Docket No. ER16-__-__

TO4 CYCLE 3 AUDIT ADJUSTMENTS REPORT

This Audit Adjustments Report (Report) explains the effect on the TO4 Cycle 3 Base Transmission Revenue Requirements (BTRR) of the Federal Energy Regulatory Commission's (Commission or FERC) Financial Audit of San Diego Gas & Electric Company (SDG&E) in Docket No. FA12-8-000 (Audit).¹ As discussed below, Staff identified 8 areas for adjustments. After addressing those areas, the Staff and SDG&E determined that a refund of approximately \$1.1 million was appropriate and that the refund adjustment would be reflected through the normal operation of the TO4 Formula.

I. BACKGROUND

The FERC audit commenced in November 2011 and was completed on June 10, 2014. Generally, the audit findings required accounting adjustments to: Plant, Pre Payments, Depreciation, Operation and Maintenance, and Administrative and General (A&G) expenses. The principal amounts for each of these categories were recorded in 2014 and therefore are included in SDG&E's 2014 Form 1.

These changes included revising and implementing procedures on the accounting for: a) Allowance for Funds Used During Construction; b) A&G Department expenses; c) Compromise Settlement Costs; d) Information Technology indirect expenses; e) Industry Association Dues and Lobbying Activities; f) Prepaid Rent Expense; g) Research, Development, and Demonstration Costs and (h) Cost Allocation Methodologies. The effect of these audit adjustments on the TO4 Cycle 3 BTRR is discussed below.

II. LISTING OF MATERIAL ACCOUNTING CHANGES DUE TO FERC AUDIT

FERC Audit staff identified 8 areas for adjustments. Most of these findings pertained to inconsistencies with the application of the Commission's accounting requirements under the

¹ See Letter Order, dated June 10, 2014.

FERC Uniform System of Accounts (USofA) and some with reporting within the FERC Form 1.

The accounting inconsistencies affected cost recoveries received from customers through the operation of SDG&E's various Transmission Owner (TO) Formula rate mechanisms, *i.e.*, TO2 Formula, TO3 Formula and TO4 Formula. A summary of the FERC Audit Staff's findings are as follows:

- A. Allowance For Funds Used During Construction (AFUDC)** - SDG&E's AFUDC accrual calculation had several deficiencies. As a result of these deficiencies, SDG&E improperly included costs in its transmission formula rate mechanism and recovered these costs through rates charged to transmission customers.
 - SDG&E included about \$30 million of contract retention amounts in the CWIP component of its AFUDC calculation for the Sunrise Powerlink Project, which resulted in a \$2.9 million over-accrual of AFUDC.² The inclusion of contract retention amounts also occurred in projects other than the Sunrise Powerlink Project.
 - SDG&E improperly accrued about \$240,000 of AFUDC on construction projects placed into service, suspended, cancelled, or interrupted based upon a small sample of work orders reviewed by audit staff.
 - SDG&E improperly accrued AFUDC on costs recorded to Accounts 121, Nonutility Property; 183, Preliminary Survey and Investigation Charges; and 186, Miscellaneous Deferred Debits. SDG&E included and recovered AFUDC accrued on amounts recorded in Account 183 from customers through its transmission formula rate mechanism, which totaled \$416,068.
- B. Accounting and Recovery of Administrative and General Department Costs** - SDG&E employed an accounting practice that improperly classified non-labor A&G department costs in Account 921 instead of properly including such costs in Accounts 426.1, 426.5, 923, and 930.2. This accounting practice may affect cost recoveries under SDG&E's transmission formula rate mechanism.
- C. Accounting and Recovery of Compromise Settlement Costs** - SDG&E incorrectly recorded payments for a compromise settlement resulting from an alleged discriminatory employment practice in an above-the-line operating expense account instead of a below-the-line non-operating expense account. As a

² SDG&E removed the \$2.9 million of over-accrual of AFUDC in SDG&E's TO3 Cycle 6 Supplemental Filing and subsequent Offer of Settlement (Docket No. ER12-2454).

result, SDG&E improperly recovered about \$33,000 of compromise settlement costs through its transmission formula rate mechanism from customers.

