2 **SHARED SERVICES AND SHARED ASSETS BILLING POLICIES AND PROCESS**

3 **I. INTRODUCTION**

4 **A. Summary of Proposals**

5 I sponsor Test Year (“TY”) 2016 Shared Services Policy and Shared Assets Process testimony
6 for San Diego Gas & Electric Company (“SDG&E”). Shared services are activities permitted by the
7 Affiliate Transaction Rules decision, D.97-12-88, that are performed by SDG&E departments that are
8 designated as utility Shared Services departments (i.e., functional area) for the benefit of (i) SDG&E
9 or Southern California Gas Company (“SoCalGas”), (ii) Sempra Energy Corporate Center (“Corporate
10 Center”), and/or (iii) any unregulated subsidiaries. Shared Assets are assets that are on the financial
11 records of one utility, but also benefit other Sempra Energy affiliates.

12 The first section of this testimony: 1) describes SDG&E’s policy concerning the recovery of
13 Shared Services costs in this TY 2016 General Rate Case (“GRC”); 2) explains the Shared Services
14 billing process; and 3) summarizes the Shared Services book expenses for each utility. This testimony
15 serves as a resource to all Shared Services witnesses who are sponsoring Shared Services costs in their
16 testimony. The second section of this testimony presents an overview of the Shared Asset billing
17 process between SDG&E and the other Sempra Energy affiliates. This testimony includes examples of
18 the shared asset process and a list of proposed new future shared assets.

19 **B. Support To/From Other Witnesses**

20 In addition to sponsoring Shared Services costs, I also provide business or policy justification
21 for the following functional areas.

TABLE MAD-USS-1

<u>Chapter Description Exhibit & Witness List</u>		
Functional Area	SCG/SDG&E Exhibit	SCG/SDG&E Witness
Customer Service Field & Meter Reading	SCG-10/ SDG&E-13	Ms. Sara Franke

3 **II. SHARED SERVICE BILLINGS**4 **A. Overview of Shared Services Cost Presentation in This GRC**5 **1. Policy**

6 SoCalGas and SDG&E (the “utilities”) have the same policy for Shared Services billing.

7 Pursuant to this policy, which complies with D.97-12-88, shared services costs that are incurred by
8 one utility on behalf of the other utility, and/or on behalf of Sempra Energy or any of its unregulated
9 subsidiaries, are allocated and billed to those companies receiving services. The ratepayers of the
10 utility providing a Shared Service are not to subsidize the costs that are incurred in supporting the
11 other utility.

12 **2. Shared Versus Non-Shared Services**

13 For purposes of this GRC, Shared Services are activities performed by a utility’s Shared
14 Services Department (i.e., functional area) for the benefit of (i) SDG&E or SoCalGas, (ii) Corporate
15 Center, and/or (iii) any unregulated subsidiaries.¹ The utility providing Shared Services allocates and
16 bills incurred costs to the entity or entities receiving those services. “Non-Shared Services” are
17 activities that are performed by a utility solely for its own benefit. As such, Non-Shared Services
18 costs stay within the utility. Corporate Center provides certain services to the utilities and to other
19 subsidiaries. For purposes of the GRC, the utility treats costs for services received from Corporate
20 Center as Non-Shared Services costs, consistent with any other outside vendor costs incurred by the

¹ Where Shared Services costs are being shown as allocated out to Corporate Center, those costs will ultimately be allocated to SoCalGas, SDG&E, and the unregulated affiliates, in accordance with the Corporate Center reallocation methodology, which is described in Section C of this testimony.

1 utility. This is an important concept to understand when reading the testimonies of all the Shared
2 Services witnesses because only shared services are allocated and billed to those companies receiving
3 support.

4 **3. Changes from the Prior GRC**

5 For the TY 2016 GRC, the utilities are presenting Shared Services costs differently than in the
6 last TY 2012 GRC. Shared Services will use the ‘100% incurred’ view, rather than the ‘booked
7 expense’ view. This presentation of cost is consistent with the cost witnesses’ testimonies and shows
8 the costs incurred by the company rather than the costs booked by SDG&E.

9 **B. Shared Services Billing Process**

10 **1. Overview**

11 Each Shared Services functional area at SDG&E is responsible for determining the proper
12 allocation of its Shared Services costs to the appropriate entity or entities receiving the services. The
13 Shared Services billing process ensures: (1) sharing of services is recognized via a formal billing
14 process, (2) services are billed at fully-loaded cost,² and (3) supplemental loaders³ for applicable non-
15 regulated entities are applied to the billings. Due to the Shared Services billing process, ratepayers do
16 not subsidize costs that are incurred in support of another entity. However, to provide a complete
17 picture of Shared Services allocations and billing, those costs are presented to demonstrate that the
18 utilities are properly excluding those costs from book expense.

