriate price signals for customers. However, the latter is unlikely to  
9 happen and when it does occur it is just by coincidence. Likewise, since many customers  
10 are on different billing cycles, different price signals are sent for the same system wide  
11 demand under the 5 tier structure.

12 Commodity costs for Schedule DR SES are calculated in the same manner as for  
13 Schedule DR but with the costs segmented for the TOU periods and by season. The  
14 methodology is sponsored in the testimony of SDG&E witness Parsons in Chapter 4.  
15 Schedule DR determinants are employed because SDG&E currently does not forecast  
16 determinants for residential solar usage in designing rates. For simplicity in designing  
17 Schedule DR SES and given that the target for the service is the entire residential class of  
18 customers, it is reasonable to use Schedule DR determinants. Energy costs are  
19 determined in the same manner as for Schedule DR and allocated to the selected TOU  
20 periods as sponsored in the testimony of SDG&E witness Parsons in Chapter 4. The  
21 seasonal and time variant differences in the Schedule DR SES commodity prices are  
22 determined primarily by the capacity cost calculations and the selection of TOU periods.

1      The TOU periods for Schedule DR SES are as set forth below:

	Summer	Winter
Peak: Weekdays only	11 A.M. – 6 P.M.	N/A
Semi-Peak: Weekdays only	6 A.M.-10 A.M. & 6 P.M.-10 P.M.	6 A.M. – 6 P.M.
Off-Peak:	Weekdays all hours that are not peak and semi-peak. Weekends and Holidays all hours.	Weekdays all hours that are not peak and semi-peak. Weekends and Holidays all hours.

2

3      The summer peak period is the same as the SDG&E system peak period. A semi-  
4 peak period is added to the summer to reflect that a SES may not produce output  
5 throughout the day in a manner that mimics the SDG&E system peak. The selection of  
6 the TOU summer periods is intended to provide additional benefits (in terms of economic  
7 feasibility or solar margins) to the operation of the SES while still corresponding to peak  
8 related costs on the SDG&E system.

9      In the top 300 hour analysis sponsored in the testimony of SDG&E witness  
10 Parsons in Chapter 4, used to determine capacity costs, there are no hours within the  
11 winter months for the residential class and thus zero capacity costs are allocated to the  
12 winter TOU rates for Schedule DR SES. SDG&E's winter system peak occurs during the  
13 period of 5-8 P.M., which offers little benefit to a residential customer with a SES. Given  
14 that a SES may produce output during the hours 6 A.M. – 6 P.M. during the winter  
15 months, it is reasonable to use this time period and refer to it as a semi-peak period for  
16 the winter months. The primary rationale for selecting the TOU period for the winter  
17 season is the hours during the day that a SES is likely to produce power.

18      B.      Small Commercial Rate Design Proposals

19            1.      Distribution

1       Small commercial distribution rates for Schedules A, A-TC, and A-TOU currently  
2 recover the revenue allocated to the class using a basic service fee and an energy charge.  
3 SDG&E is not proposing any structural changes to the small commercial distribution  
4 rates for Schedules A, A-TC, and A-TOU. SDG&E is proposing a Basic Service Fee  
5 increase of twenty percent for the small commercial distribution rate Schedules A, A-TC,  
6 and A-TOU as shown on Attachment SMC-13. Proposed small commercial distribution  
7 rates have been adjusted to recover the revenue allocated to the class proposed in Chapter  
8 by SDG&E witness Parsons. Distribution energy unit charges are multiplied by a  
9 single factor, such that that sum of the small commercial class revenues equals the  
10 proposed allocated revenue requirement. Present and proposed distribution rates are  
11 illustrated in Attachment SMC-4. Small commercial bill impacts are presented in  
12 Attachment SMC-16.

13              2.       Commodity

14       Small commercial commodity rates for Schedules A and A-TC currently recover  
15 the revenue allocated to the class using an energy charge. In this proceeding, SDG&E  
16 small commercial commodity rates for Schedules A and A-TC have been set at their  
17 adjusted EPMC rate levels proposed in Chapter 5 by witness Parsons. Schedule EECC  
18 energy charges for Schedule A currently reflect levelized EPMC rate levels, by season  
19 and by voltage level. In this proceeding, SDG&E is proposing a seasonal commodity rate  
20 consistent with SDG&E's continued move toward cost-based electric rates. Schedule  
21 EECC energy charges for Schedule A-TC currently reflect an EPMC rate level on an  
22 annual basis. Schedule EECC energy charges for Schedule A-TOU currently are non-  
23 seasonal rates adjusted for voltage level with on-peak rate mitigation similar to AL-TOU.