- D. *Information Technology Department Cost Centers*** - SDG&E improperly assigned indirect expenses from information technology department cost centers to various accounts using predetermined allocation factors. This accounting practice may affect cost recoveries under SDG&E's transmission formula rate mechanism.
- E. *Industry Association Dues and Lobbying Activities*** - SDG&E incorrectly accounted for company membership dues in Account 921, Office Supplies and Expenses, instead of Account 930.2, Miscellaneous General Expenses. Also, SDG&E did not properly assign the portion of American Gas Association membership dues representing lobbying activities to Account 426.4, Expenditures for Certain Civic, Political, and Related Activities.
- F. *Prepaid Rent Expense*** - SDG&E improperly accounted for rental expense prepayments in Account 567, Rents, when it should have recorded these expenses in Account 165, Prepayments. As a result, SDG&E did not accurately recognize rent expense on its books in the proper period.
- G. *Research, Development, and Demonstration Expenses*** - SDG&E did not use Account 188, Research, Development, and Demonstration (RD&D), to initially record the expenditures SDG&E incurred for RD&D. SDG&E also did not report all RD&D costs it incurred on the supporting schedule of the FERC Form 1, pages 352-353. This affected the transparency of the FERC Form 1 and the Commission's ability to use this RD&D information for its intended purposes.
- H. *Cost Allocation Methodologies*** - SDG&E's FERC Form 1 did not report allocation methods used to bill or receive charges from affiliated companies as required by Instruction No. 3 on page 429, Transactions with Associated (Affiliated) Companies. This affected the transparency of the FERC Form 1, which users rely upon for decision making purposes.

III. EFFECT OF AUDIT ADJUSTMENTS ON TO4 CYCLE 3 BTRR

A. Summary

The total incremental FERC Audit Adjustment including interest, related franchise fees and uncollectible charges to be refunded to retail customers is approximately (\$1.1) million (Vol. 4, Section B, FERC Audit Net Adjustment Summary for BK-1, Col. I, Line 14). The wholesale customers refund is approximately (\$1.0) million (Vol. 4, Section C, FERC Audit Net Adjustment Summary for BK-2, Col. F, Line 14). The difference in the refund amounts is due to an \$858K correction associated with Transmission Related Accumulated Deferred Income Taxes (ADIT) in the TO3 Cycle 6 Informational Filing. In the Supplemental Filing for TO3 Cycle 6 (Docket No. ER12-2454-000), Cost Statement AF was updated to reflect total ADIT of (\$182,780K) which is a difference of approximately \$858K from the Initial Filing of total ADIT of (\$183,638K). The update of total ADIT of (\$182,780K) was not carried over to BK-2 and caused total ADIT to be overstated by \$858K. As part of the derivation of the FERC Audit Adjustments, ADIT was correctly updated for the period TO3 Cycle 6 applicable to BK-2 which resulted in an incremental adjustment of \$117K in total Base Transmission Revenue Requirement, including interest and franchise fees.

B. Process

Volume 4 contains summaries of the FERC Audit Adjustments used to derive the refunds reflected in the TO4 Cycle 3 BK1 and BK2. The adjustments were made in each of the applicable True-Up Periods that handle these items from the previous TO2, TO3 and TO4, Cycle 2 Information Filings.

Section A is this FERC Audit Adjustment Report.

Section B summarizes the net overall retail FERC Audit Adjustments from each of the revised True-Up Cost of Service for each Informational Filings under the TO2, TO3 and TO4 formula. The summary shows the incremental BK-1 BTRR adjustments, interest, franchise fees and uncollectible totaling a net refund of (\$1.1) million.

Section C shows the wholesale net overall FERC Audit Adjustments from each of the revised True-Up Cost of Service for each Informational Filings under the TO2, TO3, and TO4 formula. The summary shows the incremental BK-2 BTRR adjustments, interest and franchise fees totaling a net refund of (\$1.0) million. The difference between the retail and wholesale refund is described above in the Summary - Section III.A. Page 2 of this section C is a summary detailing the high and low voltage allocations used to derive the high voltage and low voltage wholesale BTRR in (BK-2).

Section D shows the total retail summary adjustments refund of (\$1,869K) in the total column, line 33, of page 3 of 3. This amount is exclusive of the additional revenue that has to be added back for the TO4 Cycle 3 BTRR as described in Section G totaling \$758K.

Section E shows the total wholesale summary adjustments for a total refund of (\$1,751K) in the total column, line 31, of page 3 of 3. The difference between the retail summary adjustment in Section D and the wholesale summary adjustment in Section E of (\$117K) is due to the ADIT omission in TO3 Cycle 6 True-Up and interest and related franchise fees. An additional (\$1K) is included for uncollectible. This amount is exclusive of the additional revenue that has to be added back for the TO4 Cycle 3 BTRR as described in Section G totaling \$757K.

Section F shows the high voltage and low voltage allocation summary used to derive the high voltage and low voltage wholesale BTRR in (BK-2).