19 **2. Allocation of Shared Services Costs**

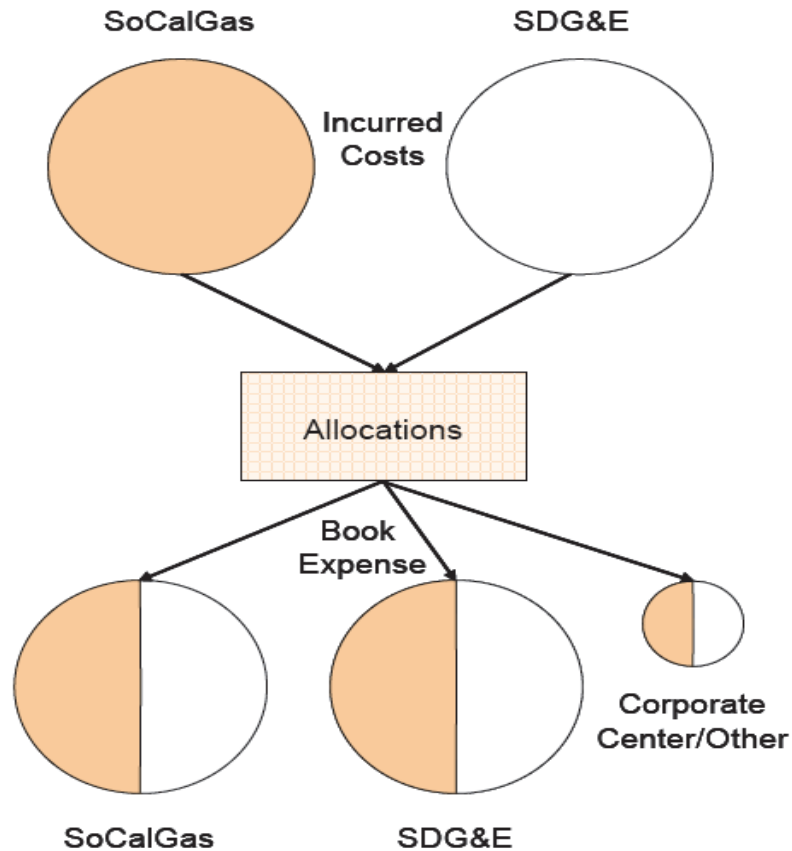

20 To facilitate proper billing of Shared Services costs to the entity or entities receiving a utility-
21 provided Shared Service, SDG&E first allocates those costs to the appropriate entity or entities, then
22 bills those costs out to the appropriate entity or entities.

23 The following chart illustrates, at a high level, how Shared Services costs are allocated:

² “Fully-loaded cost” means the direct cost of good or service plus all applicable indirect charges and overheads, as directed per D.97-12-88.

³ Pursuant to Rule V.H.5 of the CPUC’s Affiliate Transaction Rules, charges to Corporate Center and/or any of the unregulated affiliates will be calculated at fully-loaded cost, plus a premium on direct labor.

Shared Services Allocation Process

1

2

3

4

5

6

7

8

9

10

There are two primary allocation methods for allocating Shared Services costs: (1) direct allocation and (2) percentage allocation. Each is discussed below.

3. Direct Allocation

Direct allocation is used for incurred costs that can be charged directly to an entity or entities receiving the benefit of a Shared Service. When direct allocation applies, managers at the cost center⁴ level specifically identify and directly allocate a Shared Services activity. If certain Shared Services are billed on a direct allocation method, the Affiliate Billing and Costing (“ABC”)⁵ organization will open specific billing orders so that related costs can be captured directly and billed to the appropriate affiliates.

⁴ The term “cost center” refers to the lowest level of organizational grouping within functions at SoCalGas and SDG&E.

⁵ The ABC organization provides services such as (i) guidance and support to the Shared Services functional areas on Shared Services billing requirements, (ii) maintaining the system allocation percentages for all shared O&M costs allocated from the cost centers in the SAP accounting system, and (ii) ensuring proper system coding for the application of appropriate overheads.

4. Percentage Allocation

Percentage Allocation is used for costs associated with activities that cannot be directly allocated. Most Shared Services costs are allocated under a percentage allocation method and are charged to the entity or entities receiving a Shared Service based on percentages derived under two types of analyses: (a) causal/beneficial or (b) multi-factor.

If Shared Services are billed via percentage allocation method, the Shared Services managers submit allocation percentages for each entity that receives charges from a utility for Shared Services rendered to the ABC organization. The ABC organization then inputs the allocation percentages into the Systems Applications and Products (“SAP”) accounting system, where they are processed and the resulting allocations billed as part of the month-end closing procedures. The allocation percentages are reviewed annually or more frequently when there are material changes to the Shared Services organization’s business condition. This review is the responsibility of the Shared Services functional areas. In addition, updates and retroactive adjustments are processed, as appropriate, to re-align the billing percentages when necessary.

(a) Causal-Beneficial

When costs cannot be directly allocated, they are charged using a Causal-Beneficial method, which is based on a “cost driver” such as Local Area Network Identification (“LAN ID”) count for Information Technology (“IT”). Causal-Beneficial methods are the most common basis for allocations by Shared Services organizations.

(b) Multi-factor

A four-factor analysis is performed for functions that cannot be appropriately defined by a single causal-beneficial cost driver. The Multi-Factor weights four factors: revenue, gross plant and investments, operating expenses, and full-time employees/equivalents (“FTEs”).

C. Shared Services Billing Process

1. Compiling a Cost Center’s Shared Services Forecast

SDG&E performs the following steps to forecast Shared Services costs for each cost center.

Step 1. The managers for the various utility Shared Services organizations forecast their direct costs⁶ by cost center as:

- Directly Retained;
- Directly Allocated; or
- Amounts Subject to Percent Allocation

⁶ Direct costs are defined as the specific labor and/or non-labor costs of each work activity.

1 Directly Retained costs represent costs incurred solely for a utility's own benefit, and therefore
2 these costs would be retained at that utility and not allocated out. Examples of Directly Retained costs
3 are outreach charges incurred by SDG&E to promote SDG&E-only products and services.

