9

10

11

12

My testimony describes the resources San Diego Gas & Electric Company ("SDG&E") expects to use in calendar year 2011 to provide electric commodity service to its bundled service customers and the procurement costs that SDG&E expects to record in 2011 to the Energy Resource Recovery Account ("ERRA"). A summary of the proposed total 2011 ERRA revenue requirement is contained in the direct testimony of Yvonne M. Le Mieux.

13 Section II of my testimony describes the supply resources that SDG&E forecasts 14 will be utilized to meet SDG&E's bundled customer load in calendar year 2011. These 15 resources include SDG&E continuing obligations under various long-term power 16 purchase contracts including Public Utility Regulatory Policies Act ("PURPA") 17 contracts, contracts with conventional generators, contracts with renewable generators, 18 SDG&E-owned generation, including 20% of the San Onofre Nuclear Generating Station 19 ("SONGS"), and anticipated short-term market transactions. Section III of my testimony 20 quantifies the costs associated with the resources described in Section II along with other 21 electric procurement requirements that are recorded in ERRA, such as CAISO charges 22 and portfolio hedging costs. My statement of qualifications is found at the end of my testimony.

My testimony makes reference to the following, which are attachments located at the end of the testimony: <u>Attachment A</u>: 2011 ERRA Expense Forecast; <u>Attachment B</u>: Forecast Volumes by Resource Type for 2011; <u>Attachment C</u>: Detail of Long Term Competitive Transition Charge ("CTC") and Qualifying Facility Contract Expense Forecast; and <u>Attachment D</u>: Detail of Renewable Expense Forecast.

II.

#### 2011 FORECAST OF LOAD AND SUPPLY RESOURCES

On January 1, 2003, SDG&E resumed procurement of its Residual Net Short ("RNS") position and assumed operational control of various California Department of Water Resources ("CDWR") long-term contracts, which SDG&E dispatches along with its own supply resources as a single, integrated portfolio. The CDWR contracts allocated to SDG&E include bilateral "must take" contracts, as-available wind resource contracts and dispatchable resource contracts. Costs for these contracts are captured through CDWR's retail remittance rate. SDG&E-procures resources form a diverse portfolio that includes nuclear, renewable, Qualifying Facilities ("QFs") and dispatchable generation. Most of the costs for these resources are captured through the ERRA.

12 The results contained in this application were developed using the production cost 13 model ProSym from Global Energy Decisions, a Ventyx Company. SDG&E and CDWR 14 resources were modeled in ProSym, which produced generation forecasts for these 15 resources based on contract requirements and forecasts of 2011 natural gas and electric 16 prices. The price forecasts were based on a recent (September 1, 2010) assessment of 2011 market prices based on the average of forward prices over a 22-day period. In the 17 18 new CAISO market structure following implementation of MRTU on April 1, 2009, 19 SDG&E's bundled load requirements – primarily of energy and ancillary services 20 ("A/S") – are purchased from the CAISO Day-Ahead and Real-Time Markets ("DAM" 21 and "RTM") rather than directly supplied from SDG&E portfolio resources. Similarly, 22 the output from SDG&E's portfolio of resources is sold into the CAISO DAM and RTM 23 rather than directly scheduled to serve SDG&E's bundled load. SDG&E's ERRA 24 forecast for 2011 addresses this new market structure by separating the expected purchase 25 cost of energy and A/S for its bundled load from the expected sales revenue and supply cost of energy and A/S from its resource portfolio.

26

27

## 28

#### LOAD FORECAST

29 The forecast of SDG&E's 2011 bundled load requirement was derived from the 30 California Energy Commission's ("CEC's") statewide forecast published in September

251082

TC-2

1 2010. Using the CEC's forecast and adjusting for direct access load, SDG&E projected

that its bundled load for 2011 will be the formation. This forecast is
higher than SDG&E's forecasted bundled load for 2010 (control). SDG&E's A/S

obligations were forecasted to be 6% of load for operating reserves and 2.5% of load for
regulation capacity based on the CAISO's historical levels of procurement for these
products.