1 SDG&E is proposing to implement a seasonal commodity rate for Schedule EECC, A-TC  
2 and A-TOU consistent with SDG&E's continued move toward cost-based electric rates.  
3 Present and proposed commodity rates for all schedules are illustrated in Attachment  
4 SMC-7.

5 C. Agricultural Rate Design Proposals

6 1. Distribution

7 Agricultural distribution rates have been adjusted to recover the revenue allocated  
8 to the class proposed in Chapter 5 by SDG&E witness Parsons. SDG&E is proposing a  
9 Basic Service Fee increase of twenty percent for Schedule PA as shown in Attachment  
10 SMC-13. No other rate changes are proposed for Schedule PA. Present distribution  
11 energy unit charges are adjusted based on a factor that is derived such that the sum of the  
12 agricultural class revenues equal the proposed allocated revenue requirement. Present  
13 and proposed distribution rates are illustrated in Attachment SMC-3.

14 2. Commodity

15 Agricultural commodity rates have been set at their adjusted EPMC rate level  
16 proposed in Chapter 5 by SDG&E witness Parsons. Schedule EECC energy charges for  
17 Schedule PA currently reflects an EPMC rate level on an annual basis. In this  
18 proceeding, SDG&E is proposing to implement a seasonal commodity rate consistent  
19 with EECC energy charges for Schedule A. Present and proposed commodity rates for  
20 all schedules are illustrated in Attachment SMC-7.

21 D. Miscellaneous Rate Design Proposals

22 Schedule UM was filed by Advice Letter 1780-E-A and approved by Resolution  
23 E-3998 effective June 15, 2006. This rate schedule provides customers with the

1 opportunity to take service from SDG&E without the use of the meter. Instead of  
2 metering the load a fuse is required to be installed to limit the amount of current that the  
3 customer may draw. The customer is billed a Fixed Energy Charge plus a Basic Service  
4 Fee for each installation. The Fixed Energy Charge is determined based on the maximum  
5 kWh that can flow through the fuse multiplied by the energy rates from Schedule A.  
6 SDG&E filed Schedule UM with its Basic Service Fee set at the same level as Schedule  
7 A. In this proceeding SDG&E is introducing new marginal costs and has had the time to  
8 make sure that it developed the appropriate marginal costs to support an adjustment to the  
9 Basic Service Fee for Schedule UM.

10 Customers on Schedule UM cause SDG&E to incur different costs than customers  
11 on Schedule A in that (1) SDG&E does not need to install and maintain a meter and (2)  
12 SDG&E doesn't have to read a meter. In SDG&E witness Parsons marginal cost analysis  
13 he has determined that the adjusted metering and meter reading costs associated with a  
14 Schedule A customer are \$10.92/month. SDG&E proposes that the Schedule UM Basic  
15 Service Fee be set equal to the Basic Service Fee on Schedule A minus \$1.54/month as  
16 shown on Attachment SMC-13.

17

1 | **VI. QUALIFICATIONS OF SUSAN M. CLAFFEY**

2 | My name is Susan Claffey. My business address is 8330 Century Park Court, San  
3 | Diego, California, 92123-1530.

4 | I am employed as a Regulatory Economic Advisor in the Regulatory Affairs  
5 | department for San Diego Gas & Electric Company. My primary responsibilities include  
6 | analytical support for rate design, cost allocation, and tariff language proposals prepared  
7 | in regulatory rate filings and exhibits related to electric proceedings before the California  
8 | Public Utilities Commission (“CPUC” or “Commission”).

9 | I received a Bachelor of Science degree in Business Administration with  
10 | emphasis in Accounting from San Diego State University. I passed all four parts of the  
11 | Uniform CPA Exam. From 1985 to March 2004, I held various positions at San Diego  
12 | Gas and Electric Company in customer service, billing, and in cost accounting. In cost  
13 | accounting I was responsible for maintaining property records and was responsible for  
14 | designing portions of the rate-base model used in the 2004 Cost of Service filing. In  
15 | March 2004 I assumed my current position. During the past two and a half years I have  
16 | performed analysis for the purpose of preparing advice letters, applications and testimony  
17 | on proceedings before this Commission as well as Federal Energy Regulatory  
18 | Commission (“FERC”) matters.