4 Directly Allocated costs represent costs incurred for special projects specifically for the benefit
5 of another affiliate, and therefore are directly charged to that affiliate.

6 Amounts Subject to Percentage Allocation costs represent Shared Services costs incurred for
7 Shared Services provided by one utility for the benefit of other entities (e.g. SDG&E for the benefit of
8 SoCalGas, Corporate Center and unregulated affiliates) and are allocated to entities based on their
9 share of the services received. Most of the Shared Services costs fall into this category.

10 **Step 2.** The Directly Retained, Directly Allocated and Amounts Subject to Percent Allocation
11 added to calculate the cost center's 100% level or Incurred Costs. The Shared Services cost center
12 forecast is presented in base year 2013 dollars and classified into labor, non-labor and non-standard
13 escalated costs,⁷ as applicable. A more detailed discussion is included in my work papers, Ex.
14 SDG&E-26_MDiancin_USS Policy_WP.

15 **Step 3.** With respect to Amounts Subject to Percentage Allocation, the managers determine by
16 cost center the allocation percentage to apply to each entity related to those costs.

17 **Step 4.** The allocation percentages derived in Step 3 above are applied to those costs to arrive
18 at costs allocable to each entity, except the utility providing the Shared Services. After all allocations
19 to the benefitting entities are made, the remaining costs, if any, are allocated to the utility providing
20 the Shared Services. These remaining costs are then treated in the same manner as Directly Retained
21 costs.

22 **Step 5.** All three types of costs (Directly Allocated, Directly Retained, Amounts Subject to
23 Percentage Allocation) are included to arrive at the following totals:

24 (i) Total Allocated amounts per entity, computed as the Directly Allocated
25 amounts plus the Amount Allocated via Percentage Allocation. This total is
26 presented at the entity level (e.g., SDG&E allocations to SoCalGas, Corporate
27 Center, and/or unregulated affiliates).

28 (ii) Total Retained amounts for each utility, computed as the Directly Retained
29 amounts plus the remaining dollars retained at the utility once Amounts Subject to
30 Percentage Allocation are allocated out to the other entities. This total can also be

⁷ Non-standard escalated costs are non-labor O&M expense estimates that are not subjected to escalation rates and are presented in nominal dollars.

1 derived by taking the 100% level forecast and subtracting the Total Allocated
2 amount, as computed in (i) above.

3 Table MAD-USS-2 below illustrates the preparation of the forecasting process described
4 above.

5 [Remainder of page intentionally left blank]

TABLE MAD-USS-2

40							
41							
42							
43	Notes:						
44	(a) 100% Level Forecast = Sum of the Directly Retained, Directly Allocated and the Amount Subject to % Allocation. The						
45	total cost center costs prior to any allocations out.						
46	(b) Directly Retained = Costs incurred solely for SCG's own benefit and are not billed out.						
47	(c) Directly Allocated = Costs incurred for special projects benefiting a special affiliate and directly charged to the affiliate.						
48	(d) Amount Subject to % Allocation = Routine, on-going shared service costs incurred for SCG, SECC, unregulated						
49	affiliates and SDG&E itself.						
50	(e) Allocation Percentages = Determined by the planners and applied to each benefiting affiliate.						
51	(f) Amount allocated via % Allocation = Amount allocated to each affiliate.						
52	(g) Unallocated Amount Retained = The amount retained at SCG from the Subject to % Allocation amount.						
53	(h) Total Allocated = Directly Allocated amount + the Amount Allocated via % Allocation.						
54	(i) Total Retained = Directly Retained amount + the Unallocated Amount Retained.						

1 **Step 6.** To calculate the Book Expense, Total Retained is combined with the Billed-In costs
2 from the other utility.

3 **2. Loading of Overheads**

4 Consistent with the CPUC’s Affiliate Transaction Rules,⁸ Total Allocated amounts (also
5 referred to as allocations-out costs) for Shared Services include:

- 6 • Standard labor and non-labor overhead loadings;
- 7 • Supplemental labor loader, where applicable (the supplemental labor loader is
8 not applied to billings to SoCalGas and SDG&E); and
- 9 • Indirect support overhead loader.

10 These overheads are discussed in detail later in the next section of this testimony. The
11 overhead loading process consists of applying overheads to the Total Allocated amounts to yield fully-
12 loaded Total Allocated amounts. Overheads are not loaded onto Total Retained amounts. Labor
13 overheads are applied to the labor costs, and non-labor overheads are applied to both the non-labor and
14 non-standard escalated costs. Supplemental labor loaders are applied to labor costs, and Indirect
15 support overhead is applied to labor, non-labor and non-standard escalated costs.

16 **3. Corporate Center Reallocation**

17 SDG&E allocates Shared Services to Corporate Center based on the direct support of the
18 Shared Services organizations to Corporate Center. However, since Corporate Center supports the
19 utilities and other unregulated affiliates, these support costs are then reallocated back to those entities.
20 To avoid inefficiencies associated with affiliates allocating these costs to Corporate Center and then
21 Corporate Center allocating them back to the affiliates, SDG&E implemented a process to reallocate
22 Corporate Center charges to the receiving affiliate “on behalf” of Corporate Center based on the same
23 allocation percentages that Corporate Center derived for its allocations. The Corporate Reallocation,
24 also known as Business Unit Charge Ups (“BUCU”), allocation percentages are included in the table
25 below and the details can be found in the work papers supporting the testimony of SDG&E Corporate
26 Center witness Peter Wall (Ex. SDG&E-20).