### PORTLAND GENERAL ELECTRIC-BOARDMAN

SDG&E has a long-term power purchase agreement with Portland General Electric ("PGE") for 15% of the output of the Boardman coal-fired power plant. SDG&E's current share of plant output is nominally 86 MW at the plant and 83 MW after transmission losses delivered to the CAISO grid at Malin. Based on its variable cost of delivery to CAISO of about \$16/MWh, the forecast supply of Boardman energy for 2011 is the cost of about \$16/MWh, the forecast for 2010 (

This contract contains curtailment provisions whereby SDG&E can reduce its schedule on an hourly basis. The implementation of MRTU allows SDG&E to bid in Boardman energy into the CAISO market at a price to ensure that SDG&E receives revenues sufficient to offset the delivery cost for Boardman. While the relatively low energy price suggests that the contract will be fully scheduled for most available hours,

<sup>&</sup>lt;sup>1</sup> Capacity ratings provided in this testimony are the maximum operating levels defined in the CAISO Resource Data Template for each resource.

economic bids may result in the amount of energy supplied by Boardman to the CAISO being lower than forecast.

27

1

2

### **QUALIFYING FACILITIES**

In 2011, SDG&E will have about 227 MW of capacity under contract with 12 QFs.<sup>2</sup> The five largest QF contracts account for 213 MW or 93% of total QF capacity. All QFs are located in the SDG&E service area except for the Yuma Cogeneration Associates plant ("YCA"), a 56.5 MW natural gas-fired plant in Arizona whose output is imported into the CAISO.

QF contracts are must-take resources. SDG&E is obligated to pay the contract price for all delivered QF generation and schedule it into the CAISO market, with the exception of limited price replacement rights in the YCA and Goal Line contracts. To the extent allowed in these contracts, SDG&E exercises these rights during low-priced hours to maximize ratepayer savings. Typically, these plants will choose to shut down during these hours to avoid operating at a loss. Accounting for these economic curtailments and forecast availability, the forecast of QF energy supply in 2011 is **10000000** (a decrease of **1000000** from the forecasted amount for 2010 **1000000**)]), reflecting the observed reduction in actual QF output during 2010 due to economic self-curtailment.

#### **RENEWABLE ENERGY CONTRACTS**

SDG&E procures renewable energy through competitive solicitations and bilateral agreements to meet the Renewable Portfolio Standard ("RPS")<sup>3</sup> established by Senate Bill ("SB") 1078, *et seq.*<sup>4</sup> The forecast of renewable energy supply from Commission-approved contracts for 2011 is 2,190 GWh, which includes 934 GWh of Renewable Energy Credits ("RECs") quantities that are delivered to SDG&E in conjunction with existing non-renewable imports. This forecast is an increase of 349 GWh from the forecast for 2010 (1,841 GWh).

<sup>&</sup>lt;sup>2</sup> The actual number of active QF contracts is over 50, but many of these QF resources only serve on-site load and do not deliver net energy to SDG&E. As a result, these are not included in the production cost model run. The 12 QFs referenced above deliver net energy to SDG&E and are modeled in ProSym. <sup>3</sup> Some renewable resources have QF contracts and also qualify to meet the Renewable Portfolio Standard. Those resources are reported in the QF sections of this testimony.

<sup>&</sup>lt;sup>4</sup> See e.g., D.03-06-071; D.04-07-029; D.05-07-039; D.06-10-019.

1 In addition to the renewable energy included in the forecast, SDG&E also expects 2 to receive the following in 2011 towards meeting its RPS target: 3 21 GWh of renewable energy under existing QF agreements. The quantity and 4 ERRA cost associated with these contracts was included under QFs for the 5 purposes of this testimony. 6 934 GWh of anticipated renewable energy credits from the various wind • 7 contracts. The renewable energy credits are delivered using physical deliveries of 8 energy that SDG&E has already accounted for in its 2011 forecast. However, 9 costs associated these renewable energy credits are incremental to ERRA and 10 were included in the ERRA cost forecast. 11 SDG&E did not include renewable energy quantities or costs under contract from 12 a large solar project in its 2011 forecast. Based on current information, energy deliveries 13 from this contract during 2011 appear unlikely. SDG&E also did not include renewable 14 energy quantities or costs associated with the Sustainable Communities PV program 15 because costs for this program are not charged to ERRA. 16 SDG&E continues to pursue new renewable energy resources to add to its 17 portfolio for 2011, which will increase ERRA-related quantities and costs. A detailed 18 table of the renewable contracts discussed above is provided in Attachment D. 19 20 **SDG&E-OWNED DISPATCHABLE GENERATION** 21 SDG&E owns the following power plants: the 565 MW Palomar Energy Center 22 ("Palomar") combined cycle power plant that commenced commercial operation in April 23 2006, the 48 MW Miramar Energy Facility ("MEF I") peaking combustion turbine that 24 commenced commercial operation in July 2005, and the second 48 MW Miramar peaker 25 ("MEF II") that commenced commercial operation in August 2009. These units are 26 dispatched for generation and A/S awards based on economic merit and SDG&E's