Section G shows the derivation of the additional BTRR to be added back to the TO4 Cycle 3 BTRR resulting from the FERC audit adjustments from October 2003 through December 2013 that were embedded in the 2014 FERC Form 1. The 2014 credit adjustments related to the transmission Operation and Maintenance (O&M), A&G, depreciation expense and the working capital effect for the O&M and A&G had to be added back to the 2014 BTRR to avoid refunding twice the refund amounts associated with the previous TO Formula True-Up Cycles that were derived separately but were also embedded in the TO4 Cycle 3 BTRR calculation. The result is a \$758K add-back for retail (Column C, line 37) and \$757K for wholesale (Column D, line 37). The difference is due to uncollectible expense, which does not apply in the derivation of the wholesale BTRR.

Section H summarizes the total incremental transmission related A&G adjustments showing all the individual labor ratio applied to each true-up cycles and the related incremental property insurance effect due to revisions in the transmission plant property insurance allocation factor from changes made to the transmission plant. This summary serves as a cross-check in the derivation of the incremental transmission related A&G adjustments from each of the TO True-Up Cycles.

Section I summarizes the total incremental transmission related property tax effect due to revisions in the transmission plant property tax allocation factor from changes made to the transmission plant. This summary serves as a cross-check in the derivation of the incremental transmission related property tax from each of the TO True-Up Cycles.

Section J shows the retail (BK-1) cumulative effect for all the incremental transmission rate base adjustments on the net plant revisions due to the AFUDC adjustments, working capital effect on materials, supplies and prepayments due to the revisions in the transmission plant allocation factor resulting from the plant changes, and on the transmission related working capital due to the incremental adjustments to O&M and A&G. This summary also serves as a cross-check in the derivation of the incremental transmission rate base adjustments which impact the BTRR return.

Section K shows the wholesale (BK-2) summary for all the cumulative effect on the incremental transmission rate base adjustments as well. This has a separate calculation from the BK-1 section above due to the inclusion of ADIT for BK-2, which was inadvertently omitted in the TO3 Cycle 6 Supplemental Filing. This summary also serves as a cross-check in the derivation of the incremental transmission rate base adjustments which impact the BTRR return.

C. Material Accounting Changes

Generally, SDG&E has made the following changes in accounting practices as a result of the FERC Financial Audit Docket No. FA 12-8-000:

1. AFUDC is not recorded on contract retention or accrual amounts in CWIP (107).
2. AFUDC is not recorded on projects in CWIP that have been suspended.
3. AFUDC is not recorded on projects in non-CWIP accounts.
4. Non-labor A&G costs previously recorded to Account 921 that do not meet the definition of Account 921 in the FERC USofA are recorded to the proper FERC account, primarily to Account 923.
5. Costs incurred for compromise settlements are recorded to account 426.5 or 426.3 as appropriate.

6. Information Technology costs are directly assigned to the proper FERC account instead of being allocated to multiple FERC accounts.
7. The lobbying portion of Industry Association dues are recorded to Account 426.4.
8. RD&D costs are initially recorded to Account 188 and then moved to the appropriate expense account.

(1) Proration Factor for the number of months in each True-Up period.

- (a) See Page 3 of 3, Col. I, Lines 15 and 31. In the Supplemental Filing for TO3 Cycle 6 (Docket No. ER12-2454-000), Cost Statement AF was updated to reflect total ADIT of (\$182,780K) which is a difference of approximately \$858K from the Initial Filing of total ADIT of (\$183,638K). The update of total ADIT of (\$182,780K) was not carried over to BK-2 and caused total ADIT to be overstated by \$858K. As part of the derivation of the FERC Audit Adjustments, ADIT was correctly updated for the period TO3 Cycle 6 applicable to BK-2 which resulted in an incremental adjustment of \$117K in total Base Transmission Revenue Requirement, including interest and franchise fees.

NOTE: This summary illustrates the prior period adjustments for October 2003 thru December 2013 that were recorded in the 2014 base period to correct the deficiencies noted in the FERC Audit Report (Docket No. FA12-8-000). These amounts are embedded in the 2014 FERC Form 1. In addition, the amounts are representative of Total Company and the September Posting and December 1 Cycle 3 Informational Filing will contain schedules showing only the portion of costs, and related interest, allocated to Electric Transmission.

1 Transmission Plant Allocation Factor in **BOLD** have changed due to revised transmission plant balances.

2 The prepaid rent adjustments started in Jan 2010 and are shown above in **BOLD**.

3 See Page 3 of 3, Col. I, Line 54. In the Supplemental Filing for TO3 Cycle 6 (Docket No. ER12-2454-000), Cost Statement AF was updated to reflect total ADIT of (\$182,780K) which is a difference of approximately \$858K from the Initial Filing of total ADIT of (\$183,638K). The update of total ADIT of (\$182,780K) was not carried over to BK-2 and caused total ADIT to be overstated by \$858K. As part of the derivation of the FERC Audit Adjustments, ADIT was correctly updated for the period TO3 Cycle 6 TU for BK-2 only in the transmission rate base as shown above.