27

⁸ See D.97-12-088 : Affiliate Transaction Rules.

Table MAD-USS-3

Calculation for 2016 Forecast

D. Overheads

1. Types of Overheads

Overheads are applied to shared service billings to fully load the shared service cost. The following are the types of overheads applied to billings:

(a) Standard Labor Overheads

The standard labor overheads include:

- Payroll Tax;
- Variable Pay;⁹
- Workers’ Compensation (“Workers’ Comp”);
- Public Liability and Property Damage (“PLPD”); and
- Pension and Benefits (“P&B”).

These labor overheads represent additional indirect costs associated with salaries paid to employees and are loaded on internal labor and labor billed to other parties. The specific overhead rates that were applied to the shared service allocations-out costs in this GRC were developed using 2013 recorded data.

(i) Payroll Tax Overhead

The Payroll Tax overhead represents the SDG&E’s portion of required contributions to the State and Federal governments for State Unemployment Insurance, Federal Unemployment Insurance, and Federal Retirement and Medicare Insurance. The Payroll Tax rate applied to the allocations-out labor was provided by the Tax Department for use in this GRC. Further details on payroll taxes can be found in the testimony of SDG&E Tax witness Ragan Reeves (Ex. SDG&E-29).

⁹ Variable pay plans are commonly referred to as the Incentive Compensation Plan (“ICP”).

1 (ii) Variable Pay / ICP Overhead

2 The ICP overhead represents the variable pay plan costs paid to employees based on individual
3 employee and company performance as compared to pre-established goals. The ICP overhead rate
4 used in this GRC was applied to the total labor allocated to the affiliates. The ICP rate in this GRC
5 equals to the 2013 pool funding divided by the total 2013 non-union SDG&E labor. Further details on
6 ICP can be found in the testimony of SDG&E Compensation witness Debbie Robinson (Ex. SDG&E-
7 22).

8 (iii) Workers' Comp Overhead

9 The Workers' Comp overhead represents the cost of expected payments to employees for
10 work-related injuries, plus the cost of workers' compensation insurance premiums to cover claims
11 over a certain dollar amount. The Workers' Comp overhead rate used in this GRC was applied to the
12 total labor allocated out to the affiliates. The Workers' Comp rate in this GRC equals to the 2013 pool
13 funding divided by the total 2013 SDG&E labor. Further details on workers' compensation can be
14 found in the testimony of SDG&E Compensation witness Debbie Robinson (Ex. SDG&E-22).

15 (iv) PLPD Overhead

16 The PLPD overhead represents the cost of expected payments to third parties for liability and
17 property damage claims submitted to SDG&E, plus the cost of insurance premiums to cover claims
18 over a certain dollar limit. The PLPD overhead rate used in this GRC was applied to the total labor
19 allocated out to the affiliates. The PLPD rate in this GRC equals to the 2013 pool funding divided by
20 the total 2013 SDG&E labor. Further details on PLPD can be found in the testimony of SDG&E
21 Corporate Center-Insurance witness Katherine Carbon (Ex. SDG&E-21).

22 (v) P&B Overhead

23 The P&B overhead represents costs paid by SDG&E to provide employee benefits, such as
24 flex health benefit plans, employee pension contributions and expense, the company match portion of
25 contributions to the qualified retirement savings plan 401(k), and retiree health benefits. The P&B
26 overhead rate used in this GRC was applied to the total labor allocated out to the affiliates. The P&B
27 rate in this GRC application equals to the 2013 pool funding divided by the total 2013 SDG&E labor.
28 Further details on P&B can be found in the testimony of SDG&E Pension & PBOPs witness David
29 Sarkaria (Ex. SDG&E-23).

30 (vi) Vacation and Sick ("V&S")

31 The V&S overhead represents costs paid by SDG&E for the employees' non-productive time,
32 such as vacation and sick days, holidays and jury duty. For this GRC filing, V&S was forecasted as a
33 part of total direct labor instead of an indirect overhead loading. As a result, a V&S overhead

1 rate/factor was provided to the managers in order to gross up the productive labor. The V&S factor
2 used in this GRC filing was based on the 2013 historical rate.

3 **(b) Non-Labor Overheads**

4 The standard non-labor overheads consist solely of the Purchasing Overhead Rate. The
5 Purchasing overhead rate loads the costs related to the procurement activity in obtaining goods and
6 services for the organizations. The costs for any procurement activities benefiting the affiliates are
7 billed directly as part of the Shared Service billings. The Purchasing overhead rate used in this GRC
8 was applied to the non-labor charges (which generally represent purchased materials and services).
9 The Purchasing rate in this GRC equals to the 2013 pool funding divided by total 2013 SDG&E non-
10 labor charges.

11 **(c) Supplemental Labor Loader**

12 In addition to the standard labor loaders, a supplemental labor loader was applied to Shared
13 Services billed to Corporate Center and other unregulated affiliates. The applicable required loader
14 for these billings is 5% of fully-loaded labor. The supplemental labor overhead rate presented in
15 Tables MAD-USS-4 and Table MAD-USS-5 below reflects the required loading rate applied to direct
16 labor prior to any loading. This rate equates to the required loading rate of 5% on fully-loaded labor.