28 generation dispatched for energy rather than for A/S. The rationale for this approach is
29 that the CAISO co-optimizes market awards between energy and A/S based on the

requirements. For the 2011 forecast, SDG&E's dispatch model considered only

30 opportunity cost of capacity and, therefore, the economic benefit (and ERRA

31 contribution) of using capacity for generation is equivalent to using capacity for A/S.

251082

The forecasted generation for Palomar in 2011 is 1 , an increase of ). The forecasted generation for MEF 1 & 2 2 from the forecast for 2010 ( 3 in 2011 is , an increase of from the forecast for 2010 ( ). The significant increases in these forecasts reflect improved price modeling that used actual 4 5 CAISO day-ahead market prices under the new market design. More importantly, the 2011 forecasts better match the observed generation quantities achieved by these units 6 7 following MRTU implementation. 8 9 **SDG&E-CONTRACTED GENERATION** 10 SDG&E will have a number of generation units under contract in its resource 11 portfolio in 2011. SDG&E's Power Purchase Agreement ("PPA") for Otay Mesa Energy Center ("OMEC"), a combined-cycle plant, is expected to provide a significant quantity 12 13 of generation to the CAISO market. The primary benefit of the other contracts will be to 14 offset SDG&E's load requirements from a capacity standpoint. The larger of these 15 contracts are described below: 16 The OMEC tolling agreement between SDG&E and Calpine began in October 2009. OMEC is an air-cooled 2x1 combined cycled plant that provides up to 17 of 18 efficient, gas fired generation capacity. The forecasted generation from OMEC for 2011 is 19 , an increase of from the forecast for 2010 ). 20 The Orange Grove contract provides of peaking capacity and is 21 forecasted to generate during 2011. 22 The Wellhead contract provides of peaking capacity and is forecasted to 23 generate about during 2011. The difference in forecast between the Wellhead 24 and Orange Grove contracts is due primarily to a higher fuel transportation cost for 25 Wellhead. SDG&E's 2011 portfolio assumes a 26 27 This extension would the loss of 28 this capacity from the existing which will expire at the end of 2010. This 29 of generation in 2011. contract is forecasted to provide 30 31 251082

#### MARKET PURCHASES AND SURPLUS SALES

Under MRTU, quantities purchased from the CAISO for SDG&E's load are based on load schedules and economic bids. Quantities sold to the CAISO from SDG&E's resource portfolio are based on completely separate generation schedules and economic bids. Therefore, there is no requirement that load and generation quantities that clear the market must balance.

If in any hour, the quantity of SDG&E's bundled load requirements purchased from the CAISO is greater than SDG&E-controlled generation sold to the CAISO, the difference may be viewed as equivalent to a market purchase. If in any hour, the quantity of SDG&E's bundled load requirements purchased from the CAISO is less than SDG&Econtrolled generation sold to the CAISO, the difference may be viewed as equivalent to a market sale.

SDG&E forecasts that the quantity of equivalent market purchases will be in 2011, an increase of from the forecast for 2010 (from 0). This increase is due primarily to the expiration of the Bear Energy B&C DWR must-take contracts that will provide approximately 1,596 GWh in 2010. Likewise, the loss of this contract caused the forecasted quantity of market sales to decline by from 2010 (from 0).

#### **CDWR ALLOCATION**

CDWR contracts will supply an estimated **CDWR** energy to the CAISO in 2011, a decrease of **CDWR** from 2010's expected CDWR energy volumes (**CDWR**). This decrease is due to the expiration of the must-take contracts described above. SDG&E's resource portfolio will supply an estimated **CDWR** of energy to the CAISO in 2011 (excluding REC quantities), an increase of **CDWR** share of load is projected to be **CDWR** (less than the **CDWR**). For 2011, the CDWR share of load is projected to be **CDWR** (less than the **CDWR**), also due to the expiration of the musttake contracts.