17 **(d) Indirect Support Overhead**

18 This indirect support is represented by the Affiliate Billing Administrative & General (“A&G”)
19 overhead. This overhead represents the cost of A&G support provided to all affiliate billings by
20 functional areas, such as Accounting and Human Resources. The Affiliate Billing A&G overhead
21 used in this GRC is applied to the total labor and non-labor allocations-out costs to the affiliates. The
22 Affiliate Billing A&G rate in this GRC equals to the 2013 pool funding divided by total 2013 labor
23 and non-labor costs billed to the affiliates.

24 **2. SoCalGas Overheads**

25 Composite overhead loading factors were developed based on 2013 recorded data and used to
26 calculate billed costs for applicable overheads for each affiliate. The 2016 loading factors are
27 presented in Table MAD-USS-4 below.

28 The use of an overhead rate based on recorded data in this GRC is a reasonable and fair
29 representation of TY 2016 loadings for shared service billings. There is no indication of stranded
30 costs or cross-subsidization at the utilities by using an overhead rate based on recorded data.

Table MAD-USS-4

2016 Composite Overhead Loading Factors for SCG			
	San Diego Gas & Electric Company	Sempra Energy Corporate Center	Unregulated Affiliates
Labor			
Standard	58.6%	58.6%	58.6%
Supplemental	-	7.9%	7.9%
Indirect Support	20.6%	20.6%	20.6%
Subtotal	79.2%	87.2%	87.2%
Non-Labor			
Standard Procurement	1.0%	1.0%	1.0%
Indirect Support	20.6%	20.6%	20.6%
Subtotal	21.6%	21.6%	21.6%

3. SDG&E Overheads

Composite overhead loading factors were developed based on 2013 recorded data and used to calculate billed costs for applicable overheads for each affiliate. The 2016 loading factors are presented in Table MAD-USS-5 below.

The use of an overhead rate based on recorded data in this GRC is a reasonable and fair representation of TY 2016 loadings for shared service billings. There is no indication of stranded costs or cross-subsidization at the utilities by using an overhead rate based on recorded data.

Table MAD-USS-5

2016 Composite Overhead Loading Factors for SDG&E			
	Southern California Gas Company	Sempra Energy Corporate Center	Unregulated Affiliates
Labor			
Standard	59.7%	59.7%	59.7%
Supplemental	-	8.0%	8.0%
Indirect Support	20.3%	20.3%	20.3%
Subtotal	80.0%	88.0%	88.0%
Non-Labor			
Standard Procurement	0.6%	0.6%	0.6%
Indirect Support	20.3%	20.3%	20.3%
Subtotal	20.9%	20.9%	20.9%

4. Overhead Credit

The Overhead credit is the total of all the overhead loadings that were applied to the Total Allocations amount (i.e., allocations-out costs). The overhead loadings were credited so as not to be counted for twice in SoCalGas' or SDG&E's revenue requirement. For example, SDG&E will reflect its P&B forecast costs at the 100% level. However, a portion of SDG&E's P&B costs that are related to SDG&E employees who provide Shared Services to other entities (SoCalGas, Corporate Center and other unregulated affiliates), are billed to those entities in the form of overhead loadings. This is so SDG&E ratepayers do not subsidize the portion of P&B costs related to services provided to other entities. As a result, a credit for SDG&E's P&B overhead loadings must be applied in the Results of Operation ("RO") model in order to reflect the proper request level for SDG&E's revenue requirement.

In contrast, the Payroll Tax and Supplemental Labor overhead loading was not considered an overhead credit to the RO model's O&M Summary. Unlike the other overhead loadings (e.g., P&B), the payroll taxes calculated in the Shared Service revenue requirement for SoCalGas and SDG&E were based on the Total Retained labor amount and not the 100% level labor forecast. Therefore, there is no need to credit the payroll tax overhead portion from the RO model for SoCalGas or SDG&E. The Supplemental Labor Loader was applied to Shared Services billed to Corporate Center and other unregulated affiliates. There was no forecasted cost related to this loader in the RO model. Therefore, it was also excluded from the overhead credit calculation.

E. Summary of Shared Services Costs

1. SoCalGas Forecasts

In the following section, Table MAD-USS-6, "SoCalGas Shared Services Summary (Direct Costs)" is presented by labor, non-labor and non-standard escalated and shows the details on the following amounts¹⁰, prior to overhead loadings:

- a) 100% level forecast by functional area - \$ 102,792;
- b) Allocations-out costs by functional area – \$ 15,258;
- c) Retained costs by functional area - \$ 87,534;
- d) Allocations-in costs by functional area - \$ 53,182; and
- e) Book Expense by functional area - \$ 140,716.

Table MAD-USS-7, "SoCalGas Overheads" shows the details on the following amounts, which are after overhead loadings:

- a) Allocations-out to SDG&E - \$ 23,517;

¹⁰ Presented in base year 2013 dollars and in thousands.

3 **III. SHARED ASSETS**4 **A. Shared Asset Policy Background**

5 Shared assets are assets that are on the financial records of one utility, but are also used
6 by other Sempra Energy affiliates. For SDG&E, this applies to assets owned and used by
7 SDG&E, which are also used by SoCalGas, Corporate Center and/or other Sempra Energy
8 affiliates. Assets that can be identified, quantified, valued and exclusively used by one entity are
9 not considered a shared asset. Assets that will be used by both utilities, (e.g., software
10 applications) will be considered shared assets. However, items such as a scanner, which will be
11 used exclusively by only one of the utilities will not be considered a shared asset and will be
12 recorded on the financial records for the specific utility.