#### III. 2011 FORECAST OF ERRA EXPENSES

Electric procurement expenses incurred by SDG&E to serve bundled load are recorded to the ERRA. These expenses include, but are not limited to, costs and revenues for energy and capacity cleared through the MRTU markets, power purchase contract costs, generation fuel costs, market energy purchase costs, CAISO charges, brokerage fees and hedging costs. Deviations between forecast and actual costs for any of these items will create variances between forecast and actual ERRA costs.

Expenses associated with CDWR resources, including contract costs, gas tolling expenses, and gas hedging expenses are recovered by CDWR through its retail remittance rate and not recorded as an ERRA expense. The ERRA balance may be impacted by CDWR resources, however. For example, lower-than-forecast generation from CDWR contracts would require additional supply from SDG&E's portfolio that is paid by ERRA funds.

SDG&E expects to incur \$778 million of ERRA costs in 2011, before FF&U costs (see Attachment A). This forecast is \$40 million less than the \$818 million forecast for 2010. The key drivers behind the decrease are lower prices for fuel and market purchases. These savings are offset by higher costs for capacity and renewable energy.

The remainder of this testimony will discuss the cost of specific ERRA items in more detail.

#### LOAD

Under MRTU, the CAISO supplies and sells all energy and A/S to SDG&E to meet SDG&E's bundled load requirement. Based on expected prices for energy and A/S, SDG&E expects to incur charges totaling for load requirements in 2011 from the CAISO.

#### **SUPPLY ISO REVENUES**

Under MRTU, all generation from SDG&E's resource portfolio is sold to the CAISO. Based on expected prices for energy, SDG&E expects to receive revenues totaling for generation produced in 2011. These revenues are largely offset

1	by costs incurred for generation fuel & variable O&M, contracted energy purchases and
2	generation capacity. These costs are described in more detail below.
3	
4	GENERATION FUEL & VARIABLE O&M
5	SONGS:
6	Only SONGS nuclear fuel expense and fuel carrying charges are booked to
7	ERRA. Other SONGS costs, such as O&M and capital addition, are recorded in the Non-
8	fuel Generation Balancing Account ("NGBA"). The projected ERRA expense for
9	SONGS nuclear fuel and carrying charge expenses for 2011 is
10	
11	PALOMAR, EL DORADO & MIRAMAR (fuel expenses that are recovered
12	through ERRA):
13	In 2011, the ERRA expense for generation fuel purchased by SDG&E for
14	Palomar, Miramar 1 & 2 and the to-be owned El Dorado plant is forecasted to be
15	. SDG&E expects that SDG&E will become the owner of El Dorado on October
16	1, 2011, per Decision 07-11-046. Capital and non-fuel operating costs for these plants
17	are recovered through the NGBA as required by D.05-08-005 and Resolution E-3896.
18	
19	CONTRACTED ENERGY PURCHASES
20	PGE BOARDMAN CONTRACT:
21	The costs incurred under the PGE Boardman long term PPA include energy,
22	capacity, transmission losses, and transmission capacity from the plant to the CAISO, and
23	include SDG&E's share of any capital additions to the unit. The contract energy
24	payment is based on an energy price ( ) which is applied to
25	SDG&E's share of the plant output. However, the high capacity payment for this
26	contract causes this contract to be a CTC contract; therefore the expense recorded to the
27	ERRA is determined by multiplying the forecast energy production by the proposed
28	market benchmark price of \$42.50/MWh. The 2011 ERRA expense for this contract is
29	projected to be
30	

3

4

5

6

7

8

9

10

11

12 13

14

15

#### **QUALIFYING FACILITIES:**

All QFs are under contract with SDG&E through as-available capacity or firm capacity PURPA contracts. These contracts include provisions for both energy and capacity payments. The energy payment is determined using the SDG&E Short-Run Avoided Cost ("SRAC") formula<sup>5</sup>. QF contracts are eligible for CTC recovery due to their high capacity payments. Like the PGE Boardman contract, the ERRA expenses for CTC QF contracts are based on delivered energy multiplied by the market benchmark price. Any costs, including capacity payments, greater than the market benchmark price are booked to the Transition Cost Balancing Account ("TCBA"). For the purposes of ERRA accounting, ERRA expenses for CTC QF contracts are recorded on Line 31 of Attachment C, "Qualifying Facilities (Up To Market)," and are forecast to be in 2011. Any gas hedging costs incurred to mitigate SRAC-priced QF contracts would also be recovered in ERRA, but those expenses are captured in Line 48 of Attachment A, "Hedging Costs." Attachment C details the breakdown of all the units discussed in this section and shows the associated costs, both ERRA and TCBA, and the forecast energy deliveries.