1 SDG&E and SoCalGas established their Shared Asset Policy in 2002 which dictates how
2 shared assets are reflected in the financial records. Shared assets are recorded on the financial
3 records of the utility (owner) that receives the most service or use from the asset. For example,
4 an asset that is used at a rate of 60% by SoCalGas employees and 40% by SDG&E employees is
5 placed on the financial records of SoCalGas. For situations where utilization between the two
6 utilities is exactly 50%, the established treatment is to place such assets on SoCalGas' records.

7 The utility owning the shared asset bills the other companies using allocation
8 percentages, which are based on factors that reflect the usage level of the asset by the other
9 companies. These utilization factors vary depending upon the asset. For example, a software
10 project for a specific customer process may utilize the number of customers as the measure of
11 utilization, whereas, a software project that is used internally may rely upon a count of the
12 number of employees using the software.

13 These allocation percentages are reviewed annually and are adjusted as needed in
14 accordance with the Shared Asset Policy if there are material changes to the business activities.
15 This review is conducted by the organization responsible for the asset and is coordinated by the
16 ABC organization. If necessary, the allocation percentages change so each utility and affiliate is
17 charged the appropriate level of costs.

18 Once the asset is initially capitalized, it remains on the utility's records even though the
19 utilization factor may change in the future. This practice removes the undue administrative
20 burden and associated costs (such as incremental sales tax) caused by transferring the asset from
21 one utility to the other. Therefore, if an asset is originally placed on SDG&E's records but usage
22 of the asset subsequently declines below 50%, SDG&E nonetheless remains the owner of the
23 asset. Any additions to a shared asset are recorded on the owner's financial records where the
24 original asset is recorded.

25 **B. Shared Asset Billing**

26 SDG&E's shared assets consist primarily of facilities, computer hardware and software,
27 and communications (telecommunication infrastructure). SDG&E charges the Sempra Energy
28 affiliates for the use of these assets by developing a capital revenue requirement. This revenue
29 requirement is retained by SDG&E or billed to other entities according to the particular
30 allocation methodology chosen for each asset to distribute the costs.

1 When developing the revenue requirement, the shared assets are put into asset categories.
2 Assets listed in these categories include those that are currently in service, as well as the
3 forecasted additions as requested in this GRC proceeding through TY 2016. For SDG&E, the
4 shared assets are classified into the following categories:

- 5 • Land;
- 6 • Structures and Improvements;
- 7 • Computer Hardware;
- 8 • Computer Software – 5 year life;
- 9 • Common Communications; and
- 10 • Electric Communications.

11 For each asset category, an annual weighted-average rate base is calculated. A return on
12 rate base, state and federal income taxes, estimated depreciation expense, and property taxes are
13 derived from that information, resulting in a total revenue requirement. The Appendix to this
14 testimony provides further details for the shared asset rate base calculations. The various
15 revenue requirement components are determined and sponsored by other GRC witnesses.¹²

16 Once the billable charges (i.e., revenue requirements) for the asset categories are
17 determined, they are apportioned to the appropriate Sempra Energy affiliates using the allocation
18 percentages. As discussed earlier, the allocation percentages are based on utilization factors
19 developed specifically for each forecasted project by the sponsoring witness. The allocation
20 percentages have been weighted by the net book value or estimated project costs to develop
21 composite allocation percentages for the asset classes in the RO. For example, based on the
22 weighted calculations of the various projects, the structures and improvements category may end
23 up with an allocation of 57.55% retained by SDG&E, 41.18% allocated to SoCalGas, and 1.27%
24 allocated to other Sempra Energy affiliates. These percentages are used to determine the
25 amounts to be charged to the appropriate Sempra Energy affiliates.

26 When utility charges are billed to Corporate Center, the charges are then billed back to

¹² The total company weighted-average rate base is sponsored by SDG&E's Rate Base witness, Jesse Aragon in Ex. SDG&E-27. The calculation of return on rate base percentage is performed in the Results of Operations model and is sponsored by the SDG&E's Summary of Earnings witness, Khai Nguyen in Ex. SDG&E-36. The tax expenses are sponsored by the SDG&E's Taxes witness, Ragan Reeves in Ex. SDG&E-29. Depreciation rates are sponsored by the SDG&E's Depreciation witness, Bob Wiczorek in Ex. SDG&E-28.

1 the utilities and other Sempra Energy affiliates based on a set of allocation percentages
 2 determined by Corporate Center. This process is discussed in the testimony of Corporate Center
 3 witness Peter Wall (Ex. SDG&E-20). However, when developing the revenue requirement, a net
 4 billing process is used for shared asset expense allocations to Corporate Center.¹³ With the net
 5 billing process, the percentage allocation of shared asset charges billed to Corporate Center (that
 6 would then be re-allocated and billed out) is already incorporated within the percentage
 7 allocations to SoCalGas and Sempra Energy affiliates and retained by SDG&E. This eliminates
 8 a second iteration required in developing the revenue requirement. In order to reflect this
 9 activity for the purposes of filing the GRC, the weighted allocation percentages for each Sempra
 10 Energy affiliate are adjusted to reflect the chargeback of shared asset expenses from Corporate
 11 Center.