22

23

24

25

26

27

28

#### **RENEWABLE ENERGY CONTRACTS:**

SDG&E's renewable energy contracts usually contain an energy payment only and no capacity payment. There are some slight differences between renewable contracts regarding energy payments based on schedules or metered energy, and the treatment of CAISO imbalance charges, depending on the type of resource. In 2011, SDG&E's renewable energy portfolio will include a cost for the renewable energy credits described in Section II under "Renewable Energy Contracts." None of the renewable energy contracts in the SDG&E portfolio are CTC contracts. All costs associated with these contracts are booked as an ERRA expense and are forecast to be \$121 million for 2011. Attachment D details the renewable projects by fuel type, their costs and forecasted energy deliveries.

<sup>&</sup>lt;sup>5</sup> The derivation of the SRAC price for QF contracts is posted monthly on an SDG&E website (URL: http://www2.sdge.com/SRAC/).

#### OTHER PURCHASED POWER CONTRACTS:

SDG&E's forecast of total costs for non-renewable power purchase contracts in 2011 is **Contracts**. These costs cover capacity payments and variable generation costs for OMEC, Encina, Boardman, QFs and several peakers. The largest components in this category are capacity and generation costs for the OMEC unit, expected to be **Contracts**, and capacity and generation costs for **Contracts**, expected to be **Contracts**.

#### **INTER-SCHEDULING COORDINATOR TRADES ("ISTs"):**

Under MRTU, SDG&E may transact ISTs bilaterally with counterparties to hedge long or short positions. Under an IST purchase, SDG&E would pay the counterparty the contracted energy price and in return receive payment from the CAISO based on the MRTU market clearing price. Under an IST sale, SDG&E would receive payment from the counterparty based on the contracted energy price and in return pay to the CAISO the MRTU market clearing price. For IST purchases and sales, the payment to, or revenue from, the counterparty would be largely offset by the respective credit from, or payment to, the CAISO. Because ISTs are used as a hedge against unknown MRTU prices, SDG&E does not include a forecast of net cost or benefit from these transactions.

### 

#### **CAISO RELATED COSTS**

SDG&E forecasts CAISO grid management charges ("GMCs") that are allocated to load and resources, which include energy usage charges, energy transmission service charges, and reliability services costs. The forecast of these charges is based on historical data. SDG&E's forecast of these CAISO costs is expected to be the in 2011.

#### **URG HEDGING COSTS**

SDG&E's resource portfolio has substantial exposure to gas price volatility as a result of fuel requirements for its gas-fired resources as well as the gas price-based pricing formula for its QF contracts. To manage this exposure, SDG&E expects to continue its hedging activity, and to book the resulting hedging costs and any realized gains and losses from hedge transactions to ERRA. The current estimate of hedging costs for 2011 is **10000000**, calculated as the marked-to-market profit/loss of hedges

already in place plus expected broker fees. The profit/loss of these and future hedgesplaced will rise and fall with market prices. Therefore, the final cost or savings will notbe known until the settlement process has been completed for the hedge transactions.

SDG&E may also trade short-term financial power products to hedge its long or short position against potentially volatile MRTU market clearing prices. Similar to ISTs described above, SDG&E does not include a forecast of net cost or benefit from these power hedges due to the unpredictability of market prices relative to the price of the hedges.

#### **CONVERGENCE BIDS**

SDG&E has received authorization from the Commission to utilize convergence bids when the CAISO launches this product in February 2011<sup>6</sup>. As described in the request for authorization, SDG&E's primary use of convergence bids would be to hedge certain operational risks in the day-to-day management of its portfolio. Whether or not approval is granted, it is not possible to forecast the gains or losses associated with potential convergence bidding activity because of the unpredictable relationship between day-ahead and real-time prices. Therefore SDG&E did not forecast an ERRA revenue/charge for convergence bids.