12 For example, prior to the net billing process, the allocation of structures and
 13 improvements was 4.63% allocated to Corporate Center, 39.51% allocated to SoCalGas, 55.82%
 14 retained by SDG&E, and 0.04% allocated to the Sempra Energy non-regulated affiliates. With
 15 the net billing process, accounting for the results of the Corporate Center charge back process,
 16 the allocations would be adjusted to 0% allocated to Corporate Center, 41.18% allocated to
 17 SoCalGas, 57.55% retained by SDG&E and 1.27% allocated to Sempra Energy non-regulated
 18 affiliates. Refer to Table SDG&E-MAD-1 below.

19 **Table SDG&E-MAD-1**
 20 **Example of Net Billing Process on Allocation Percentages**

	Corporate	SDGE	SCG	Non Reg's	Total
Allocation %	4.63%	55.82%	39.51%	0.04%	100.00%
	-4.63%	1.73%	1.67%	1.23%	0.00%
Net Allocation %	0.00%	57.55%	41.18%	1.27%	100.00%

21 This process effectively leaves a zero allocation of shared asset costs to Corporate Center,
 22 with the Corporate Center allocations spread among SDG&E (retained), SoCalGas, and the
 23 Sempra Energy non-regulated affiliates.
 24

25 [Remainder of page intentionally left blank]

¹³ This net billing process, also called BUCU process, is explained in Section C above.

1 Table SDG&E-MAD-2 reflects the summary of projected revenue requirements from the
 2 RO model related to shared assets by their asset category grouping for TY 2016.

3 **Table SDG&E-MAD-2**
 4 **Summary of Shared Asset Revenue Requirements**

2016	Weighted Average Rate Base	Billable Return	2016 Test Year (In Thousands)		Annual Deprec. Expense	Annual Property Tax	Total Billable Charges	Allocation \$	
			Return Grossed Up for FIT & SIT					SDG&E Retained	Total Billed
Common Land	1,145	89	151	0	16	166	103	63	
Common Structures & Improvements	64,981	5,062	8,543	6,536	900	15,978	12,755	3,223	
Common Computer Hardware	2,115	165	278	2,101	29	2,408	1,344	1,064	
Common Computer Software 5 Year	7,422	578	976	3,031	0	4,007	1,010	2,997	
Common Communications	3,021	235	397	982	42	1,421	690	731	
Electric Communications	381	30	50	151	5	206	177	29	
Total	79,065	6,159	10,394	12,800	992	24,186	16,080	8,107	

5
 6 The total amount billed to the Sempra Energy affiliates as noted above is reflected in the
 7 Miscellaneous Revenues testimony of SDG&E witness Michelle Somerville (Ex. SDG&E-34).

8 **C. Description of Shared Asset Categories**

9 **1. Land**

10 Shared land consists primarily of the property for the Rancho Bernardo Data Center. The
 11 revenue requirement for this asset is allocated based on the amount of data (bandwidth) used by
 12 the various companies. This category represents existing assets and does not include any future
 13 projects. The annual process of reviewing the allocation percentage is performed by the IT
 14 department.

15 **2. Structures and Improvements**

16 Shared structures and improvements consist primarily of “improvements” to the Century
 17 Park Facility and Rancho Bernardo. The allocations for the improvements to the Century Park
 18 Facility are based on space studies developed and performed by the SDG&E Facilities
 19 Management Department. The allocations for the improvements of the Rancho Bernardo Data
 20 Center are based on IT studies for Rancho Bernardo assets. These projects are sponsored by
 21 SDG&E’s Real Estate, Land & Facilities witness, Jim Seifert (see Ex. SDG&E-17). Please refer
 22 to Table SDG&E-MAD-3.

23 **3. Computer Hardware and Software**

24 Shared computer hardware and software consists of mainframe, servers, exchange
 25 (email), and SAP software, among others. Utilization measures for these various assets are
 26 tracked, ranging from number of users or customers to the amount of activity used (bandwidth)

1 for each company. The witness sponsoring the IT projects is Stephen Mikovits (see Ex.
2 SDG&E-19). Please refer to Table SDG&E-MAD-3.

3 **4. Communications**

4 Shared communication assets include telecommunication infrastructure and network
5 operations equipment. The allocation for these assets is based on the amount of usage by the end
6 users, for example bandwidth. This category represents existing assets and does not include any
7 future projects. The annual process of reviewing the allocation percentage is performed by the
8 IT department.

9 **5. Electric Communications**

10 Shared electric communication assets include telecommunication infrastructure and
11 network operations equipment that were recorded under an electric work order. The shared asset
12 allocations to SoCalGas are primarily the fiber optic communication line between Rancho
13 Bernardo and Monterey Park, whereas the allocations to the affiliate companies are primarily
14 related to the communication equipment at the Headquarters building in San Diego. This
15 category represents existing assets and does not include any future projects.

16 **D. Summary**

17 Table SDG&E-MAD-3 below reflects the forecasted shared asset projects for 2014 –
18 2016 with allocation percentages (prior to the netting of Corporate Center charge-back) and the
19 supporting witness.

20 [Remainder of page intentionally left blank]

Table SDG&E-MAD-4 below reflects the total miscellaneous revenue (allocated shared asset expenses to the Sempra Energy affiliates) for SDG&E for 2013 Recorded Year and TY 2016.

Table SDG&E-MAD-4

Shared Asset Miscellaneous Revenue (\$000's)		
2013 Recorded	2016 TY	Net Change
9,676	8,107	(1,570)

The decrease from 2013 recorded to TY 2016 is primarily attributable to fewer shared asset additions and quicker asset depreciation for assets with short life-span.