#### **CONGESTION REVENUE RIGHTS**

The CAISO day-ahead market establishes a market clearing price (which may include a congestion charge component) at each price node ("Pnode"). If congestion occurs where a generator is located, the market clearing price will be lower at that Pnode and the CAISO will consequently pay a lower price for energy delivered there. If congestion occurs where a load is located, the market clearing price will be higher at that Pnode and the CAISO will consequently charge a higher price for load served there.

Market participants, including SDG&E, were allocated Congestion Revenue Rights ("CRRs") for which they can nominate source and sink Pnodes to match those in their portfolio. If congestion arises between the source and sink Pnodes, the CAISO will pay the market participant holding the CRR the congestion charges to offset the

1

<sup>3</sup> 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30

<sup>&</sup>lt;sup>6</sup> See D.10-12-034

<sup>251082</sup> 

1 congestion costs incurred. SDG&E expects its CRRs to generate revenues from the 2 CAISO to offset congestion costs incurred within its portfolio. However, expected 3 revenues were not forecast for the 2011 ERRA forecast because SDG&E assumed 4 congestion-free clearing prices to develop forecasts for load requirement costs and 5 generation revenues. A forecast of CRR revenues would have required SDG&E to 6 forecast offsetting market-congestion prices at various Pnodes over the 2011 period, 7 which would have introduced complexity and additional uncertainty into the forecast. 8 This concludes my direct testimony.

#### IV. QUALIFICATIONS

My name is Tony Choi. My business address is 8315 Century Park Court, San Diego, California, 92123-1548. I am currently employed by SDG&E as Market Operations Manager. My responsibilities include overseeing a staff of schedulers involved in scheduling and bidding the SDG&E bundled load portfolio of supply assets for the benefit of retail electric customers. This includes operational administration of CDWR contracts, transacting in the real-time wholesale market and managing scheduling activities in compliance with CAISO requirements. I assumed my current position in March 2007.

I hold a Bachelors degree in Chemical Engineering and a Masters degree in Business Administration from the University of California – Berkeley.

I previously managed the Electric Power and Generation Fuel trading desks for SDG&E, primarily managing day-ahead and forward dispatch and procurement of energy in compliance with least-cost dispatch. Prior to joining SDG&E in 2002, my experience included two years as a power plant engineer, four years as an energy trader and three years as a wholesale energy transaction structurer.

I have previously testified before the CPUC.

#### BEFORE THE PUBLIC UTILITIES COMMISSION OF THE STATE OF CALIFORNIA

#### DECLARATION OF TONY CHOI

#### A.10-10-001

Amended Application of San Diego Gas & Electric Company (U 902 E) For Adoption of its 2011 Energy Resource Recovery Account (ERRA) Forecast Revenue Requirement and Review of its Power Procurement Balancing Account

I, Tony Choi, do declare as follows:

1. I am a Market Operations Manager for San Diego Gas & Electric Company ("SDG&E"). I included my Prepared Direct Testimony ("Testimony") in support of SDG&E's January 14, 2011 Amended Application for Adoption of its 2011 Energy Resources Recovery Account (ERRA) Forecast Revenue Requirement and Review of its Power Procurement Balancing Account. Additionally, as Market Operations Manager, I am thoroughly familiar with the facts and representations in this declaration and if called upon to testify I could and would testify to the following based upon personal knowledge.

2. I am providing this Declaration to demonstrate that the confidential information ("Protected Information") in my Testimony falls within the scope of data provided confidential treatment in the IOU Matrix ("Matrix") attached to the Commission's Decision ("D.") 06-06-066 (the Phase I Confidentiality decision). Pursuant to the procedure set forth in D.08-04-023 for testimony in a formal proceeding, I am addressing each of the following five features of Ordering Paragraph 2 of D.06-06-066:

- that the material constitutes a particular type of data listed in the Matrix;
- the category or categories in the Matrix the data correspond to;
- that SDG&E is complying with the limitations on confidentiality specified in the Matrix for that type of data;
- that the information is not already public; and

• that the data cannot be aggregated, redacted, summarized, masked or otherwise protected in a way that allows partial disclosure.