As discussed previously, each utility bills the other utility for the allocation of the revenue requirement for each asset category. Table SDG&E-MAD-5 reflects the Shared Asset expense allocation billed to SDG&E from SoCalGas for 2013 Recorded and TY 2016.

1 **Table SDG&E-MAD-5**

Shared Asset Expense Allocation from SCG (\$000's)		
2013 Recorded	2016 TY	Net Change
48,611	46,677	(1,934)

3 The main reason for the decrease is due to quicker Shared Asset Depreciation and Asset
4 Retirements and fewer new additions of Shared Assets. The list of projects is identified in my
5 SoCalGas Shared Services and Shared Assets Billings Policy and Processes Testimony (see Ex.
6 SCG-25, Table SCG-MAD-3). The calculation for the shared asset expense can be found in
7 Appendix MAD-A-1 to this testimony.

8 **IV. CONCLUSION**

9 This concludes my prepared direct testimony.

1 **V. WITNESS QUALIFICATIONS**

2 My name is Mark A. Diancin. My business address is 555 West Fifth Street, Los
3 Angeles, California 90013. My current position is the Senior Business Analyst in the Pipeline
4 Safety Enhancement Program group for SoCalGas. I was formally the Affiliate Billing and
5 Costing Principal Accountant for SoCalGas.

6 I received a Bachelor of Science from the University of California, Riverside in June
7 1999. I was initially employed by SoCalGas in July 2000 and have held various positions of
8 increasing responsibility in the Accounting and Finance areas of the company, including
9 Financial Planning and Financial Systems. My responsibilities have included participation
10 and/or supervision of SAP CO month-end closing, affiliate billing, overhead rate studies, and
11 SAP/Business Warehouse client support.

MAD-A-1

List of Commonly Used Acronyms

A&G: administrative and general
ABC: Affiliate Billing and Costing
BUCU: Business Unit Charge Ups
CC: Sempra Energy Corporate Center
CPUC: California Public Utilities Commission
FERC: Federal Energy Regulatory Commission
FTEs : full-time employees/equivalents
GRC: general rate case
IT: Information Technology
O&M: operations and maintenance
P&B: Pension and Benefits
PLPD: Public Liability and Property Damage
SAP: Systems Applications and Products
SCG or SoCalGas: Southern California Gas Company
SDG&E: San Diego Gas & Electric Company
Sempra: Sempra Energy
TY: Test year
Variable Pay: also known as incentive compensation plan
Workers' Comp: Workers' Compensation

DEFINITIONS

Shared Services Terms Defined

The following definitions are provided for terms used in this testimony as well as in the testimonies of the Shared Services witnesses for SoCalGas and SDG&E.

100% incurred view: all direct costs prior to any allocations out.

Adjusted-recorded costs: 2013 actual costs, adjusted as needed to reflect an appropriate base level of expenditures for the GRC.

Affiliates: business units within Sempra Energy, including SoCalGas and SDG&E, as well as Corporate Center, and all other non-utility wholly-owned Sempra Energy subsidiaries.

Allocations-in: see “Billed-in” below.

Allocations-out: costs billed from one utility to another or to Corporate Center/Other for Shared Services provided. Shared Services allocations are performed at the cost center level. Individual cost centers have specific, unique allocation methods described in detail within the testimony work papers.

Allocation methods: direct charges or percentage-driven allocations based on Causal/Beneficial drivers or Multi-Factors, which are applied to incurred costs to determine the amount billed from the utility providing a Shared Service to the receiving utility or other Sempra Energy affiliate benefiting from the activity.

Base year expenses: 2013 adjusted-recorded costs.

Billed-in: also referred to as Allocations-in, these are costs received by one utility, due to another utility’s allocations. Billed-in costs become a component of book expense.

Book expense: retained plus billed-in costs. Book expense is the final cost to each utility.

Cost centers: the lowest level organizational unit for which Shared Services costs are tracked and recorded.

Cost Driver: basis for which costs are allocated. Employee headcount is an example of a cost driver.

Direct costs: specific costs, labor and non-labor, for each work activity.

Fully-loaded costs: direct costs plus all applicable indirect charges and overheads. For example, in the process of billing the direct cost of non-union labor to an affiliate for Shared Services performed, overhead costs are added for payroll taxes, workers' compensation, pension and benefits, incentive compensation plan, and public liability and property damage insurance, resulting in fully-loaded costs.

Functional areas: organizational groupings within the utilities that provide services of a similar nature. Shared Services functional areas presented in this GRC are listed in subsection B below.

Incurred costs: operating costs incurred by a utility before Shared Services allocations, overhead loading, and escalation.

Non-Shared Services: activities provided by functional areas at one utility which benefit only the utility performing the activity, the costs of which do not need to be allocated and billed out to other entities. Non-Shared Services costs are costs incurred by a utility for its sole benefit, and may include labor costs and non-labor costs. Costs for services provided to the utility by Corporate Center are treated as Non-Shared Services costs by the utility, consistent with how outside vendor costs are treated.

Retained costs: incurred costs remaining at the utility where the costs were incurred, net of allocations.

Shared Services: activities performed by functional areas at one utility for the benefit of (i) the other utility, (ii) Corporate Center, and/or (iii) an unregulated affiliate. A utility providing Shared Services will allocate and bill its costs for providing those services to the entity or entities receiving the service. A utility receiving Shared Services from the other utility will include in its own book expense any costs allocated and billed to for the services received.

TY 2016: the year used in this GRC to establish base rates.

Work group: grouping of one or more cost centers with similar activities within a functional area.