3. The Protected Information contained in my testimony constitutes material, market sensitive, electric procurement-related information that is within the scope of Section 454.5(g) of the Public Utilities Code.<sup>1</sup> As such, the Protected Information is allowed confidential treatment in accordance with the Matrix, as follows:

- Page TC-3: redacted items on lines 2 through 3 are protected under Matrix category V.C and confidential for "the front three years"; redacted items on lines 12 through 13 are protected under Matrix category IV.A and confidential for three years; redacted items on line 23 are protected under Matrix category IV.E and confidential for three years
- Page TC-4: redacted items on lines 15 through 16 are protected under Matrix category IV.B and confidential for three years
- Page TC-6: redacted items on lines 1 through 3 are protected under Matrix category IV.A and confidential for three years; redacted items on lines 17 through 23 are protected under Matrix category IV.F and confidential for three years; redacted items on lines 26 through 29 are protected under Matrix category IV.F and confidential until January 1, 2013.
- Page TC-7: redacted items on lines 13 through 14 are protected under Matrix category IV.J and confidential for the "front three years"; redacted items on lines 17 through 18 are protected under Matrix category IV.K and confidential for the "front three years"; redacted items on lines 21 through 27 are protected under Matrix category V.G and confidential for the "front three years"
- Page TC-8: redacted items on lines 24 and 30 are protected under Matrix category II.B.1 and confidential for three years
- Page TC-9: redacted items on lines 9 and 14 are protected under Matrix category II.B.1 and confidential for three years; redacted items on lines 24 and 29 are protected under Matrix category II.B.4 and confidential for three years

<sup>&</sup>lt;sup>1</sup> In addition to the details addressed herein, SDG&E believes that the information being furnished in my Testimony is governed by Public Utilities Code Section 583 and General Order 66-C. Accordingly, SDG&E seeks confidential treatment of this data under those provisions, as applicable.

- Page TC-10: redacted item on line 11 is protected under Matrix category II.B.3 and confidential for three years
- Page TC-11: redacted items on lines 3 through 6, line 23 and line 31 are protected under Matrix category II.B.4 and confidential for three years
- <u>Attachment A</u>, spreadsheet "SDG&E 2011 ERRA Expenses" is protected under Matrix category XI and confidential for three years
- <u>Attachment B</u>, spreadsheet "SDG&E 2011 URG Delivery Volumes" is protected under Matrix category IV. Specifically, SONGS, Palomar, El Dorado and Miramar data are protected under Matrix category IV.A and confidential for three years; PGE-Boardman data are protected under Matrix category IV.E and for three years; QF data are protected under Matrix category IV.B and confidential for three years; Otay Mesa, Celerity, Kelco, Lake Hodges, Wellhead and Orange Grove data are protected under Matrix category IV.F and confidential for three years; Encina data are protected under Matrix category IV.F and confidential for three years; Encina data are protected under Matrix category IV.F and confidential until January 1, 2013Market Purchase data are protected under Matrix category IV.J and confidential for the "front three years"; Surplus Energy Sold data are protected under Matrix category IV.K and confidential for the "front three years"; Load Requirement data are protected under Matrix category V.C and confidential for the "front three years"
- <u>Attachment C</u>, spreadsheet "SDG&E 2011 Long-Term Power Purchase, CTC and Qualifying Facility Detail" is confidential and protected under Matrix categories IV.B and IV.E. Specifically, PGE-Boardman data are protected under Matrix category IV.E and confidential for the "front three years"; individual QF data are protected under Matrix category IV.B and confidential for the "front three years"; Long Term Power Purchase CTC data are protected under Matrix category II.B.4 and confidential for three years; CTC QF & Non CTC QF data are protected under Matrix category II.B.3 and confidential for three years; TCBA Expenses data are protected under matrix categories II.B.3 and II.B.4 and confidential for three years

4. I am not aware of any instances where the Protected Information has been disclosed to the public. To my knowledge, no party, including SDG&E, has publicly revealed any of the Protected Information.

5. I will comply with the limitations on confidentiality specified in the Matrix for the type of data that is provided herewith.

6. The Protected Information cannot be provided in a form that is aggregated, partially redacted, or summarized, masked or otherwise protected in a manner that would allow further disclosure of the data while still protecting confidential information.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

Executed this 13th day of January, 2011, at San Diego, California.

Tony Choi Market Operations Manager San Diego Gas & Electric Company
